Ashford Division: The municipal borough and rural district of Tenterden, the municipal boroughs of Lydd and New Romney, the urban district of Ashford, the rural districts of East Ashford, Romney Marsh, and West Ashford;

Dover Division: The municipal boroughs of Deal, Dover, and Sandwich, the urban district of Walmer, the rural districts of Eastry and Dover;

Folkestone Division: The municipal boroughs of Folkestone and Hythe, the urban districts of Sandgate and Cheriton, the rural district of Elham;

the new Divisions to come into existence as from the date of publication of this notice, and the area of the Maidstone Division being modified accordingly.

ALFRED COX, *Medical Secretary.*

TABLE OF DATES.

Mar. 28, Mon.	Nomination papers available at Head Office for election of 24 members of Council by grouped Branches in British Isles; and 2 Public Health Service members of Council and 4 Representatives of Public Health Service in Representative Body.
April 6, Wed.	*Council* (afternoon).
April 7, Thurs.	*Council.*
April 23, Sat.	Annual Report of Council appears in SUPPLEMENT.
	Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members, for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 7, Sat.	Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.
May 10, Tues.	Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
May 14, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
	Publication in SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
	Last date for election of Representatives and Deputy Representatives.
May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members.
	Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m.
	Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh).
July 19, Tues.	*A.R.M.* (Edinburgh).
July 20, Wed.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
	Council (Edinburgh). Conference of Honorary Secretaries (Edinburgh).
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.
	Meetings of Sections, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BORDER COUNTIES BRANCH.—A general meeting of the Border Counties Branch will be held at the Dumfries and Galloway Royal Infirmary on Thursday, March 24th, at 3 p.m. Agenda: Major W. L. Forsyth, I.M.S.(ret.), bacteriologist to Dumfriesshire County Council, will describe "Laboratory methods"; a discussion on "Some common gastric disorders" will be introduced by Dr. P. Murray Kerr; Dr. J. D. Robson will show *x*-ray plates illustrating a series of these cases, and Dr. R. M. Glover will take up the surgical aspect; Dr. J. Ritchie (M.O.H. Dumfriesshire County Council) will give a short account of "The different food values of bread." At the conclusion of the meeting tea will be served by kind invitation of the President, Dr. P. Murray Kerr.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—A meeting of the Bournemouth Division will be held at St. Peter's Small Hall, Bournemouth, on Thursday, April 7th. Dr. Robert Hutchison will give a British Medical Association Lecture on "Diet in infancy and childhood."

ESSEX BRANCH: MID-ESSEX DIVISION.—The annual general meeting of the Mid-Essex Division will be held on Friday, March 25th, at the Bell Hotel, Chelmsford, at 3 p.m. Agenda: (1) Report of the year's work. (2) Election of officers for 1927; lantern slides will be shown by the chairman, Dr. R. H. Vercoe, on: (*a*) Vitamin deficiency diseases; (*b*) On the mountains of Tyrol.

FIFE BRANCH.—The annual meeting of the Fife Branch will be held at the Station Hotel, Kirkcaldy, on Thursday, March 31st, at 3 p.m. Agenda: Report of Branch Council; election of office-bearers and Branch Council; arrangements for clinical meetings for winter of 1927-28; business of Annual Representative Meeting; Annual Meeting of Association in Edinburgh—excursions to Fife; and Guarantee Fund. The last clinical meeting of the session will follow at 4 p.m., when Professor Price (Dundee) will give an address on congenital deformities. The annual dinner will be held at the same place at 5.30 p.m.

KENT BRANCH: TUNBRIDGE WELLS DIVISION.—A meeting of the Division will be held at the General Hospital, Tunbridge Wells, on Wednesday, March 23rd, at 8.30 p.m. Agenda: To elect representative and deputy representative to Annual Meeting in July at Edinburgh; medical charities; to discuss following resolution:

> That this meeting of medical practitioners views with considerable anxiety the steady encroachment on the work of general practitioners by whole-time medical officers of county and local authorities, and calls upon the British Medical Association to do all in its power strenuously to oppose all such encroachments when the interests of the public can be advanced by other methods.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The Divisional fancy dress dance will be held in the Great Hall of the British Medical Association House, Tavistock Square, W., on Thursday, March 24th, at 8.30 p.m. to 1.30 a.m. Le Saire's Band. Refreshments by Gunters, Ltd. Fancy dress optional; four prizes. A demonstration by professional dancers will be given during the evening. Tickets (8s. inclusive) can be obtained from Dr. G. Clark Trotter, 2, Tyndale Place, Islington; Dr. Harold Latham, 2, Hemingford Road, Barnsbury, and from the secretary, Dr. Worley, 43, De Beauvoir Road, N. Early application is requested.

METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.—A clinical meeting of the Hendon Division will be held at the Hendon Cottage Hospital, on Friday, March 25th, at 8.30 p.m. Mr. J. F. O'Malley, F.R.C.S. (surgeon to the Ear, Nose, and Throat Department, University College Hospital), will give an address on "Some recent advances in diseases of the ear, nose, and throat."

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—A clinical meeting of the Kensington Division will be held at St. Mary's Hospital, Paddington, W., on Wednesday, March 23rd, at 8.30 p.m.

METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.—At the meeting of the North Middlesex Division on March 30th Dr. G. W. H. French will read a paper on "Differential diagnosis of the acute abdomen."

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—A meeting of the South-West Essex Division will be held at the Walthamstow Hospital on Tuesday, March 29th, at 3.30 p.m. Dr. G. F. Still will give an address on "Vomiting in childhood."

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, March 25th, at 8.15 p.m. Mr. A. M. Webber, surgeon to the Nottingham Hospital, will give an address on "Observations on hysterectomies." Tea and coffee served at 8 p.m.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Tuesday, March 22nd, at 8.15 p.m. Agenda: Letters; report of Executive Committee; report of Ethical Committee.

OXFORD AND READING BRANCH: OXFORD DIVISION.—The second meeting of the year of the Oxford Division will be held at the Radcliffe Infirmary, Oxford, on Wednesday, March 23rd, at 2.45 p.m. Clinical cases from the wards will be shown.

SHROPSHIRE AND MID-WALES BRANCH.—A clinical meeting of the Shropshire and Mid-Wales Branch will be held at the Royal Salop Infirmary on Tuesday, March 22nd, at 3.15 p.m., when Dr. Louise McIlroy, professor of the Obstetrical and Gynaecological Unit, Royal Free Hospital, will give a British Medical Association Lecture on "Pregnancy complicating tumours of the uterus and adnexa." Tea will be provided by kind invitation of the President.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: NORTH GLAMORGAN AND BRECKNOCK DIVISION.—A meeting of the North Glamorgan and Brecknock Division will be held on Thursday, March 24th, when Dr. T. F. Cotton will deliver a British Medical Association Lecture on "Prognosis and treatment of heart disease."

STAFFORDSHIRE BRANCH: SOUTH STAFFORDSHIRE DIVISION.—At the meeting of the South Staffordshire Division to be held on Tuesday, March 29th, Dr. T. Watts Eden, F.R.C.P., will give a British Medical Association Lecture on "Prevention and treatment of eclampsia."

STIRLING BRANCH.—A clinical meeting of the Stirling Branch will be held on Wednesday, March 23rd, at 3.30 p.m., within the Falkirk and District Infirmary, when Mr. Tennant (Glasgow) will read a paper on colopexy, and cases will be shown. Tea will be served after the meeting.

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.—A meeting of the South Suffolk Division will be held at the Crown and Anchor Hotel on Friday, March 25th, at 3.30 p.m. Agenda: Business arising out

of minutes; British Medical Association monthly circular; Dr. H. N. Baron will open a discussion on "The need for closer co-operation between hospital staffs and general practitioners.

SURREY BRANCH: CROYDON DIVISION.—A meeting of the Croydon Division will be held at the Croydon General Hospital on Tuesday, March 22nd, at 8.30 p.m., when Professor Verney will read a paper on "Pharmacology and practice."

SURREY BRANCH: GUILDFORD DIVISION.—Professor Hobday will open a discussion at a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, on clean milk, to be held on May 19th. Further particulars will be announced later.

SUSSEX BRANCH: BRIGHTON DIVISION.—A meeting of the Brighton Division will be held at the Queen's Road Dispensary on Monday, March 21st, at 8.30 p.m. Agenda: Election of representatives in *Representative Body*; report on result of deputation to the Brighton Council on Midwives and Maternity Homes By-laws; consider request of the Science Committee of the Association that every Division should send a letter to the member or members of Parliament connected with the Division explaining the attitude of the profession in relation to the Dogs' Protection Bill, and asking them to vote against this bill on its second reading (it will be moved at the meeting that the Division decline to adopt this procedure); Dr. C. Fraser will call attention to the certificates in connexion with application for ophthalmic benefit, and Dr. Louis Dods to the continual exploitation of the profession; annual report of Division; *report on the cancer campaign in Sussex*; *Charities Committee* of the Division.

SUSSEX BRANCH: HASTINGS DIVISION.—The next meeting of the Hastings Division will be held at the Queen's Hotel, Hastings, on Tuesday, April 5th, at 8.15 p.m. Coffee will be served immediately before the meeting. Mr. H. E. Marsh, L.D.S., will read a paper on "Collaboration of medical and dental practitioner in dental practice." The meeting is being held jointly with the local section of the British Dental Association, and all members of that association are cordially invited to attend and take part in the discussion.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.—A meeting of the Hereford Division will be held at 20, East Street, Hereford, on Monday, March 21st, at 3.15 p.m. Agenda: Herefordshire General Hospital Contributory Scheme (the chairman of the Herefordshire General Hospital Contributory Scheme has kindly consented to be present and to make some explanatory remarks on the scope and working of the scheme for the benefit of members of the Division); mileage fees in emergency midwifery cases; social meeting in summer; post-graduate lectures; Circular M.25, 1926-27.

Meetings of Branches and Divisions.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held at the Town Hall, *Catford, S.E.6, on February 15th.* The Medical Secretary of the Association, Dr. ALFRED COX, O.B.E., gave an address entitled "The medical profession in South Africa."

Address by the Medical Secretary.

Dr. Cox said that there were about a million and a half whites and six or seven million blacks in South Africa, with a large sprinkling of coloured people and Indians, and the colour problem was a very difficult one socially. Medical men were numerous in the towns, whilst the remote country districts were comparatively under-doctored, a state of things common to other British Dominions and the United States. Medical fees being too high for the "poor white" and the coloured people and natives, proposals had been made which might eventuate in a national health insurance system. Political feeling ran high and pervaded everything, having a distinct influence on medical politics. He found that the senior doctors were very largely Edinburgh graduates, quite a number of them having married Scottish wives; the next generation were representative more of London and the provincial schools and less of Edinburgh; while among the youngest men there was an increasing section who had trained and qualified at the universities in Capetown and Johannesburg.

Dr. Cox spoke of the excellent work done under the auspices of the Rand Mines in connexion with silicosis, and also the first-class provision made at many of the mines for the medical treatment of the natives. He thought there was a tendency among the doctors to over-specialize, which resulted in people in some of the towns having difficulty in securing a "family doctor," which complaint he had also heard when he was in Canada. He dealt with the hospital system, which included big hospitals on more or less British lines in the large towns; in the smaller towns the hospitals were more like our "cottage" hospitals, practically everybody paying in accordance with their means both the hospital for their maintenance and the doctors for their treatment. He mentioned the prevalence of pneumonia among the mine workers, and the excellent work that had been done in the prevention and treatment of that disease, alluding particularly to the South African Institute for Medical Research in Johannesburg. Malaria was still common in some parts, and there was a good deal of leprosy, mainly confined to the natives. He had found the summer climate pretty trying, and it seemed to him that it was possible, at any rate for a man of his age, to have too much ultra-violet radiation; but he supposed that this was mainly due to the fact that he, as a Britisher, was unused to luxury in the way of sunshine, for he found that those who had lived in South Africa for any length of time complained that on coming to the old country they *missed the sunshine more than anything else. Although* there were a few good roads in South Africa near the big towns, on the whole they would be a revelation to the country doctors in Great Britain, who could have no idea of the difficulties in the way of transport which the South African doctors had to put up with. The motor car had, of course, been a very great boon, and he admired the way in which the country doctor took his car over tracks and into places which would horrify the owner of a car in this country.

Speaking of the loneliness of the doctors in the outlying districts, Dr. Cox referred to their pathetic anxiety to be organized in some way which would enable them to feel that they were part of the organization, and were not being forgotten. He alluded briefly to the object of his visit, and to the pleasure which it had given him to be the means of bringing about union in the medical profession in South Africa, and predicted a bright future for the new organization, which was still an integral part of the old British Medical Association. Dr. Cox then gave an interesting and amusing account of some of the personalities he had met both inside and outside the profession, and ended with a very warm appreciation of the hospitality and good-fellowship with which he was met everywhere.

Dr. THOMSON, the chairman, proposed a vote of thanks to the lecturer, which was seconded by Dr. BUCHAN, and carried.

BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

A MEETING of the Nuneaton and Tamworth Division was held on March 3rd at the Tamworth General Hospital.

Mr. A. B. DANBY, F.R.C.S., read a paper on "The role of prevention in obstetrics." He described the importance of prevention of complications during labour by investigations during pregnancy; discussed the various methods of measuring the pelvis, and pointed out the importance of not omitting to measure the transverse diameters at the pelvic outlet. He described various methods of performing version during pregnancy in order to correct malpresentations, the methods of inducing premature labour, and the place of *x rays in the diagnosis of presentations* during pregnancy. He exhibited numerous skiagrams.

In the subsequent discussion Drs. JONES, MILLARD, HORSBURGH, and FORREST took part, and Mr. DANBY replied. A vote of thanks to Mr. Danby for his very interesting address was carried by acclamation.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.

THE annual dinner of the Bournemouth Division was held at the Royal Bath Hotel, Bournemouth, on March 3rd; seventy-three members and their guests were present. After the dinner the company retired to the adjoining King's Hall, where dancing went on until midnight.

METROPOLITAN COUNTIES BRANCH: SOUTH MIDDLESEX DIVISION.

A MEETING of the South Middlesex Division was held at St. John's Hospital, *Twickenham, on March 9th*, when Dr. EWEN presided.

Dr. J. B. COOK opened a discussion on "Treatment of cancer by non-operative means." He dealt in particular with the treatment of cancer by lead, and stated that the chorionic epithelium was normally malignant in character and had the power of eroding the blood vessels, etc., and was also capable of cellular multiplication. Now it was well known that lead was used as an abortifacient, causing a cloudy swelling of the chorionic epithelium; further, lead had a stunting effect on normal growth. These factors led Professor Blair Bell of Liverpool to investigate the effect of lead upon malignant growths. Lead had always been administered in colloid preparations, as otherwise the lead ion was too toxic for intravenous injection. Dr. Cook and Dr. Frank *Coke*, working on these lines, but independently of Blair Bell, experienced great difficulty in obtaining a suitable preparation of lead. At first they used the oleat[illegible] very small doses. The nitro-benzoate was [illegible] on account of the gastric trouble caused. [illegible] ith 0.1 per cent. of lead *plus* 0.1 per cent. of mercury was tried, and the toxicity of *all these* preparations was tested upon animals. Last summer they used a preparation supposed to be identical with that used by Blair Bell, but tests made by Crooks's colloids proved that it became inert. Prior to commencing treatment the blood was examined and a differential count made. The urine was tested for albumin and the daily amount measured. There was usually some reaction after dosage, which might be focal, general, or both. Usually a little pain was complained of at the site of the tumour and the temperature might rise to 103° F. The total amount of urine passed in twenty-four hours was charted; diminution was regarded as a danger signal. The blood was examined, about a week after the first dose, for the presence of stippled cells. Patients were encouraged to drink 4 or 5 pints of lemonade daily, and a light diet was given. Dr. Cook gave details of many cases which he had treated; all of them were inoperable, and in all cases the conditions were improved considerably. In many cases the patients died later from other diseases. Experience seemed to indicate that cancer of the stomach was not a safe condition to treat with lead, but one must not expect to get good results from patients in the last stages of malignant cachexia. When there was much glandular involvement it was advisable to remove as many as practicable; also if parts of the growth could be removed prior to lead treatment so much the better. Finally, Dr. Cook considered that lead had a definite inhibitory effect upon

the growth of malignant tumours, and was the most successful of all non-operative measures in use at the present time.

A discussion ensued, after which Dr. ROBINSON, radiographer of West Middlesex Hospital, spoke about diathermy treatment of cancer. He explained that by that means large currents of electricity could be utilized as no stimulation occurred owing to an oscillating current being employed. Heat was produced with resistance to the circuit; as there was none in the electrodes it must be caused by the tissues. A large electrode was placed in one part of the body and a smaller one used at the site of the growth. This caused intense heat with desiccation and coagulation, the depth depending upon the diameter of the smaller electrode. No immediate haemorrhage occurred, and there was no shock. The scar left was very supple and there was no risk of dissemination. Coagulation of large vessels and nerves might take place.

Another discussion now took place amongst the members; and a hearty vote of thanks was proposed by the CHAIRMAN to Drs. Cook and Robinson.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

A MEETING of the South-West Essex Division was held at Whipps Cross Hospital, Leytonstone, on March 1st. The chairman, Dr. W. T. BROWN, drew attention to the circular letter referring to the Treasurer's Cup golf competition. Members were conducted round the wards by Dr. MUIR, superintendent of the hospital, and a series of cases demonstrated. These included cases of osteitis deformans, an abdominal tumour (? expansile), chronic mastitis, diabetes complicated by hepatic cirrhosis, pyloric stenosis with visible peristalsis, hemiplegia following chorea, pancreatic cyst, and an acute orchitis due to *B. coli* infection. The meeting finished, at 5.45 p.m., with an appreciative vote of thanks to Dr. Muir for a most interesting and instructive afternoon.

PUNJAB BRANCH.

At a well attended meeting of members of the medical profession resident in Lahore, held at the King Edward Medical College on February 8th, it was unanimously decided to resuscitate the Punjab Branch of the British Medical Association. Colonel C. R. BAKHLE, I.M.S., Inspector-General of Civil Hospitals, Punjab, who was voted to the chair, briefly explained the objects of the Association, and after a short discussion twenty ladies and gentlemen, not already members of the Association, signified their intention to apply for membership.

It was decided to defer the election of officers until the next meeting, and in the meantime a subcommittee, comprising Lieut.-Colonel C. A. Gill, I.M.S., Major Harper-Nelson, I.M.S., O.B.E., Major T. A. Hughes, I.M.S., Major Hakumat Rai, *M.C.*, Dr. Mirza Yakub Bey, Dr. Vishnu Nath, Miss Newton, M.B., and Dr. Chawla, was instructed to draw up draft rules of organization for consideration of the general meeting of the Branch on February 22nd.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A HIGHLY successful meeting of the Portsmouth Division was held at the Queen's Hotel, Southsea, on March 10th, when Dr. MEARNS FRASER was in the chair. The speaker for the evening was Sir JOHN COLLIE, C.M.G., M.D., whose address, entitled "Where law and medicine meet," dealt in an illuminating manner with many of the medico-legal problems which medical men encounter. Amongst other subjects the lecturer referred specially to medico-legal reports, the medical man in the witness-box, cross-examination, the county court, the Workmen's Compensation Act, malingering, and pseudo-neurasthenics. Through the address, which was most instructive and full of points of practical interest, ran a vein of light humour, pointed by sparkling epigram, and the keen interest of a large audience was maintained from start to finish.

On this occasion members had the opportunity of inviting as guests members of the legal profession, with the result that a large number, including Sir Thomas Bramsdon (the city coroner), Mr. F. G. Allen (the clerk of the peace), and most of the leading solicitors of the city accepted the hospitality of the Division and materially helped to promote the success of a most enjoyable evening.

In the discussion which followed the address the following solicitors and doctors, amongst others, took part: Mr. BOLITHO, Mr. BECHERVAISE, Mr. HALL KING, Dr. T. BEATON, Mr. F. G. ALLEN, Mr. CHURCHER, and Sir THOMAS BRAMSDON. The proceedings terminated with a most cordial vote of thanks to Sir John Collie, proposed by Sir S. GUISE MOORES, K.C.B., C.M.G., President of the Southern Branch, and seconded by Mr. F. G. ALLEN, clerk of the peace. Mr. Allen took this opportunity of expressing on behalf of the solicitors how much they appreciated being invited to the meeting and how greatly they had, one and all, enjoyed the address of Sir John Collie and the hospitality of the Portsmouth Division.

The total attendance numbered 132, of whom 30 were members of the legal profession, and 91 sat down to the supper which preceded the meeting.

SOUTH-WESTERN BRANCH: TORQUAY DIVISION.

A MEETING of the Torquay Division was held at the Torbay Hospital on February 9th, under the chairmanship of Dr. W. A. D. KING (Paignton).

After some routine business had been transacted the CHAIRMAN introduced Dr. T. DUNCAN GREENLEES, who gave a British Medical Association Lecture on "Early insanity: its medico-legal aspects." The subject was dealt with by the lecturer at considerable length under the following headings: (1) A brief account of the symptoms, and their treatment, as met with in the early stages of insanity, under these time epochs: (*a*) infancy and childhood; (*b*) puberty and adolescence; (*c*) adult life; (*d*) the climacteric period; (*e*) old age. (2) Treatment of mental cases in their own homes. (3) Certification of the insane, and when it should be done. (4) Summary and conclusions.

Dr. R. N. CRAIG, in the course of some criticisms, referred particularly to the recent advances in the treatment of general paralysis of the insane by malarial infection and to the modern theories on the pathology of maniacal states.

On the motion of Dr. YOUNG EALES, seconded by Dr. THISTLE, a hearty vote of thanks was accorded to Dr. Greenlees.

SUSSEX BRANCH: BRIGHTON DIVISION.

A COMBINED meeting of the Brighton Division of the British Medical Association and of the Brighton, Hove, and District Teachers' Association was held at the offices of the Hove Education Committee on March 2nd, when Dr. DONALD HALL, chairman of the Division, presided. He welcomed the experimental meeting of the two bodies which had been inaugurated by the honorary secretary of the Division, Dr. L. A. Parry, and expressed the hope that it was only the beginning of a series. There was a good attendance both of teachers and medical practitioners. Dr. NEVILLE COX opened an interesting discussion on "How to educate parents." This was followed by an animated debate in which many members of both associations took part. A further meeting is to be arranged shortly.

SUSSEX BRANCH: HASTINGS DIVISION.

A MEETING of the Hastings Division was held at the Queen's Hotel, Hastings, on March 1st, when Dr. E. C. MACKAY, chairman of the Division, presided. Coffee was served at 8.15 p.m. Dr. LANGLEY, M.B.E., of Ancoats Hospital, Manchester, delivered a British Medical Association Lecture on "Auricular fibrillation: its nature and treatment." The lecturer first explained very clearly the mechanism of the heart beat. By means of excellent lantern slides the nature of the sino-auricular node was demonstrated. The waves then spread out through the auricular musculature and thence to the auriculo-ventricular bands. The waves are conducted by contiguity of auricular muscle fibre, not by conducting nerve fibre. From the auriculo-ventricular band the waves passed to the Purkinje tissue in the inner wall of the ventricle, this tissue acting the part of end-organs. Morbid conditions of the heart were then discussed and the mechanism of "fibrillation" and "flutter" were explained. The lecturer pointed out that digitalis was only useful in slowing the heart in fibrillation or flutter; it was useless in ordinary cases of rapid pulse due to other conditions. The size of the dose was fully discussed, and he believed that it was useless to employ the drug in small doses. A dose of the tincture equivalent to about 0.15 c.cm. per lb. of body weight should be given. Cases of idiosyncrasy to the drug would be met with, but they were rare. In his clinic he had confined himself to the *B.P.* tincture. After the acute distress had passed off smaller doses might be given, sufficient to keep the apical rate at about 85 per minute. A series of electro-cardiograms was shown on the screen.

The lecture was listened to with great interest and was followed by a keen discussion, after which Dr. Langley was thanked for his address.

YORKSHIRE BRANCH: DONCASTER DIVISION.

Inaugural Dinner.

THE inaugural dinner of the Doncaster Division was held at Parkinson's Café, Doncaster, on March 8th, when Dr. HENRY J. CLARKE was in the chair. Sir Berkeley Moynihan, Bt., K.C.M.G., President of the Royal College of Surgeons, and Dr. Alfred Cox, Medical Secretary, were the principal guests. There were sixty members and non-members present. The principal toast of the evening, "The British Medical Association," was proposed by Sir BERKELEY MOYNIHAN, and was replied to by Dr. ALFRED COX. Other toasts followed, intermingled with musical items.

Dr. LECHMERE ANDERSON proposed the health of the chairman and thanked him for having so generously given such a fitting send-off to the Division, and the toast was supported by Dr. E. T. GOODE. Many allusions were made to Dr. Clarke's position in the affection of his colleagues, particularly by Sir BERKELEY MOYNIHAN, who, as an old personal friend, made some very interesting and graceful references to Dr. Clarke's career. The toast was received with acclamation. Dr. CLARKE, in responding, made generous acknowledgement of the help he had had from Mr. Callander, the honorary secretary, and expressed the hope that Dr. Cox's prophesy that Doncaster would become one of the best Divisions in the country would be fulfilled.

YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.

ON March 9th a British Medical Association Lecture was given to the Huddersfield Division at the Huddersfield Royal Infirmary by Professor MILES PHILLIPS (Sheffield) on "Some obstetrical emergencies." Forty-six members and visitors were present. The lecturer limited his subject to emergencies connected with anomalies of muscular action of the uterus and showed many lantern slides to illustrate his remarks. He first dealt with the sluggish uterus and the exhausted uterus, and pointed out the value of sedatives (especially chloral in large doses) in treatment. He next dealt with cases characterized by severe pain, especially the colicky uterus and cases in which a contraction ring formed. The diagnosis of contraction ring was fully dealt with and the treatment discussed at length, and the value of antispasmodics and deep anaesthesia emphasized. Acute inversion of the uterus was also discussed, and the value of delaying reduction until the primary shock was over was demonstrated by statistics and cases. Avulsion of the uterus was also discussed.

National Insurance.

A STATISTICAL REVIEW OF NATIONAL HEALTH INSURANCE.

AT the meeting of the Royal Statistical Society on March 15th Sir ALFRED WATSON, K.C.B., the Government Actuary, read a paper entitled "National health insurance: a statistical review."

The author referred first to the objects of the scheme and to the fact that 97 per cent. of the insured population were members of approved societies, leaving 3 per cent. only to be divided between the "deposit contributors" and the men of the Forces whose contributions were paid into the Navy, Army, and Air Force Insurance Fund. The accumulated funds now approached £120,000,000, one-half of which was represented by valuation surpluses and cognate reserves, which were in course of application to raise the general level of benefits and to extend their scope. He then examined the movement of the industrial population with reference to insurance under the national scheme in the years 1913 to 1923. He estimated the number of insured workers in October, 1913, as 10,300,000 men and 4,610,000 women, exclusive of persons within what is now the Irish Free State. Ten years later these figures had increased, he estimated, to 10,699,000 men, and 4,977,000 women, of whom 930,000 were married. The comparatively small increase among men was explained by the war deaths, numbering over 600,000. The number of insured women had been considerably higher; this section of the contributors had decreased since 1918 by about 540,000 following the exodus from industry of women who took up employment during the war. He estimated that 2,630,000 men and 2,633,000 women had entered insurance between 1919 and 1923, and that 60 per cent. of them came in at the age of 16, when the compulsory insurance of those in employment begins; over 1,800,000 men and 3,000,000 women had gone out of insurance in the same period. 820,000 of the women having left industrial employment on marriage. He found that nearly 50 per cent. of the men who left insurance were over the age of 35, and concluded that a large majority of these had taken up forms of occupations other than employment. A corresponding feature was found also in the case of women; it seemed evident that quite apart from those who left employment on marriage many women resorted only temporarily to industrial employment.

The next section of the paper dealt with the claims for sickness and disablement benefits. Among both men and women the claims for sickness benefit were shown to have fallen greatly during the war years; this was particularly the case in regard to women, who in 1916-17 drew less than two-thirds of the sum drawn by them in 1913-14. Since the war the claims for sickness benefit had again risen, but the cost in 1925-26 showed that, on the average, sickness among men was still considerably below the level of 1913-14. Among women the indications were less satisfactory, the figures suggesting that within a short period the earlier level would again be reached.

Comparing the sickness experience of a representative sample of men in the years 1921-23 with late nineteenth-century experience, such as that of the Manchester Unity of Oddfellows in the years 1893-97, a marked improvement in the health of the community seemed to be indicated, the "rate of sickness" having fallen on the average by about 20 per cent. This was traced to a large reduction, at all ages, in the proportion of the insured who claimed benefit; among men of ages 40 to 45, 160 in 1,000 drew benefit in 1921-23, against 246 in 1,000 in 1893-97. The duration of sickness, on the other hand, had increased, the new average at the ages cited being 5.0 weeks per case against 4.3 weeks shown by the older tabulation. Special and not unsatisfactory causes were thought to explain these features. It was doubtful whether there was any real increase in the length of incapacity. Among unmarried women the proportion who fell sick was, as a rule, somewhat less than among men of the same age, but the duration of incapacity was much longer, and on the whole, therefore, the average amount of sickness per insured woman was greater than among men. Among married women, both the number claiming and the duration of the claim were relatively greater than among the unmarried; the duration of sickness benefit in the case of a married woman claimant averaged the very high figure of 8¾ weeks.

Disablement benefit (which is entered upon when sickness benefit has been paid for twenty-six weeks) was found to be an increasing quantity among all sections of the insured. This was an expected feature as the scheme grew to maturity, and so far as men were concerned the cost was well within the expectation indicated by the older friendly society experiences. The extent of the claims of women in respect of disablement benefit occasioned, however, some concern. Taking men and women together, it was estimated that about 200,000 persons were now permanently disabled and drawing benefit from the approved societies.

After explaining the seasonal variation of sickness, in which it was shown that the claims in the winter months averaged from 50 to 100 per cent. more than the summer minimum, Sir Alfred Watson discussed the changes in the birth rate brought out by the claims for maternity benefit. The claims among the wives of insured men in the years 1919-23 were 88 per cent. of those expected by the financial standard. The birth rate (compared with the married population at the reproductive ages) had fallen, it was estimated, by about 20 per cent. since the beginning of the century, but, on the other hand, the proportion of the married in the population had substantially grown, the increase in this respect being 20 per cent. at the ages 20 to 25, 10 per cent. at ages 25 to 30, and 5 per cent. or more in other age-groups. In comparison with the birth rates among wives of insured men, the great majority of whom are not employed outside the home, the birth rates among employed married women were significantly low; the proportion varied with age, being, for example, 69 per cent. at ages 25 to 30, and 61 per cent. at ages 30 to 35.

REGIONAL DENTAL STAFF.

THE Ministry of Health has issued a circular (A.S.261) describing what has already been done to bring into immediate operation the service of regional dental officers for England and Wales. The regional dental service forms part of the arrangements under the new scale and conditions of dental service as agreed by the Dental Benefit Joint Committee, and will be available for those societies and branches only which have adopted these arrangements.

The duties of the regional dental staff will include (*a*) advising approved societies entitled to avail themselves of the service, and dentists to whom members of such societies have applied for treatment, on questions relating to dental estimates furnished or treatment given; (*b*) advising on similar questions referred to them by the Joint Committee or the Minister; and (*c*) making inquiries at the direction of the Minister into matters relating to dental treatment under additional benefit schemes. Reference to these officers, whether from approved societies or dentists, will be of two kinds: "estimate references" relating to an estimate for work proposed to be done, and "treatment references" relating to the nature or quality of treatment which has been given, including questions of the quality or workmanship or fitting of dentures or other material used in treatment. Separate forms are provided for references of these two classes.

Six regional dental officers have so far been appointed, with offices in London, Manchester, Leeds, and Cardiff. The areas covered by the scheme are grouped in five divisions: North-Western, North-Eastern, South-Western, South-Eastern, and Wales. Additional officers will be appointed, or the services of part-time dental referees obtained, if found necessary, to enable the staff to cope with their duties. A principal regional dental officer, Mr. H. Alvin Mahony, in addition to his ordinary duties for the South-Eastern Division, with offices at Queen Anne's Chambers, Dean Farrar Street, S.W., will be responsible also for the technical supervision of the work of the staff as a whole.

Correspondence.

Anaesthetic Fees.

SIR,—It is evident that some Panel Committees are going rather far in their desire to secure adequate distribution amongst panel practitioners of the available capitation fund by recommending the non-payment of anaesthetic fees in cases taken into Poor Law hospitals for operation, and by deciding the choice of anaesthetic to be used in particular cases, regardless of what the operator, or preferably the anaesthetist, might consider the most suitable one. It is possible that the lure of an anaesthetic fee may result in a general anaesthetic being used for every conceivable thing, notwithstanding the obvious fact that spraying with ethyl chloride or infiltration anaesthesia would do equally well, but for which no special payment is made; but such a possibility does not justify interference by any Panel Committee, which is presumably ignorant of the circumstances of every case it has to deal with; and the anaesthetist or the operator should be given a perfectly free hand in the matter. He should be trusted to do what is right for the patient, and not be saddled with the suspicion of wishing to deprive his colleagues of what they can legitimately claim as their own.

In the case of panel patients undergoing operative treatment in Poor Law hospitals, their presence in such hospitals entails a considerable amount of extra work upon the medical staff, who are under contract with the guardians to give their services to the destitute poor only, and not to every patient, private or panel, whom their fellow practitioners of the district may wish to get rid of. There are Poor Law hospitals which are open to medical men, not necessarily on their staffs. Such being the

case, any panel practitioner sending an insured patient for operative treatment should at least be called upon to administer the anaesthetic, for which service he is, after all, in receipt of sixpence for every patient on his panel list. Why should the staff be expected to relieve him of this obligation, and, if it does so, what possible objection can there be to its receiving the anaesthetic fee in payment for work which they are under no contractual obligation to perform?

Too much abuse is being made of hospitals generally by the public, and that some medical men should strive to make an abuse of one another's services, so that, in the end, some may keep what they have not worked for and others be deprived of what they are entitled to claim, is unfortunately further evidence of the fact that some people's notion of justice and fair play can be priced at a few shillings, or very much less individually, which recognition on their part of the services and responsibilities devolving upon others through their deliberate action actually deprives them of.—I am, etc.,

D. W. STANDLEY.

Greenhithe, Kent, March 8th.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders J. H. McDowall to the *Defiance*; F. St. D. Wickham, O.B.E., to the *Victory* for the *Assistance* on commissioning for trials, and to the *Assistance* on recommissioning.

Surgeon Lieutenant Commander J. F. Pace is promoted to the rank of Surgeon Commander.

Surgeon Lieutenant Commanders N. A. H. Barlow to the *Bryony*; W. A. Jolliffe to the *Pembroke* for R.N. Hospital [illegible]; W. Cocking to the *Pembroke* for R.N. Hospital [illegible] rary; N. B. de M. Greenstreet to the *Vivid* for [illegible].

Surgeon Lieutenant R. H. Dummett to the *Crocus*.

Surgeon Lieutenant (Short Service) R. Schofield has transferred to the permanent list.

Messrs. J. Johnston, J. B. Patrick, J. R. C. Spicer, and C. P. Burges have entered as Surgeon Lieutenants for short service, and appointed to R.N. Hospital, Haslar, for course of instruction.

ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Lieutenant H. P. Widdup to the *Ramillies* for twenty-eight days' training.

ROYAL AUSTRALIAN NAVY.

Surgeon Lieutenant A. Scott Mackenzie to the *Victory* for R.N. Hospital, Haslar.

ROYAL ARMY MEDICAL CORPS.

Major B. Biggar is restored to the establishment.

Temporary Captain M. Ferguson relinquishes his commission and is granted the rank of Captain.

The name of Captain C. M. Forster is as now described, and not as stated in the *London Gazette* of February 1st, 1927.

Temporary Lieutenant F. Widlake resigns his commission.

J. M. F. Whitby to be temporary Lieutenant.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader A. J. Brown, D.S.O., to Headquarters, Egypt.

Flight Lieutenant T. McClurkin is promoted to the rank of Squadron Leader.

Flight Lieutenants L. C. Palmer-Jones to No. 4 Flying Training School, Egypt; O. A. Lindup to Headquarters, Air Defence of Great Britain, Uxbridge.

Flying Officers A. L. St. A. McClosky to Research Laboratory and Medical Officers' School of Instruction; R. Thorpe to Research Laboratory and Medical Officers' School of Instruction on appointment to a short-service commission; G. E. Church and M. D. Rawkins to R.A.F. Hospital, Halton; R. A. W. Kerr to No. 2 Flying Training School, Digby.

Flying Officer D. Oliver resigns his short-service commission.

INDIAN MEDICAL SERVICE.

Lieut.-Colonels A. Spitteler, O.B.E., and J. Norman Walker to be Brevet-Colonels.

Majors to be Lieutenant-Colonels: G. E. Malcomson, H. W. Acton, V. B. Green-Armytage, A. N. Dickson, M.C., A. J. H. Russell, C.B.E., R. E. Wright, D. H. Rae, M.C., F. A. Barker, O.B.E., and A. N. Thomas, D.S.O., P. K. Tarapore, D. D. Kamat, W. E. R. Williams, O.B.E., A. F. Babonau, C.I.E., O.B.E., and S. J. Bhathena.

Major Sir T. J. Carey-Evans, M.C., has retired from the service.

Captain U. J. Bourke to be Major.

Lieutenant T. J. Davidson to be Captain.

REGULAR ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieutenant A. G. Henderson to be Captain.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Captain H. C. O. Hackney to be Major.

British Medical Association.

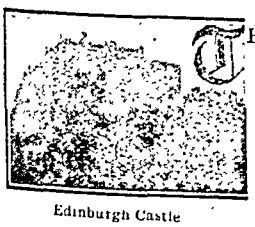
NINETY-FIFTH ANNUAL MEETING, EDINBURGH, JULY, 1927.

Patron: HIS MAJESTY THE KING.

President: R. G. HOGARTH, C.B.E., F.R.C.S., Senior Surgeon, General Hospital, Nottingham.



President-Elect: SIR ROBERT W. PHILIP, M.D., LL.D., F.R.C.P.Ed., Consulting Physician, Royal Infirmary, Edinburgh.

Chairman of Representative Body: H. B. BRACKENBURY, M.R.C.S., L.R.C.P.

Chairman of Council: SIR ROBERT BOLAM, M.D., LL.D., F.R.C.P.

Treasurer: N. BISHOP HARMAN, M.B., F.R.C.S.

PROVISIONAL PROGRAMME.

Edinburgh Castle

THE incoming President, Sir ROBERT PHILIP, will deliver his Address to the Association on Tuesday, July 19th, at 8 p.m.

The ANNUAL REPRESENTATIVE MEETING will begin on Friday, July 15th, at 10 a.m., and be continued on the three following week-days. The Representatives' Dinner will take place at the University Union on Friday evening, July 15th, at 7.30 p.m.

The statutory ANNUAL GENERAL MEETING will be held on Tuesday, July 19th, at 2 p.m., and the adjourned general meeting at 8 p.m.

The Annual Dinner of the Association will take place on the evening of Thursday, July 21st.

The Conference of Honorary Secretaries will be held at 2.30 p.m. on Wednesday, July 20th, and the Secretaries' Dinner at 6.30 the same evening.

The official Religious Service will be held in St. Giles's Cathedral on Tuesday, July 19th, at 4.30 p.m.

The Annual Exhibition of surgical appliances, foods, drugs, and books will be open for inspection on Monday, July 18th, from 2 till 6 p.m.; the formal opening by the President will take place on July 19th at 9.30 a.m. The exhibition will remain open on July 20th, 21st, and 22nd from 9 a.m. to 6 p.m.

A Centenary Celebration commemorative of the birth of Lord Lister, presided over by the Earl of Balfour, K.G., will take place on the evening of Wednesday, July 20th, at 8 o'clock, in the McEwan Hall, when short addresses will be given by Sir W. Watson Cheyne, Bt., Professor Tuffier of Paris, Professor Harvey Cushing of Harvard University, and Dr. James Stewart of Halifax, Nova Scotia. During the week of the Annual Meeting a museum containing relics of Lister's life and work will be displayed in the Upper Library of the Old University. A *Lister Memorial Volume* has been prepared, and a copy will be given to each member of the Association who registers in the Reception Room.

Saturday, July 23rd, will be given to excursions to places of interest in the neighbourhood of Edinburgh.

THE SECTIONS.

The Scientific Sections will meet from 10 a.m. to 1 p.m. for papers and discussions on Wednesday, Thursday, and Friday, July 20th, 21st, and 22nd.

The following Sections will meet on Three Days.

MEDICINE.

President: Professor G. LOVELL GULLAND, C.M.G., M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: J. HILL ABRAM, M.D., F.R.C.P. (Liverpool); R. A. FLEMING, M.D., F.R.C.P.Ed. (Edinburgh); H. MORLEY FLETCHER, M.D., F.R.C.P. (London); W. T. RITCHIE, O.B.E., M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: GEORGE GRAHAM, M.D., F.R.C.P., 1, Devonshire Place, London, W.1; G. D. MATHEWSON, M.B., F.R.C.P.Ed., 28A, Moray Place, Edinburgh.

SURGERY.

President: Professor D. P. D. WILKIE, O.B.E., M.D., Ch.M., F.R.C.S. (Edinburgh).

Vice-Presidents: J. W. DOWDEN, C.M., F.R.C.S.Ed. (Edinburgh); F. J. STEWARD, M.S., F.R.C.S. (London); J. W. STRUTHERS, F.R.C.S.Ed. (Edinburgh); H. WADE, C.M.G., D.S.O., F.R.C.S.Ed. (Edinburgh); A. M. WEBBER, M.S., F.R.C.S. (Nottingham).

Honorary Secretaries: J. M. GRAHAM, Ch.M., F.R.C.S.Ed., 8, Manor Place, Edinburgh; E. C. HUGHES, O.B.E., M.Ch., F.R.C.S., 17, Wimpole Street, London, W.1.

OBSTETRICS AND GYNAECOLOGY.

President: JAMES HAIG FERGUSON, M.D., C.M., F.R.C.P.Ed., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: T. WATTS EDEN, M.D., F.R.C.P., F.R.C.S.Ed. (London); GIBBON FITZGIBBON, M.D., F.R.C.P.I. (Dublin);

WILLIAM FORDYCE, M.D., F.R.C.P.Ed. (Edinburgh); Professor R. W. JOHNSTONE, C.B.E., M.D., F.R.C.S.Ed. (Edinburgh); Mrs. ETHEL VAUGHAN-SAWYER, M.D. (London).

Honoraries Secretaries: DANIEL DOUGAL, *M.C.*, M.D., 11, St. John Street, Manchester; W. F. T. HAULTAIN, O.B.E., *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 6, Walker Street, Edinburgh.

PATHOLOGY AND BACTERIOLOGY.

President: Professor J. LORRAIN SMITH, M.D., F.R.S., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: J. W. DAWSON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); W. R. LOGAN, M.D., F.R.C.P.Ed. (Edinburgh); Professor T. J. MACKIE, M.D., D.P.H. (Edinburgh); H. D. WRIGHT, M.D., M.R.C.P.Ed. (London).

Honorary Secretaries: JAMES DAVIDSON, M.B., Ch.B., Pathological Department, University of Edinburgh; H. J. PARISH, M.D., M.R.C.P.Ed., D.P.H., Wellcome Physiological Research Laboratories, Langley Court, Beckenham, Kent.

THERAPEUTICS AND PHARMACOLOGY.

President: Professor J. A. GUNN, M.D., D.Sc. (Oxford).

Vice-Presidents: Professor A. J. CLARK, *M.C.*, M.D., F.R.C.P. (Edinburgh); Professor FRANCIS R. FRASER, M.D., F.R.C.P. (London); E. P. POULTON, M.D., F.R.C.P. (London).

Honorary Secretaries: E. G. HOLMES, M.B., B.Chir., Pharmacological Laboratory, Cambridge; C. G. LAMBIE, *M.C.*, M.B., F.R.C.P.Ed., 31, Drumsheugh Gardens, Edinburgh.

DISEASES OF CHILDREN.

President: Professor JOHN FRASER, *M.C.*, M.D., Ch.M., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: H. CHARLES CAMERON, M.D., F.R.C.P. (London); ALEXANDER DINGWALL FOLDYCE, M.D., F.R.C.P.Ed. (Liverpool); CHARLES MCNEIL, M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: Miss HELEN M. M. MACKAY, M.D., 28, John Street, Bedford Row, London, W.C.1; LEWIS THATCHER, M.D., F.R.C.P.Ed., 8, Melville Crescent, Edinburgh.

MENTAL DISEASES.

President: Professor GEORGE M. ROBERTSON, M.D., P.R.C.P.Ed. (Edinburgh).

Vice-Presidents: BERNARD HART, M.D., F.R.C.P. (London); JOHN KEAY, C.B.E., M.D., F.R.C.P.Ed. (Bangour); J. R. LORD, C.B.E., M.D., F.R.C.P.Ed. (Epsom); H. C. MARR, M.D., F.R.F.P.S.Glas. (Edinburgh).

Honorary Secretaries: R. D. GILLESPIE, M.D., 152, Harley Street, London, W.1; W. M. MCALISTER, M.B., Ch.B., M.R.C.P.Ed., 151, Morningside Drive, Edinburgh.

The following Sections will meet on Two Days.

NEUROLOGY.

President: Professor EDWIN BRAMWELL, M.D., F.R.C.P. (Edinburgh).

Vice-Presidents: ALEX. NINIAN BRUCE, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); J. GODWIN GREENFIELD, M.D., F.R.C.P. (London); F. M. R. WALSHE, O.B.E., M.D., D.Sc., F.R.C.P. (London).

Honorary Secretaries: E. A. CARMICHAEL, M.B., Ch.B., F.R.C.P.Ed., [illegible] queen Square, London, W.C.1; NORMAN M. [illegible], M.B., F.R.C.S.Ed., 8, Grosvenor Crescent, Edinburgh.

OPHTHALMOLOGY.

President: A. H. H. SINCLAIR, M.D., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: WILFRED ALLPORT, M.B., F.R.C.S.Ed. (Birmingham); Sir ARNOLD LAWSON, K.B.E., F.R.C.S. (London); H. M. TRAQUAIR, M.D., F.R.C.S.Ed. (Edinburgh).

Honorary Secretaries: R. E. BICKERTON, D.S.O., M.B., Ch.B., 33, Portland Place, London, W.1; E. H. CAMERON, M.B., Ch.B., F.R.C.S.Ed., 7, Darnaway Street, Edinburgh.

LARYNGOLOGY AND OTOLOGY.

President: A. LOGAN TURNER, M.D., P.R.C.S.Ed. (Edinburgh).

Vice-Presidents: J. S. FRASER, M.B., F.R.C.S.Ed. (Edinburgh); W. M. MOLLISON, C.B.E., M.Chir., F.R.C.S. (London); DONALD R. PATERSON, M.D.Ed., F.R.C.P. (Cardiff).

Honorary Secretaries: A. R. DINGLEY, F.R.C.S., 47, Queen Anne Street, London, W.1; W. T. GARDINER, *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 18, Chester Street, Edinburgh.

PREVENTIVE MEDICINE.

President: Professor P. S. LELEAN, C.B., C.M.G., F.R.C.S., D.P.H. (Edinburgh).

Vice-Presidents: G. F. BUCHAN, M.D., D.P.H. (London); Miss HARRIETTE CHICK, D.Sc. (London); A. M. HEWAT, M.D., D.P.H. (London); G. R. LEIGHTON, O.B.E., M.D., D.Sc. (Edinburgh).

Honorary Secretaries: W. T. BENSON, B.Sc., M.D., D.P.H., M.R.C.P.Ed., City Hospital, Comiston Road, Edinburgh; C. W. HUTT, M.D., D.P.H., Council Offices, 197, High Holborn, London, W.C.

PHYSIOLOGY AND BIOCHEMISTRY.

President: Professor Sir EDWARD SHARPEY-SCHAFER, M.D., LL.D., D.Sc., F.R.S. (Edinburgh).

Vice-Presidents: Professor P. T. HERRING, M.D., F.R.C.P.Ed. (St. Andrews); Professor D. MURRAY LYON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); Professor JOHN MELLANBY, M.D. (London); Professor T. H. MILROY, M.D. (Belfast); Professor JOHN TAIT, M.D., D.Sc. (Montreal).

Honorary Secretaries: Professor B. A. MCSWINEY, M.B., B.Ch., School of Medicine, Leeds; Miss MAY LAURIE WALKER, B.Sc., M.B., Ch.B., Department of Physiology, University of Edinburgh.

COMPARATIVE MEDICINE.

President: Principal O. CHARNOCK BRADLEY, M.D., D.Sc., F.R.C.V.S. (Edinburgh).

Vice-Presidents: Professor J. B. BUXTON, M.A., F.R.C.V.S. (Cambridge); F. E. CREW, M.B., Ch.B. (Edinburgh); Major G. W. DUNKIN, M.R.C.V.S. (London).

Honorary Secretaries: T. W. M. CAMERON, Ph.D., B.Sc., M.R.C.V.S., London School of Hygiene and Tropical Medicine, 23, Endsleigh Gardens, London, W.C.1; J. RUSSELL GREIG, M.R.C.V.S., Royal (Dick) Veterinary College, Edinburgh.

The following Sections will meet on One Day.

DERMATOLOGY.

President: ROBERT CRANSTON LOW, M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: W. HERBERT BROWN, M.D. (Glasgow); H. D. HALDIN-DAVIS, M.D., F.R.C.S. (London).

Honorary Secretaries: ROBERT AITKEN, M.D., F.R.C.P.Ed., 8, Palmerston Place, Edinburgh; F. D. HOWITT, M.D., 87, Harley Street, London, W.1.

TROPICAL DISEASES.

President: ANDREW BALFOUR, C.B., C.M.G., M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: Lieut.-Colonel E. D. W. GREIG, C.I.E., M.D., D.Sc. (Edinburgh); Lieut.-Colonel W. F. HARVEY, C.I.E., M.D., C.M., D.P.H. (Edinburgh); Lieut.-Colonel W. GLEN LISTON, C.I.E., M.D., D.P.H. (Edinburgh); Lieut.-Colonel W. P. [illegible] D.S.O., O.B.E., M.D., F.R.C.P.I., D.P.H. (London).

Honorary Secretaries: A. R. D. ADAMS, M.B., Ch.B., D.T.M., [illegible] dicine, University of Liverpool; J. F. C. HASLAM, *M.C.*, M.B., D.P.H., Bureau of Hygiene and Tropical Diseases, 23, Endsleigh Gardens, London, W.C.1.

FORENSIC MEDICINE.

President: Professor H. HARVEY LITTLEJOHN, M.B., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: The Right Hon. Earl RUSSELL (London); Sir WALTER SCHRODER, K.B.E. (London); Professor SYDNEY A. SMITH, M.D., D.P.H. (Cairo).

Honorary Secretaries: [illegible] A. KERR, M.B., Ch.B., D.P.H., [illegible] e Department, University, Teviot [illegible] E. W. MCFALL, M.D., D.P.H., [illegible] verpool.

TUBERCULOSIS.

President: Professor S. LYLE CUMMINS, C.B., C.M.G., M.D., LL.D. (Cardiff).

Vice-Presidents: WILLIAM BRAND, M.B., C.M. (London); S. VERE PEARSON, M.D. (Mundesley); ERNEST WATT, M.D., D.Sc., M.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: J. C. SIMPSON, *M.C.*, M.B., Ch.B., D.P.H., Southfield Sanatorium Colony, Liberton, Edinburgh; R. R. TRAIL, *M.C.*, M.D., King Edward VII Sanatorium, Midhurst.

VENEREAL DISEASES.

President: DAVID LEES, D.S.O., M.B., F [illegible]

Vice-Presidents: ARCHIBALD CAMBELL, M [illegible]
Mrs. MARGARET ROBKE, M.B., Ch.B. [illegible]
TAYLOR, D.S.O., M.B., F.R.C.S.Ed. (Liverpool).

Honorary Secretaries: F. C. DOBLE, M.R.C.S., L.R.C.P., 93A, Harley Street, London, W.1; Miss MARY FORBES LISTON, M.B., Ch.B., 33, Comely Bank, Edinburgh.

RADIOLOGY.

President: J. M. WOODBURN MORISON, M.D., C.M., D.M.R.E. (Edinburgh).

Vice-President: M. R. J. HAYES, F.R.C.S.I. (Dublin).

Honorary Secretaries: W. CRICHTON FOTHERGILL, M.B., Ch.B., D.M.R.E., 5, Hermitage Drive, Edinburgh; JOHN MUIR, O.B.E., M.B., B.Ch., British Institute of Radiology, 32, Welbeck Street, London, W.1.

HISTORY OF MEDICINE.

President: JOHN D. COMRIE, M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: ARNOLD CHAPLIN, M.D., F.R.C.P. (London); CHARLES SINGER, M.D., D.Litt., F.R.C.P. (London); R. W. INNES SMITH, M.D. (Sheffield); HENRY S. WELLCOME (Beckenham).

Honorary Secretaries: WALTER J. DILLING, M.B., Ch.B., Faculty of Medicine, University of Liverpool; ADAM CAIRNS WHITE, M.B., Ch.B.Ed., Pharmacological Department, University of Edinburgh.

MEDICAL SOCIOLOGY.

President: F. N. KAY MENZIES, M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: L. D. CRUICKSHANK, M.D., M.R.C.P.Ed., D.P.H. (Edinburgh); Sir HENRY S. KEITH, J.P. (Hamilton); the Hon. Lord MACKENZIE, LL.D. (Edinburgh); the Hon. Sir ARTHUR STANLEY, G.B.E., C.B., LL.D., Hon. F.R.C.P.Ed. (London); Sir NORMAN WALKER, M.D., LL.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: T. YULE FINLAY, M.D., M.R.C.P.Ed., 9, Hermitage Gardens, Edinburgh; B. S. SIMMONDS, M.S., F.R.C.S., 124, Harley Street, London, W.1.

The Honorary Local General Secretary of the Annual Meeting is A. FERGUS HEWAT, M.D., F.R.C.P.Ed., 14, Chester Street, Edinburgh.

HOTEL ACCOMMODATION.

THE Hotels and Lodgings Committee has practically completed its arrangements for coping with the large numbers who are expected to visit Edinburgh in July. In order to secure the accommodation which is believed to be necessary, the Committee has definitely engaged all the available rooms in the city, and will allocate these to applicants in rotation. The Scottish Medical Secretary (Dr. Drever) has undertaken to do this work for the Committee, and applications for rooms should be sent to him at 6, Drumsheugh Gardens. A form for the purpose has been prepared for the convenience of members and appeared in our advertisement pages a fortnight ago; it will be repeated in subsequent issues. The accommodation is grouped in three classes—namely:

1. Hotels, whose tariff for bed and breakfast ranges between 8s. 6d. and 14s. The number who can be accommodated in these is comparatively limited.

2. Private hotels and boarding houses, at prices from 5s. 6d. to 8s. 6d. for bed and breakfast. Of these there is a large number, all of them comfortable.

3. Hostels where the tariff is 8s. for bed and breakfast. Not many of these are available, but those that are can be recommended.

Garage accommodation has also been secured, and lodgings for chauffeurs.

It will facilitate other arrangements if members who intend to be present at the Annual Meeting will notify their intention whether they have already secured rooms or not. Early application for rooms is earnestly desired.

REDUCED RAILWAY FARES TO EDINBURGH.

THE Railway Clearing House announces that the usual concession to members of the British Medical Association in regard to railway fares will apply to the Annual Meeting in Edinburgh. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue passenger tickets to Edinburgh, available from July 13th to 25th, at the ordinary single fare and one-third for the double journey, fractions of 3d. being reckoned as 3d., with a minimum adult fare of 1s. A printed voucher of the usual kind, duly filled in by the applicant and signed by the Financial Secretary of the Association, must be given up at the booking office when the ticket is bought. These vouchers will be obtainable in due course on application to the Finance Department, British Medical Association, Tavistock Square, London, W.C.1.

British Medical Association.

CURRENT NOTES.

Appointments Overseas.

IT cannot be too widely known that the Medical Secretary is always glad to assist members in preliminary inquiries as to conditions overseas. At its meeting on March 18th the Dominions Committee considered suggestions from an oversea Branch for ensuring that up-to-date information in connexion with all such vacancies occurring in its area should always be immediately available in this country at the central office of the Association. The Branch states the position as follows:

"From time to time the president and council of this Branch receive complaints from doctors on the ground that their appointments when taken up are not, in many details, what they were led to believe they would be when they received the appointments. Once such a doctor comes out here from home and takes up his appointment on an agreement for a term of years it is a matter of considerable difficulty for us as a body to help him; but at the same time we feel he should never have been allowed to accept an appointment on such terms, nor presumably would such a doctor have accepted the appointment if he had received reliable information earlier. . . . There have been one or two bad cases lately. 'All we can do is to advise the doctor who has consulted us to serve out his time and fulfil his obligations to the best of his ability and leave for good at the end of his term of agreement, but the unfortunate part is that another man is appointed in his place . . . on exactly the same terms. We, as a body here, are actually not in a position to advise any individual before the appointment. He, in turn, on realizing things, applies to us, but it is too late to give effective help. So he in turn resigns on the expiry of his agreement. And so it goes on."

Even the admirable arrangements outlined by the Branch to safeguard members from such mistakes must remain useless so long as the practitioners concerned accept these contracts without adequate preliminary inquiries and (where they are not in a position to prosecute such inquiries themselves) neglect the obvious precaution of applying to the Medical Secretary for the help he is only too anxious to give. The experience of the head office in this matter is parallel to that outlined by the Branch. Help is only too often asked for when it is too late to take any effective action.

Approved Societies and Medical Certificates.

At the annual conference of Industrial Approved Societies, held on March 21st, certain statements were made to which it seems necessary to direct immediate notice. According to reports which are usually accurate, Mr. A. C. Thompson, chairman of the Prudential Assurance Company and of the conference, said that he was "forced with reluctance to the conclusion that many members had been provided with medical certificates although they were not, in fact, incapable of work," and he said this not merely with regard to the period of the coal dispute, but more generally. Mr. R. J. Meller, M.P., another official of the Prudential Assurance Company, went further, and, according to the report, said: "They must insist that doctors perform their duties with greater honesty." Accusations against the general body of the medical profession of lack of honesty and of a widespread giving of false certificates cannot be allowed to pass unchallenged. In so far as the abnormal conditions of the coal dispute are concerned, we have dealt fully with the subject in a leading article in the JOURNAL of February 26th last (p. 390), where it was shown that the matter could not be explained by the simple and offensive hypothesis now enunciated by Messrs. Thompson and Meller. In their more general application, accusations of this type are not in accordance with the facts, and they have been effectively dealt with before the Court of Inquiry into the capitation fee and at other times. Their continued repetition by a section of approved society officials cannot fail to hinder that harmonious co-operation between insurance practitioners and other workers in the sphere of National Health Insurance which is so desirable, and which, we hoped, was being obtained.

Indigenous Medicine in Ceylon.

A committee was recently appointed by the Government of Ceylon to report on the practicability of providing Government assistance in the training of practitioners of the indigenous systems of medicine and in the investigation of the medicinal value of drugs used in the practice of such systems; and to prepare for the consideration of the Government a detailed scheme for such training and investigation as might be considered practicable. The report of the committee, dated October, 1926, was considered by the Dominions Committee of the British Medical Association at its last meeting. The adoption of the majority report would involve the recognition and the subsidization of the Ayurvedic and Unani systems at the expense of the progress of scientific medicine. The Dominions Committee views such a possibility with the very gravest anxiety. It is in communication with the Ceylon Branch on the subject, and is making urgent representations both to the Colonial Office and to the General Medical Council.

Edinburgh Meeting: Section of Medical Sociology.

The names of the officers of this Section and of the other twenty Sections are printed in the SUPPLEMENT this week. The personnel of the Medico-Sociological Section has, it will be noted, a strong bearing on the subject chosen for discussion: "The future relationship of the municipalities to the voluntary hospitals of this country." It is believed that the subject is particularly topical in view of the proposed reform of the Poor Law system, and those who wish to take part in the discussion should communicate with one of the secretaries of the Section.

Association Notices.

TABLE OF DATES.

Mar. 28, Mon.	Nomination papers available at Head Office for election of 24 members of Council by grouped Branches in British Isles; and 2 Public Health Service members of Council and 4 Representatives of Public Health Service in Representative Body.
April 5, Tues.	*Council* (afternoon).
April 6, Wed.	*Council.*
April 23, Sat.	Annual Report of Council appears in SUPPLEMENT.
	Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members, for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 7, Sat.	Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.
May 10, Tues.	Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
May 14, Sat.	*Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.*
	Publication in SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
	Last date for election of Representatives and Deputy Representatives.
May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members.
	Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	*Supplementary Report of Council appears in SUPPLEMENT.*
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m.
	Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh).
	A.R.M. (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh).
	Meetings of Sections, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BIRMINGHAM BRANCH: DUDLEY DIVISION.—A meeting of the Dudley Division will be held jointly with the Stourbridge Medical Society at the Corbett Hospital, Stourbridge, on Thursday, April 7th, at 8.30 p.m. Agenda.—*Dudley Division:* Election of representative for Dudley and Bromsgrove constituency; medical charities; registration of maternity homes; Coroners Amendment Act, 1926; reports of Executive. *Stourbridge Medical Society:* Arrangements for Annual Meeting; paper by Dr. T. M. Tibbetts on "Quackery and stunts in modern practice." *Coffee and light refreshments will be provided.*

BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.—A meeting of the Nuneaton and Tamworth Division will be held at the Nuneaton General Hospital on Wednesday, April 6th, when a paper will be read by Dr. P. C. Cloake.

BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.—The second regular meeting of the West Bromwich Division will be held at the District Hospital, West Bromwich, on Tuesday, April 5th, at 3 p.m. Agenda: Consultants in puerperal fever and pyrexia cases; Coroners Amendment Act, 1926; circulating library; medical charities; Dr. Lewis Graham (Birmingham) will read a paper on "Some points in the conduct of midwifery in private practice."

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—A meeting of the Bournemouth Division will be held at St. Peter's Small Hall, Bournemouth, on Thursday, April 7th. Dr. Robert Hutchison will give a British Medical Association Lecture on "Diet in infancy and childhood."

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—A meeting of the West Dorset Division will be held at the Weymouth and District Hospital on Thursday, March 31st, at 8 p.m. Cases will be shown and discussed. A discussion on "Pain in the right iliac fossa" will be opened by Mr. J. Whittingdale, F.R.C.S. The representative and deputy representative of the Division to the Annual Representative Meeting will also be elected.

ESSEX BRANCH: MID-ESSEX DIVISION.—The annual general meeting of the Mid-Essex Division will be held to-day (Friday, March 25th), at the Bell Hotel, Chelmsford, at 3 p.m. Agenda: (1) Report of the year's work. (2) Election of officers for 1927; lantern slides will be shown by the chairman, Dr. R. H. Vercoe, on: (*a*) Vitamin deficiency diseases; (*b*) On the mountains of Tyrol.

FIFE BRANCH.—The annual meeting of the Fife Branch will be held at the Station Hotel, Kirkcaldy, on Thursday, March 31st, at 3 p.m. Agenda: Report of Branch Council; election of office-bearers and Branch Council; arrangements for clinical meetings for winter of 1927-28; business of Annual Representative Meeting; Annual Meeting of Association in Edinburgh—excursions to Fife and Guarantee Fund. The last clinical meeting of the session will follow at 4 p.m., when Professor Price (Dundee) will give an address on congenital deformities. The annual dinner will be held at the same place at 5.30 p.m.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.—A meeting of the Lanarkshire Division will be held at Dalzell House on *Wednesday, April 6th*, at 3 p.m., when a visit will be paid to Lord Hamilton of Dalzell's model farm.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E.3, on Tuesday, April 5th, at 9.30 p.m. Mr. Russell Howard, F.R.C.S., surgeon to the London Hospital, will read a paper on "The diagnosis and treatment of mammary swellings." A cordial invitation is extended to non-members.

METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, April 5th, at 8.45 p.m. Dr. J. A. Hadfield will give an address on "Child psychology and the psychoneuroses."

METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.—A clinical meeting of the Hendon Division will be held at the Hendon Cottage Hospital to-day (Friday, March 25th), at 8.30 p.m. Mr. J. F. O'Malley, F.R.C.S. (surgeon to the Ear, Nose, and Throat Department, University College Hospital), will give an address on "Some recent advances in diseases of the ear, nose, and throat."

METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.—At the meeting of the North Middlesex Division on March 30th Dr. G. W. H. French will read a paper on "Differential diagnosis of the acute abdomen."

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House on Tuesday, April 12th, at 9 p.m., when Dr. Geoffrey Evans will discuss the treatment of high blood pressure.

METROPOLITAN COUNTIES BRANCH: SOUTH MIDDLESEX DIVISION.—A meeting of the South Middlesex Division will be held at St. John's Hospital, Twickenham, on Wednesday, April 6th, at 3.15 p.m., for general business. At 3.30 p.m. Dr. John Bell (Hammersmith) will read a paper on "Some difficulties met with in midwifery practice." Tea will be provided.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—A meeting of the South-West Essex Division will be held at the Walthamstow Hospital on Tuesday, March 29th, at 3.30 p.m. Dr. G. F. Still will give an address on "Vomiting in childhood."

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield [illegible] will be held at the Maternity Hospital, Chesterfield, " 25th), at 8.15 p.m. Mr. A. M. Webber, surg " Hospital, will give an address on "Observations on hysterectomies." Tea and coffee will be served at 8 p.m.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.—The Blyth Division is holding a dinner, at which Dr. Alfred Cox will be present, on Thursday, March 31st, at the Star and Garter Hotel, Blyth, at 7.30 for 8 p.m. Members of the Morpeth Division are invited to be present. Price of dinner (exclusive of wine), 10s.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—A reception and dance will be held by the Newcastle-on-Tyne Division at the College of Medicine, Newcastle-on-Tyne, on Thursday, March 31st, at 8.30 p.m. to 1 a.m. Dr. and Mrs. A. Livingston will receive the guests. During the evening a cabaret show will be given by the College of Medicine Concert Party, and arrangements will be made for those desiring to play cards. Light refreshments will be available. Cars may be parked in Northumberland Road, east of the College of Medicine, and in Ellison Place. Tickets 5s. each. Members are asked to make early application.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, April 20th, at 8.15 p.m. Dr. E. Farquhar Murray will give an address on "Some modern aspects of midwifery and gynaecology." All members of the Division are invited to be present.

SOUTH-WESTERN BRANCH.—An intermediate meeting of the South-Western Branch will be held on Thursday, March 31st, at Torquay.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.—The next meeting of the [illegible] Division will be held at the Queen's Hotel, " April 7th, at 9.30 p.m., when Professor " n address on "The medical treatment of gastric diseases." The meeting will, as usual, be preceded by supper at 9 o'clock precisely. Members intending to be present at supper are particularly requested to notify the honorary secretary, Dr. H. H. Warren, Devonia, Goldsmith Avenue, Southsea, on or before Monday, April 4th.

STAFFORDSHIRE BRANCH: SOUTH STAFFORDSHIRE DIVISION.—At the meeting of the South Staffordshire Division to be held on Tuesday, March 29th, Dr. T. Watts Eden, F.R.C.P., will give a British Medical Association Lecture on "Prevention and treatment of eclampsia."

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.—A meeting of the South Suffolk Division will be held at the Crown and Anchor Hotel to-day (Friday, March 25th), at 3.30 p.m. Agenda: Business arising out of minutes; British Medical Association monthly circular; Dr. H. N. Baron will open a discussion on "The need for closer co-operation between hospital staffs and general practitioners."

SURREY BRANCH: GUILDFO[illegible]day will open a discussion at a combi[illegible] Division and the Veterinary Medical [illegible]s Branch, on clean milk, to be held on May 19th. Further particulars will be announced later.

SURREY BRANCH: REIGATE DIVISION.—A clinical meeting of the Reigate Division will be held at the Caterham Cottage Hospital on Wednesday, April 13th, at 4 p.m.

SUSSEX BRANCH: BRIGHTON DIVISION.—A combined meeting of the Brighton and District Section of the British Dental Association and the Brighton Division will be held at the Queen's Road Dispensary, Brighton on Tuesday, March 29th, at 8.30 p.m. Mr. R. J. Hooker will open a discussion on dental anaesthesia. It is hoped that as many members as possible of both bodies will attend and take part in the debate.

SUSSEX BRANCH: HASTINGS DIVISION.—The next meeting of the Hastings Division will be held at the Queen's Hotel, Hastings, on Tuesday, April 5th, at 8.15 p.m. Coffee will be served immediately before the meeting. Mr. H. E. Marsh, L.D.S., will read a paper on "Collaboration of medical and dental practitioner in dental practice." The meeting is being held jointly with the local section of the British Dental Association, and all members of that association are cordially invited to attend and take part in the discussion.

YORKSHIRE BRANCH: WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Bull Restaurant, Westgate, Wakefield, on Thursday, April 7th. Mr. G. L. Wilkinson (honorary clinical lecturer, Leeds University Dental School) will read a paper on "Conservative dentistry." Dental friends are invited. Supper at 7.45 p.m. (2s. 6d.) will precede the meeting.

Meetings of Branches and Divisions.

ASSAM BRANCH.

THE annual general meeting of the Assam Branch was held at Haflong on January 14th and 16th, with Dr. D. P. WILLIAMS, President of the Branch, in the chair. With reference to the question of unregistered practitioners in tea gardens, a resolution was passed calling attention to the injustice of dismissing those who are not now registerable under the Registration Act, although they had obtained medical qualifications previously. The present unregistered practitioners employed in tea gardens could not be replaced, since there were insufficient registered practitioners for the purpose. It was agreed that the Branch should approach the Government with a view to improving the training of registered practitioners. It was decided to form two autonomous and separate Divisions for Assam and the Surma Valley. The Branch secretary was asked to invite the Indian Tea Association to obtain from the Calcutta School of Tropical Medicine a research worker to inquire into the etiology of "naga sores." Dr. McLaren was elected president of the Branch for the ensuing year, and Dr. E. A. Goldie secretary of the Branch and also of the Assam Division. Dr. Dunlop was elected honorary secretary of the Surma Valley Division.

An address was delivered by the PRESIDENT, and Lieut.-Colonel PALMER read a paper on sporadic cholera in Cachar, and its association with a hitherto undescribed type of organism. This paper was discussed by Dr. D. P. WILLIAMS, Dr. F. W. O'CONNOR, and Dr. DE COURCY BENNETT. Dr. O'CONNOR read papers by Lieut.-Colonel Hodgson on the present position of anticholera vaccination, and by Dr. P. Foster on the importance of the early recognition of kala-azar. Dr. J. DUNLOP opened a discussion on the employment of trained Indian midwives in tea gardens with a view to reducing the high mortality and unnecessary loss of life of pregnant women. Dr. MEEK stated that in Cachar a child welfare scheme, involving the training of midwives, had been tried with success, and Dr. HOMER stated that the Assam Bengal Railway had employed two trained midwives in Lumding with satisfactory results. Dr. MCLAREN doubted whether the provision of a crèche would be popular, and suggested that trained midwives should be attached to garden hospitals. Dr. O'CONNOR believed that European women doctors or midwives would be more successful than those trained in India, and Dr. WILLIAMS agreed that this proposal was probably the best solution of a difficult problem.

MIDLAND BRANCH: CHESTERFIELD DIVISION.

THE annual dinner of the Chesterfield Division was held on March 9th. The chairman of the Division, Dr. MCGINNIS, presided, and was supported by numerous members and friends, included amongst the latter being Dr. Cox, Medical Secretary of the Association, who was the official guest of the Division; Dr. Hollies, President of the Shropshire and Mid-Wales Branch; and Dr. Nicholson, county tuberculosis officer.

The principal toast, "The British Medical Association," was proposed by Dr. PECK, who alluded to the good work done by the Divisions and at headquarters, special reference being made to the executive officers, and particularly to Dr. Cox, whose name he coupled with the toast.

Dr. Cox, in his reply, gave an account of some of the work at headquarters, and told some interesting stories of his travels in South Africa. Referring to the idea, prevalent amongst trade unionists, that the British Medical Association was a powerful trade union, he defined the exact position of the Association as being, not a trade union in the usual sense of the term, but an Association for the protection of its members, when such protection was not in antagonism to the interests of the public. The interests of the public were, and always must be, the first consideration. Dr. Cox referred in complimentary terms to the work of the Chesterfield Division, and expressed his pleasure at being able to be present on that occasion.

The CHAIRMAN then, on behalf of the Division, presented Dr. Pooler, honorary secretary, with a case of table silver inscribed as follows:

"Presented to Dr. H. W. Pooler by the Members of the Chesterfield Division of the British Medical Association, as a mark of their appreciation of his invaluable services as Honorary Secretary, March 9th, 1927."

Dr. MCGINNIS, in making the presentation, referred to Dr. Pooler's devoted and strenuous work for the Division, and stated that the gift was a mark of the gratitude, the respect, and the affection which Dr. Pooler had so worthily earned from his professional colleagues in the district. He asked those present to drink to his long life and happiness.

After the toast had been drunk with musical honours Dr. POOLER, in reply, said how much he appreciated the gift, not only for its intrinsic value, but for the spirit in which it had been offered. He gave a short history of the Division, which he stated was only founded in 1912, but owing to the national insurance agitation, and the great war, had really had no opportunity of development until after the armistice, soon after which he had been appointed secretary. There had, therefore, being a good deal of spade-work for the secretary, which would have been done equally well, or better, by any other secretary. He then gave a short summary of the work of the Division since 1918, alluding to the post-graduate classes, the clinical and pathological evenings, and the successful terminations of the three disputes with the local miners' sick clubs. In conclusion he said how, amidst all the difficulties and disappointments of general practice, in spite of set-backs, and sometimes even of gross ingratitude, the poorest and weakest practitioner had one great reward, greater than in any other profession, except perhaps in the clerical one—the gratitude and affection of his neighbours and fellow citizens; a reward which almost inevitably came to every medical practitioner in greater or less degree. But it was a much more difficult matter for a general practitioner to obtain the esteem and confidence of his professional colleagues, and it was because he himself regarded the presentation as evidence that he had secured such a position in the eyes of his colleagues that the gift would always be to him and his family a possession beyond price.

Other toasts given were "The Visitors" and "The Chairman," and the programme included a very fine selection of music by Messrs. Askew, Hartley, and Heath.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships, as follows:

> A Scholarship, known as the ERNEST HART MEMORIAL SCHOLARSHIP, of the annual value of not more than £200, and three other RESEARCH SCHOLARSHIPS, each of the annual value of not more than £150, for research in any subject (including State Medicine) relating to the Causation, Prevention, or Treatment of Disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1927. A Scholar may be reappointed for not more than two additional terms. *A Scholar may hold a junior appointment at a University, Medical School, or Hospital* provided the duties of such appointment do not interfere with his work as a Scholar.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

Applications.

Applications for Scholarships and Grants for the year 1927–28 *must be made not later than Saturday, June 4th, 1927*, on the prescribed form, a copy of which will be supplied by the Medical Secretary on application. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated to whom reference may be made.

March 5th, 1927. ALFRED COX, *Medical Secretary.*

GENERAL MEDICAL COUNCIL.

EXECUTIVE COMMITTEE.

THE Executive Committee of the General Medical Council met on February 28th under the presidency of Sir DONALD MACALISTER, and the minutes have now been issued.

Notification was received of the reappointment of the following members of the Council: Dr. John Y. Mackay (University of St. Andrews), Sir Arthur Chance (Royal College of Surgeons in Ireland), Mr. H. L. Eason (University of London). The Registrar reported that the names of twenty-six persons had been restored to the *Medical Register*, from which they had been erased under Section 14 of the Medical Act, 1858, because of failure to reply to inquiries as to cessation of practice or change of address. The Senior Treasurer presented the audited statements of receipts and expenditure, and the balance sheets of the General and Branch Councils for the year 1926. These accounts, which have been transmitted to the Lord President of the Privy Council to be laid before Parliament, are printed with the minutes in tabular form as an appendix.

Irish Free State.

The Privy Council transmitted a copy of a bill which was passed recently by both Houses of the Oireachtas of the Irish Free State, and received the Royal Assent on February 11th. The new Act gives power to prolong the operation of the Medical Act, 1925, for a limited period after February 21st, 1927. Under it the Executive Council of the Saorstat Eireann may continue the principal Act in force for one month from that date, and thereafter by subsequent orders until at latest June 21st, 1927. Thus the previous arrangement, by which the Medical Acts of this country are made applicable to Southern Ireland, is maintained for the time being.

Calcutta University.

The Committee heard with pleasure that the Vice-Chancellor of the University of Calcutta had reported to the President that that University has adopted all the suggestions for the improvement in instruction and standard of examination made by the Council in 1924. These have been embodied in regulations passed by the Senate, and come into operation this year.

Mauritius.

A communication was received from the Colonial Office transmitting for the observations of the Council a proposed bill to regulate the practice of medicine and surgery in the colony of Mauritius. The Committee expressed satisfaction at learning from this that Mauritius is taking steps to prevent the practice of medicine by unqualified persons.

British Institute of Radiology.

In May, 1921, the Board of Trade was in communication with the General Medical Council regarding an application from the British Institute of Radiology for registration without the use of the word "Limited." A further letter from the Board of February 14th, 1927, referred to a proposed alteration in the Memorandum and Articles of Association of the Institute and its proposed change of name to the "British Institute of Radiology, incorporated with the Röntgen Society." The Committee recorded approval of No. 12 of the Articles of Association:

"No member or associate who is not a registered medical or dental practitioner shall accept patients for medical diagnosis or treatment except under the personal supervision of a registered practitioner,"

and expressed the opinion that Section 3 (c) of the Memorandum of Association, which provides for granting diplomas and certificates of merit and efficiency, should be amended by the following words:

"and that the holder of such diploma or certificate is not thereby entitled to undertake the medical diagnosis or treatment of patients except under the personal supervision of a registered practitioner."

Drugs used by Midwives.

The Committee having before it a resolution adopted by the Central Midwives Board on January 6th last regarding the use of drugs by midwives, recorded the opinion that it is expedient that the rules of the Central Midwives Board should include provisions restricting the drugs and solutions to be used by midwives in their practice. This resolution is being forwarded to the Ministry of Health, the Scottish Board of Health, and the Ministry of Home Affairs for Northern Ireland.

Correspondence.

Spa Treatment for Insured Persons.

SIR,—The report of the conference on spa treatment for insured persons published in the SUPPLEMENT of March 12th (p. 85) presents many points of interest, and draws attention to statements which require careful consideration.

It is pointed out that since the publication of the report on "The incidence of rheumatic diseases" in 1924 by the Ministry of Health more attention has been drawn to the benefits derived from spa treatment in rheumatic conditions. The Ministry of Health report stated that nearly one-sixth of the industrial invalidity of this country is due to diseases classed as "rheumatic," and that each year these diseases are costing the approved societies nearly £2,000,000 in sick benefit, and the nation over 3,000,000 weeks of work from the insured population alone, and, further, this loss both in money and time is due to chronic joint disease. Various lines of action have been proposed for dealing with this problem, but here I only propose to deal with some factors in connexion with spa treatment.

For this form of treatment to be successful, accurate diagnosis and careful selection of cases are essential. It is certain that in suitable cases physiotherapeutic measures of treatment are efficacious. Physiotherapeutic methods consist of the use of natural forces such as light, heat, air, water, electricity, and exercise. Some of these—for example, balneotherapy—require a large and expensive installation, and where "baths" are extensively given, either alone or in combination with other modes of physiotherapy, the term "spa treatment" is in more or less general use.

At the recent conference spa treatment was defined as "treatment at a place possessing a supply of natural mineral waters of known therapeutic value, and facilities for their application," and, further, one of the essential rules for admission of any place to the British Spa Federation is "the possession of natural mineral waters showing on analysis a proper therapeutic value." It would be easy to criticize these definitions, and it is interesting to note that sea water, which is a natural mineral water of the muriated or chloride class, is not recognized under either.

Several spa physicians have drawn attention to the fact that nearly every spa—irrespective of the analysis of their various mineral waters—claims to be useful in the treatment of rheumatic disorders and arthritis, and it is certain that they are all correct; and I think we may go further, and state that every place giving "spa treatments" under suitable supervision can fairly make the same claim.

In an article in the *Prescriber* (March, 1926) I wrote:

"The term spa treatment has not the limited connotation frequently applied to it—the internal and external treatment by means of a natural mineral water. All spas have a natural mineral water, although in some the mineral content is extremely small, but they do not limit their treatment to the internal and external use of waters. At many a considerable percentage of prescriptions consist of electricity, massage, exercises and accessory treatments, combined with advice as to diet and other essentials."

And I may add that it has not been proved that for external hydrotherapeutic treatment natural mineral waters are superior to ordinary water, or that highly concentrated brines are superior to sea water.

Starling, in his *Textbook of Physiology*, writes:

"In order to test the alleged influence of baths containing medicinal substances in solution, many experiments have been made to determine whether absorption is possible by the skin. It may be regarded as established that the uninjured skin is impermeable for watery solutions of salts or other substances."

In Holland the "spas" are entirely sea-water resorts, and rheumatic patients are treated with good results, and there are several places in the British Isles where good results are obtained with the use of ordinary water; also, during and after the war soldiers suffering from rheumatic conditions were treated successfully at hydrological departments in hospitals.

In the rheumatic group of diseases it is the external balneological methods of treatment that prove most beneficial, either alone or when combined with other physiotherapeutic measures.

The therapeutic effects of baths are due to the temperature and pressure of the water, the duration of the bath, and the

immediate after-treatment, and it is not, in my opinion, essential that spa treatments should only be given "at a place possessing a supply of natural mineral water." If this is agreed the position is simplified, as it would not be possible for the federated spas or our mineral water hospitals with their present facilities to deal with more than a proportion of the rheumatic insured population.

If a definite scheme is to be finally adopted for the giving of "spa treatments" to the insured, it will be necessary also to utilize facilities which at present exist outside of the British Spa Federation, and to form clinics in large industrial centres with adequate apparatus for the giving of treatment by physical methods under medical supervision.—I am, etc.,

K. R. COLLIS HALLOWES, M.B.

Torquay, March 15th.

Anaesthetic Fees.

SIR,—It is probably worth while at once to correct the statement made by Dr. Standley in his letter in the SUPPLEMENT of March 19th (p. 94) that for the service of administering anaesthetics an insurance practitioner "is in receipt of sixpence for every patient on his panel list." There is no such provision. The remuneration for this service is included in the general capitation fee, but its separate evaluation has never been attempted. I have not hitherto met this particular delusion among the many that are prevalent with regard to "medical benefit," but, whether widely held or no, it should be corrected. —I am, etc.,

London, N.W.11, March 19th. H. B. BRACKENBURY.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders D. D. Turner is placed on the retired list with the rank of Surgeon Captain; P. N. Button, O.B.E., to the *Columbine* for Port Edgar Naval Base.

Surgeon Lieutenant Commanders N. A. H. Barlow to the *Bryony*; W. J. McB. Allen to the *Comus*; I. W. Gammell to the *Malabar* for R.N. Hospital, Bermuda.

Surgeon Lieutenants N. A. Dickinson to the *Tamar*; P. J. Maguire to the *Victory* for R.N. Hospital, Haslar, temporary, supernumerary, March 14th, and to the *Pembroke* for R.M. Infirmary, Deal, April 2nd; A. P. Anderson-Stuart to the *Godetia*; T. Prentice to the *Fitzroy*; P. H. Deeny to the *Kellett*.

Surgeon Lieutenant L. R. Sorley (short service) has transferred to the permanent list.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant Commander L. C. D. Irvine to the *Champion* for twenty-one days' training.

Surgeon Lieutenant C. C. Elliott, D.S.C., to the *Victory* for Haslar Hospital for fourteen days' training.

Probationary Surgeon Lieutenant R. J. Matthews to be Surgeon Lieutenant.

ROYAL ARMY MEDICAL CORPS.

W. T. Baker to be temporary Lieutenant.

Lieutenant W. V. Harke, late T.A., Reserve of Officers, to be temporary Lieutenant.

ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant V. R. Smith is promoted to the rank of Squadron Leader.

Flying Officer D. B. Smith is promoted to the rank of Flight Lieutenant.

A. L. StA. McClosky is granted a short-service commission as a Flying Officer, for three years on the active list, and is seconded for civil employment at the Princess Alice Memorial Hospital, Eastbourne.

R. Thorpe is granted a short-service commission as a Flying Officer for three years on the active list.

REGULAR ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Colonel A. H. Morris, C.I.E., C.B.E., late R.A.M.C., having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Lieutenant A. Badenoch to be Captain (prov.).

Lieutenant D. A. Davies, late Welsh Guards Special Reserve, to be Lieutenant.

Second Lieutenant D. J. MacMyn, from the General List (unposted), T.A., to be Lieutenant.

VACANCIES.

BIRKENHEAD GENERAL HOSPITAL.—Casualty House-Surgeon (male). Salary £100 per annum.

BRIGHTON: THE LADY CHICHESTER HOSPITAL FOR EARLY NERVOUS BREAKDOWN.—Medical Woman as House-Physician, and also a Junior. Salary at the rate of £100 and £50 per annum respectively.

CHARING CROSS HOSPITAL, W.C.2.—Assistant Obstetric Physician.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum.

GLAMORGAN COUNTY COUNCIL.—Dental Surgeon (woman). Salary £500 per annum, rising to £700.

HERTFORD COUNTY HOSPITAL.—House-Physician (male). Salary at the rate of £150 per annum.

HOSPITAL FOR EPILEPSY AND PARALYSIS, Maida Vale, W.9.—(1) Honorary Gynaecologist. (2) Resident Medical Officer. (3) House-Physician. Salary for (2) and (3) £150 and £100 per annum respectively.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—(1) House-Surgeon. (2) House-Physician and Assistant Casualty Officer. Salary £50 for six months each.

HULL ROYAL INFIRMARY.—(1) Honorary Physician. (2) Honorary Assistant Surgeon to Nose, Throat, and Ear Department.

LEEDS GENERAL INFIRMARY.—Assistant Medical Officer for Venereal Diseases Department. Salary £500 per annum.

LEWISHAM: ST. JOHN'S HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum.

LIVERPOOL AND DISTRICT HOSPITAL FOR DISEASES OF THE HEART.—House-Physician for six months.

LONDON UNIVERSITY.—University Chair of Anatomy tenable at King's College. Salary £1,000 a year.

MANCHESTER CITY.—Two Junior Medical Assistants at the Monsall Hospital for Infectious Diseases (males, unmarried). Salary £350 per annum.

METROPOLITAN ASYLUMS BOARD.—Junior Assistant Medical Officer at the High Wood Hospital for Children, Brentwood. Salary £500 per annum.

MIDDLESEX HOSPITAL, W.1.—Assistant Radiologist (Diagnostic). Salary £100 per annum.

PADDINGTON GREEN CHILDREN'S HOSPITAL, W.2.—(1) House-Physician. (2) House-Surgeon. (Males, unmarried.) Salary at the rate of £150 per annum each.

PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—Casualty House-Surgeon (unpaid).

British Medical Association.

CURRENT NOTES.

Committee Work at Headquarters.

Scheme for Group Organization within the Association.

HE problem of giving due weight within the Association to the sectional interests that have developed so quickly in ecent years with the increasing specialization of the pro- ession is felt to be one of ncreasing urgency. At its eeting on March 15th the rganization Committee pproved the principles mbodied in a memoran- um on the subject by the ledical Secretary. The ommittee proposes to ork out a detailed scheme n the general lines laid own in this memoran- um, and meanwhile is ecommending the Council o move the Representa- ive Body to approve the ecessary constitutional rovision. The basis of the uggested scheme is the reation within the Asso- iation of special groups of embers who, whilst they ave common interests ufficiently distinct from hose of the general body f members to warrant uch a course, are so few n number or so scattered s to be unable in existing ircumstances to meet for he discussion of those nterests or to secure ade- uate expression of their iews through the Divi- ional machinery of the Association.

Co-operation with other Scientific Societies.

Another question of considerable interest before the Organization Committee was an instruction given to the Council by the Representative Meeting last year to consider and report "to what extent and under what conditions could financial and other assistance be given to Branches and Divisions of the Association in the United Kingdom which may desire to invite societies formed for the promotion of medical and/or allied sciences to hold conferences within their respective areas." The conclusion of the Committee was that special financial provision for such activities was not desirable, but an incidental review of the position in this connexion showed a welcome increase in the amount of co-operation between the Branches and Divisions and other scientific or professional associations within their areas.

Fiftieth Anniversary of the Jamaica Branch.

The Jamaica Branch, the first Oversea Branch of the British Medical Association, will celebrate its fiftieth birthday in December next. The Organization Committee is in communication with the Branch as to suitable local celebrations of this interesting event.

Medico-Political Committee.

The business before the Medico-Political Committee at a session which extended from noon on March 10th until late in the evening included the final approval for presentation to the Council of memorandums on orthopaedic hospitals and clinics and on remuneration and conditions of service of medical officers of public schools. The latter subject was discussed by the Council at its meeting on December 15th last, when it was referred back for further consideration and revision. It is the work of a special subcommittee in the personnel of which a due share has been given to the medical officers concerned.

The Medico-Political Committee is making further representations to the Ministry of Health as to the position of members of local authorities who are in receipt of fees for medical work paid for by those authorities. At present it seems doubtful how far such a position is tenable under Section 12 of the Municipal Corporations Act of 1882. A deputation discussed this matter with representatives of the Ministry of Health in November last. The Committee is also keeping a close watch upon developments in connexion with the Bill for the Registration of Nursing Homes introduced by

LISTER CENTENARY CELEBRATIONS IN LONDON.

Academic Dress.

At the reception of delegates in the British Medical Association's House on April 5th, and at the memorial service in Westminster Abbey on April 6th, *morning dress* will be worn with or *without academic* robes. Members of the British Medical Association wishing to hire academic dress should intimate their desire to the official robe providers for the Association, Messrs. Ede and Ravenscroft, 93 and 94, Chancery Lane, W.C.2. Accommodation for robing will be provided at Tavistock Square, where representatives of Messrs. Ede and Ravenscroft will be in attendance on April 5th with the robes ordered.

Mrs. Philipson on February 11th last. The bill was printed on March 25th and is down for second reading on April 1st.

Second Report on Rheumatic Heart Disease.

The Rheumatic Heart Disease Subcommittee of the Science Committee has finally approved its second report, which is being circulated to members of the parent committee prior to its presentation to the Council.

Charing Cross Hospital Institute of Pathology: Appointment of Whole-time Pathologist.

We are glad to be able to report that the *Important Notice* regarding the post of assistant pathologist at Charing Cross Hospital has been removed owing to amended terms of appointment which have now been submitted. The assistant pathologist will be paid at the rate of £500 per annum for a probationary period of six months, after which the salary will rise to £600 per annum.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH.—A meeting of the Bath and Bristol Branch will be held at the Cottage Hospital, Wells, on Thursday, April 7th, at 3 p.m. Mr. C. F. Walters will open a discussion on the treatment of empyema.

BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.—The second regular meeting of the West Bromwich Division will be held at the District Hospital, West Bromwich, on Tuesday, April 5th, at 3 p.m. Agenda: Consultants in puerperal fever and pyrexia cases; Coroners Amendment Act, 1926; circulating library; medical charities; Dr. Lewis Graham (Birmingham) will read a paper on "Some points in the conduct of midwifery in private practice."

CAMBRIDGE AND HUNTINGDON BRANCH.—A meeting of the Cambridge and Huntingdon Branch will be held at Addenbrooke's Hospital, Cambridge, to-day (Friday, April 1st), at 2.30 p.m. The meeting will be devoted to the exhibition of clinical cases and pathological specimens.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—A meeting of the Bournemouth Division will be held at St. Peter's Small Hall, Bournemouth, on Thursday, April 7th, at 4.15 p.m. Tea at 4 o'clock. Dr. Robert Hutchison, physician to the London Hospital, will give a British Medical Association Lecture on "Diet in infancy and childhood."

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.—A meeting of the Lanarkshire Division will be held at Dalzell House on Wednesday, April 6th, at 3 p.m., when a visit will be paid to Lord Hamilton of Dalzell's model farm.

LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.—Professor Ralph Stockman (Glasgow) will give a British Medical Association Lecture on fibrositis at a meeting of the Southport Division to be held at 52, Hoghton Street, Southport, on Friday, April 8th, at 8 p.m. It is hoped that local practitioners will take the opportunity of hearing the lecture.

METROPOLITAN COUNTIES BRANCH: CHELSEA DIVISION.—A general meeting of the Chelsea Division will be held in the Fulham Town Hall on Wednesday, April 6th, at 9 p.m. Mr. Leonard Phillips, F.R.C.S., surgeon to Soho Square and to Queen Charlotte's Hospitals, will give an address on "Common errors of diagnosis in gynaecological practice."

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E.3, on Tuesday, April 5th, at 9.30 p.m. Mr. Russell Howard, F.R.C.S., surgeon to the London Hospital, will read a paper on "The diagnosis and treatment of mammary swellings." A cordial invitation is extended to non-members.

METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, April 5th, at 8.45 p.m. Dr. J. A. Hadfield will give an address on "Child psychology and the psychoneuroses." Members are asked to make every effort to be present.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House on Tuesday, April 12th, at 9 p.m., when Dr. Geoffrey Evans will discuss the treatment of high blood pressure.

METROPOLITAN COUNTIES BRANCH: SOUTH MIDDLESEX DIVISION.—A meeting of the South Middlesex Division will be held at St. John's Hospital, Twickenham, on Wednesday, April 6th, at 3.15 p.m., for general business. At 3.30 p.m. Dr. John Bell (Hammersmith) will read a paper on "Some difficulties met with in midwifery practice." Tea will be provided.

METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.—A clinical meeting of the Tower Hamlets Division will be held at St. Peter's Hospital, Vallance Road, E.1, on Wednesday, April 6th, at 3.45 p.m., when Dr. Randle, medical superintendent, and the staff will show interesting cases, followed by a discussion. During the afternoon there will also be a demonstration of border-line mental cases, of special interest to the general practitioner, by Dr. E. Mapother, the visiting physician for mental diseases. Tea will be served.

MIDLAND BRANCH: KESTEVEN DIVISION.—A meeting of the Kesteven Division will be held at the Abbey House, Grantham, on Tuesday, April 5th, at 3.15 p.m., to consider the analysis of non-members; action in reference to the Dogs' Protection Bill; B.M.A. Charities; nomination of officers for the ensuing year. Grantham members are particularly requested to attend this meeting in order that the proposition of having a resident midwife at the Victoria Nursing Home may be discussed.

NORTH OF ENGLAND BRANCH: GATESHEAD DIVISION.—A regular meeting of the Gateshead Division will be held at 9, Walker Terrace, Gateshead, to-day (Friday, April 1st), at 8.15 p.m. Agenda: Business arising out of minutes; correspondence; report of the contract practice practitioners' special meeting, and any other business relating thereto.

NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.—A meeting of the North Northumberland Division will be held in the Alnwick Infirmary, to-day (Friday, April 1st), at 2.45 p.m. At the close of the business meeting an address will be given by Dr. Frank Wilson, entitled "A talk about nose, throat, and ear work," which will be illustrated with blackboard diagrams, etc. Tea will be provided at the close of the proceedings.

NORTH WALES BRANCH.—The spring meeting of the North Wales Branch will be held on Tuesday, April 19th, at Pwllheli. Members wishing to read papers or show cases should communicate with Dr. E. Lewys-Lloyd, Branch secretary (Rhianfa, Towyn, Merioneth), not later than April 8th.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.—The next meeting of the Portsmouth Division will be held at the Queen's Hotel, Southsea, on Thursday, April 7th, at 9.30 p.m., when Professor H. Maclean will give an address on "The medical treatment of gastric diseases." The meeting will, as usual, be preceded by supper at 9 o'clock precisely. [illegible] retary, Dr. H. H. Warren, Devonia, [illegible], on or before Monday, April 4th.

SURREY BRANCH: REIGATE DIVISION.—A clinical meeting of the Reigate Division will be held at the Caterham Cottage Hospital on Wednesday, April 13th, at 4 p.m.

SUSSEX BRANCH: HASTINGS DIVISION.—The next meeting of the Hastings Division will be held at the Queen's Hotel, Hastings, on Tuesday, April 5th, at 8.15 p.m. Coffee will be served immediately before the meeting. Mr. H. E. Marsh, L.D.S., will read a paper on "Collaboration of medical and dental practitioner in dental practice." The meeting is being held jointly with the local section of the British Dental Association, and all members of that association are cordially invited to attend and take part in the discussion.

WILTSHIRE BRANCH: TROWBRIDGE DIVISION.—The annual general meeting of the Trowbridge Division will be held at Trowbridge Town Hall on Wednesday, April 13th, at 3 p.m. Agenda: Election of officers; annual report; puerperal fever regulations; medical charities. Tea will be served after the meeting.

YORKSHIRE BRANCH: WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—A meeting of the Wak[illegible] Castleford Division will be held at the Bull [illegible] Wakefield, on Thursday, April 7th. Mr. G. [illegible] clinical lecturer, Leeds University Dental School) will read a paper on "Conservative dentistry." Dental friends are invited. Supper at 7.45 p.m. (2s. 6d.) will precede the meeting.

Meetings of Branches and Divisions.

EDINBURGH BRANCH: SOUTH-EASTERN COUNTIES DIVISION.

THE annual dinner of the South-Eastern Counties Division was held in the Douglas Hotel, Galashiels, on March 16th, when Dr. JAMES WILFRED GEORGESON, chairman of the Division, presided. The guests of the Division were the Rev. Dr. McConnachie, Sheriff Chisholm, K.C., Professor Lovell Gulland, and Mr. Dowden. "The Sheriff CHISHOLM proposed the toast of the evening, "The British Medical Association," to which Professor GULLAND replied. During the evening a most [illegible] entertainment was given by the chairman, Dr. J. [illegible] GE (Stow), and the Rev. Mr. LANGLANDS, whi[illegible] contributed a recitation given in his own inimitable manner. Apparently for the first time in the history of the Division dinner the members contributed to their own entertainment, community singing having been arranged for and appropriate songs being provided on the back of the menu cards. The dinner was a very great success, and a special vote of thanks was accorded to the chairman, both for presiding on the occasion and for his musical efforts. The function terminated after 11 p.m. by the company singing "Auld lang syne."

SUSSEX BRANCH: BRIGHTON DIVISION.

A MEETING of the Brighton Division was held at the Queen's Road Dispensary on March 21st. Dr. WHITTINGTON was in the chair, and there were present twenty-six other members.

Dr. GEMMELL moved that the Division should approach the local members of Parliament and ask them to vote against the Dogs' Protection Bill. He said he should say nothing either for or against vivisection, either of dogs or other animals, but would content himself with asking the members to support his resolution. Dr. SUMMERHAYES, who seconded, said that there was too much sentimentalism and faddism in the profession and it was time a stand was made against it. Dr. L. A. PARRY asked the Division to take no action in this matter. He was strongly opposed to the use of dogs for experimental purposes. Was there a member in the room who would allow his own dog to be employed in this way? If not, what right had they to suggest that the dogs of other people should suffer? The Royal Commission on Vivisection had reported that the higher animals had a claim to special consideration, and the dog, being the highest of all, should be exempted. He protested against the refusal of the Association to publish a letter in the JOURNAL from him opposing the action of the Science Committee. He thought it a deplorable principle that a minority should be refused the opportunity of expressing its views in their own journal—(applause)—and he intended to take every possible step to alter this. If necessary he would raise the matter at the Representative Meeting at Edinburgh. Dr. FOTHERGILL supported the resolution. He thought these experiments were necessary, and that the Division should stand by its own Science Committee. Mr. FIELDEN strongly opposed the resolution. There were, he said, no experiments for which it was not quite possible to use some other animal than dogs, and he sincerely hoped that Dr. Parry's suggestion of taking no action in this matter would be carried. Mr. MCCURRICH also hoped the Division would not commit itself to any principle; the members did not know enough of the question to support Dr. Gemmell. He had a profound distrust of the methods of the Research Defence Society. Dr. WHITTINGTON, from the chair, though expressing no decided opinion, was on the whole in favour of no action being taken.

On the resolution of Dr. Gemmell being put it was carried by 16 votes to 7.

National Insurance.

LONDON PANEL COMMITTEE.

AT the meeting of the London Panel Committee on March 22nd, with Dr. H. J. CARDALE in the chair, Dr. J. Hollings was appointed a member of the committee to fill a vacancy in the representation of Bermondsey.

Delegation of Insurance Practice to Assistant.

Discussion arose on a case, which had been before the Medical Service Subcommittee, in which the principal in a practice had delegated the major portion of his insurance work to an assistant. Only 59 prescriptions were issued by himself during three months, while his assistant issued 3,291. The Medical Service Subcommittee had found that this practitioner had committed a breach of the terms of service, the Insurance Committee confirmed this, and the case was reported to the Ministry of Health. The Minister held, however, that the practitioner's failure to give personal service to his insured patients did not constitute a breach of the terms of service, and that the practitioner's obligation to give personal service did not prevent the assistant giving treatment instead of the principal, provided that continuity of treatment was secured, and that if a patient demanded he received the services of the principal. Dr. CARDALE said that they would all be agreed that every step should be taken to prevent the farming out of a practice, though the Minister's interpretation of the relevant clause of the terms of service—Clause 11 (1) and (8)—tacitly admitted that there was nothing in the regulations to prevent such farming out. There was some difference of opinion in the subcommittee of the Panel Committee with regard to pressing for an amendment of the clause, but it made the recommendation "That the Panel Committee do strongly deprecate any attempt at the farming out of insurance practices, but that the committee's representatives upon the Joint Consultative Committee be instructed not to take any definite steps in the matter without first reporting any contemplated action to the Panel Committee." His personal view was that the Minister's interpretation of the regulation was incorrect. He thought there could be no doubt that the regulation was intended to apply to patients individually, and not to permit a transference in bulk, whereas in the case under consideration the practitioner had handed over his patients in bulk to his assistant. Dr. CHASE moved an amendment strongly deprecating any attempt by the Insurance Committee to get the regulations altered until a definite complaint by an insured person on the subject had been received. Dr. PARTRIDGE said that he would prefer that the committee should neither take exception to the regulations as they stood nor, on the other hand, to the Minister's interpretation of them in this particular case. After some further discussion the amendment proposed by Dr. Chase was carried.

Medicine Containers.

The committee resolved to inform the Ministry of Health that owing to the use of medicine containers lacking graduation there was inaccuracy in dosage and waste of drugs, and to urge on the Ministry that regulations should be introduced as soon as possible to provide that all medicine containers supplied by pharmacists should be graduated.

Claims for Payment for Anaesthetist.

The committee decided in about a dozen cases to disallow the fee of one guinea claimed for the services of a second practitioner in administering a general anaesthetic, and to allow a fee of half a guinea only, in view of the nature of the operation. Letters were read from several of the practitioners concerned strongly protesting against this procedure on the ground that they, and not the committee, should be the judge as to what anaesthetic was necessary in a particular case.

Public Medical Service for London.

At a meeting of the Central Committee of Management of the Public Medical Service for London, which followed, it was reported that the number of subscribers was now 6,867.

Correspondence.

Fabian Medicine.

SIR,—My attention has just been drawn to a review under this heading in the JOURNAL of March 5th (SUPPLEMENT, p. 80) of a lecture given by myself on February 25th to the Fabian Society, really entitled "A medical service for all." The notice begins as follows: "It is sometimes useful to know to what length *animosity, ill-informed and unbridled, can carry the more narrow-minded of controversialists.*" (The italics are my own.) The critic then proceeds to give a very much condensed account of my remarks, which do not give any support to the opinion stated above. His objection was based presumably on the closing remarks by a non-medical member of the audience, but anyone reading the criticism to which I take exception would be left with the impression that the *lecturer* had engaged in a bitter attack on members of the medical profession.—I am, etc.,

London, W.4, March 19th. STELLA CHURCHILL.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Captain C. K. Bushe, O.B.E., to the *President* for three months' post-graduate course.

Surgeon Commanders W. J. Morris to the *Castor* on transfer; H. E. Seargill to the *Victory* for R.N. Barracks, Portsmouth, and for specialist duties; F. E. Anley to the *Dartmouth*, and as Fleet Medical Officer on transfer.

Surgeon Lieutenant Commander C. N. Ratcliffe to the *Dartmouth* on transfer.

Surgeon Lieutenants V. H. Boobbyer to the *Castor* on transfer; J. F. H. Gausson to the *Sutton* on transfer; C. R. Boland to the *Wildgeon*.

ROYAL ARMY MEDICAL CORPS.

Major J. H. Robinson to be temporary Captain, and relinquishes the rank of Major.

Captain E. M. Townsend, M.C., to be Major (prov.).

Captain J. W. Malcolm, O.B.E., M.C., is restored to the establishment.

H. A. Ferguson to be temporary Lieutenant.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader H. McW. Daniel to R.A.F. British Hospital, Irak.

Flight Lieutenant L. C. Palmer-Jones is granted a permanent commission.

Flying Officers S. F. Heatley to the Pathological Laboratory, Halton; A. L. St.A. McClosky to R.A.F. Depot, Uxbridge.

INDIAN MEDICAL SERVICE.

Major M. A. Nicholson is appointed substantively to be an Agency Surgeon under the Government of India in the Foreign and Political Department.

Captains F. Oppenheimer and S. D. Sondhi, M.C., to be Majors.

Lieutenants S. D. Gupta and D. MacD. Fraser to be Captains (prov.).

COLONIAL MEDICAL SERVICES.

Dr. J. W. Thomson promoted Senior Medical Officer, Nigeria. Dr. F. McKernan, Medical Officer, Nigeria, transferred to Gold Coast.

VACANCIES.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.9.—Honorary Radiologist. Honorarium 50 guineas per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Resident Surgical Officer. Salary £150 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—(1) House-Surgeon. (2) Casualty Officer and Resident Anaesthetist. Males, unmarried. Salary at the rate of £130 per annum each.

CANTERBURY: BOROUGH MENTAL HOSPITAL.—Assistant Medical Officer (male). Salary £300 per annum, rising to £400.

CHARING CROSS HOSPITAL INSTITUTE OF PATHOLOGY.—Assistant Pathologist. Salary at the rate of £500 per annum, rising to £600 after six months.

CHESTER ROYAL INFIRMARY.—House-Surgeon (male). Salary £150 per annum.

DERBYSHIRE ROYAL INFIRMARY, Derby.—(1) House-Physician. (2) Assistant House-Surgeon and Casualty Officer. Salaries at the rate of £150 per annum.

DOVER: ROYAL VICTORIA HOSPITAL.—House-Surgeon (unmarried). Salary £180 per annum.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum.

GRAVESEND AND NORTH KENT HOSPITAL.—Junior House-Surgeon. Salary at the rate of £50 per annum for six months, rising to £100 on appointment as Senior.

GRIMSBY AND DISTRICT HOSPITAL.—Secretary-Superintendent. Salary commencing about £300.

HALIFAX: ROYAL HALIFAX INFIRMARY.—Third House-Surgeon (male, unmarried). Salary £100 per annum.

HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—(1) House-Surgeon. (2) House-Physician. (3) Casualty Medical Officer. Salary at the rate of £100 per annum each.

HOSPITAL FOR EPILEPSY AND PARALYSIS, Maida Vale, W.9.—(1) Honorary Gynaecologist. (2) Resident Medical Officer. (3) House-Physician. Salary for (2) and (3) £150 and £100 per annum respectively.

LEEDS CITY.—Resident Medical Officer at the City of Leeds Sanatorium at Gateforth (unmarried). Salary £300 per annum.

LEICESTER ROYAL INFIRMARY.—Honorary Ear, Nose, and Throat Surgeon. Fifty guineas for out-of-pocket expenses.

LEWISHAM: St. JOHN'S HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum.

LONDON UNIVERSITY.—University Chair of Anatomy tenable at King's College. Salary £1,000 a year.

MANCHESTER: ANCOATS HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

MANCHESTER ROYAL INFIRMARY.—Resident Surgical Officer. Salary £200 per annum.

MANCHESTER VICTORIA MEMORIAL JEWISH HOSPITAL.—(1) Honorary Surgeon. (2) Senior House-Surgeon (male). Salary £250 for first year and £300 for second year.

MANOR HOUSE HOSPITAL, Golders Green, N.W.11.—House-Surgeon (male, unmarried). Salary at the rate of £200 per annum.

METROPOLITAN HOSPITAL, Kingsland Road, E.8.—(1) Senior House-Physician. (2) Senior House-Surgeon. (3) Junior House-Physician. (4) Junior House-Surgeon. (5) Two Casualty Officers. Males. Salary £100 per annum.

MOUNT VERNON HOSPITAL FOR DISEASES OF THE CHEST, Northwood.—Assistant Male Resident Medical Officer. Salary at the rate of £250 per annum.

NORTHUMBERLAND COUNTY COUNCIL AND URBAN DISTRICT COUNCIL OF NEWBURN.—Assistant County Medical Officer and Medical Officer of Health to the Newburn Urban District Council. Salary £700 per annum.

NORWICH: NORFOLK AND NORWICH HOSPITAL.—House-Surgeon. Salary £120 per annum.

PERTH: JAMES MURRAY'S ROYAL ASYLUM.—Assistant Physician (male, unmarried). Salary £300 per annum.

PORTSMOUTH BOROUGH.—First Assistant Resident Medical Officer for St. Mary's Infirmary, St. Mary's Institution and Children's Home (male, unmarried). Salary £350 per annum.

PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—Two Honorary Anaesthetists. Honorarium £40 per annum.

RICHMOND, SURREY: ROYAL HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £100 per annum, rising to £150 on appointment as Senior after six months.

ROYAL CHEST HOSPITAL, City Road, E.C.—(1) Resident Medical Officer. (2) House-Physician. Salary at the rate of £150 and £100 per annum respectively.

ROYAL EARLSWOOD INSTITUTION, Redhill.—Junior Assistant Medical Officer (male, unmarried). Salary at the rate of £250 per annum.

ST. ALBANS: HILL END MENTAL HOSPITAL.—Third Assistant Medical Officer (male, unmarried). Salary £450, rising to £500 per annum.

ST. JOHN'S HOSPITAL, Lewisham, S.E.13.—Resident Male Casualty Officer. Salary at the rate of £100 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary at the rate of £80 per annum.

STOCKTON AND THORNABY HOSPITAL, Stockton-on-Tees.—Honorary Ear, Nose, and Throat Surgeon.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION.—Medical Superintendent. Salary £1,000 per annum.

WALTHAMSTOW, WANSTEAD, AND LEYTON CHILDREN'S AND GENERAL HOSPITAL.—Senior and Junior Resident House-Surgeons (males). Salary £150 and £100 per annum respectively.

WEIR HOSPITAL, Grove Road, Balham, S.W.12.—Junior Resident Medical Officer (male, unmarried). Salary £100 per annum.

WEST END HOSPITAL FOR NERVOUS DISEASES.—Casualty Physician. Remuneration £200 per annum.

WINSLEY SANATORIUM, near Bath.—Assistant Resident Medical Officer (male). Salary £250 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Matlock (Derbyshire), Buckhaven (Fifeshire), Sedbergh (Yorks, West Riding). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.

Social Evening.—Mon., 8.30 p.m.

Section of Orthopaedics.—Tues., 4.30 p.m., Cases.

Sections of Odontology and Disease in Children.—Wed., 8 p.m., Special Joint Discussion: Oral Manifestations of General Disease in Children. Openers: Mr. A. T. Pitts and Dr. Robert Hutchison.

Sections of Tropical Diseases and Parasitology.—Wed., 8.15 p.m., Laboratory Meeting at the London School of Hygiene and Tropical Medicine, 23, Endsleigh Gardens, W.C.1. Professor W. Robinson: Crown Gall in Plants in reference to Comparisons with Cancer. Followed by a demonstration of laboratory exhibits illustrating crown gall, and recent developments in tropical diseases and parasitology.

General Meeting of Fellows.—Thurs., 5 p.m., Special Discussion on Bloodletting. Opening Speakers: Mr. W. G. Spencer, Dr. Herbert French, and Dr. Fortescue Fox.

Section of Laryngology.—Fri., 4 p.m., Cases.

Section of Electro-Therapeutics.—Fri., 8.30 p.m., Professor S. Russ and Miss G. M. Scott: (1) Growth of Tumours in Tissues exposed to X Rays and Radium; (2) Action of Radon "Seeds" upon Tumours and Some Normal Tissues of the Rat. Dr. J. C. Mottram: Correlation between Experimental and Clinical Radiation of Tumours.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.—Museum Demonstrations, 5 p.m. Mon., Mr. C. E. Shattock: Large Intestine. Fri., Sir Arthur Keith: Anatomy and Physiology of the Caecum and Appendix Vermiformis.

RÖNTGEN SOCIETY, 32, Welbeck Street, W.1.—Tues., 8.15 p.m., Dr. J. V. Sparks: Uses of Lipiodol as an Aid to Diagnosis in Diseases of the Chest; Mr. F. Melville: X-Ray Cinematography.

WEST KENT MEDICO-CHIRURGICAL SOCIETY, Miller General Hospital, Greenwich, S.E.10.—Fri., Dr. H. Charles Cameron: Common Neuroses of Childhood.

POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—*Queen's Hospital for Children*, Hackney Road, Bethnal Green, E.: All-day Course, the chief feature of which is the showing of cases. *Royal Eye Hospital*, Southwark, S.E.: Afternoon Demonstrations on the Diagnosis and Treatment of Diseases of the Eye. Information as to fees, etc., obtainable from the Fellowship of Medicine, 1, Wimpole Street, W.1.

CENTRAL LONDON THROAT, NOSE AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri., 4 p.m., Tuberculosis of the Larynx.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., Vomiting in Infancy.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 10 a.m., Surgical Clinic; 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical Skin and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations; 4.30 p.m., Demonstration on Selected Cases of Nerve Diseases.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Ophthalmic Institution: Wed., 4.15 p.m., Eye Cases.

MANCHESTER: ANCOATS HOSPITAL.—Thurs., 4.15 p.m., Tabes Dorsalis.

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Epidemic Encephalitis, Acute and Chronic. Fri., 4.15 p.m., Demonstration of Medical Cases.

MANCHESTER: ST. MARY'S HOSPITALS (Whitworth Street West Branch).—Fri., 4.30 p.m., Induction of Labour.

THE DOGS' PROTECTION BILL.

CONFERENCE ON ANIMAL EXPERIMENTATION.

RESOLUTIONS IN DEFENCE OF RESEARCH UNANIMOUSLY CARRIED.

A conference of representatives of medical and scientific bodies, in opposition to the Dogs' Protection Bill, was held at the House of the British Medical Association on Monday, April 4th. Mr. R. G. Hogarth, C.B.E., F.R.C.S., President of the British Medical Association, was in the chair, and those present included nearly one hundred representatives, from the universities, medical schools, medical and scientific societies, and other organizations such as those interested in dentistry, pharmacy, and veterinary science.

Chairman's Opening Remarks.

The President of the Association, after expressing his pleasure at welcoming so large, representative, and influential a gathering of the profession, said:

We are called upon to repel an organized attack on an important outpost of scientific research, and the best defence is often found in a vigorous offensive. The resolutions on the agenda are firm and uncompromising. For my own part I could have wished them stronger, but perhaps Lord Dawson and the other eminent speakers will supply in their commentaries whatever incisiveness some may find lacking in the text. As you are all doubtless aware, a monster petition is shortly to be presented to Parliament, signed, it is said, by over a million people, praying that the use of dogs for the purposes of scientific experiment may be forbidden by law. This agitation is not new, and, so far as I can learn, it has no new features. It is kept alive, after repeated rebuffs, by the flow of bequests made to the antivivisection societies and to the various bodies which exist for the special protection of dogs. It is an agitation which is not distinguished by scrupulous regard for accuracy of statement or fairness of description. Those who conduct its emotional propaganda by poster, pamphlet, and letters to the press are much addicted to over-colouring their case in order to excite emotion. I doubt whether 5 per cent. of the signatories are aware of the stringent conditions under which experimentation of all kinds upon living animals is carried on, of the jealous scrutiny with which licences are granted, and still less of what this class of experiment has done for the advance of medical knowledge and the practical conquest of disease. It is enough for them to see the lurid picture of a dog—which might be their own—dumbly pleading to be spared, and they assume that the knife must be cruel and the research worker a cold-blooded torturer.

I do not challenge the instinct which makes the ordinary man or woman shrink from the thought of experiment on the flesh of a living, though anaesthetized, animal, whether cold-blooded or warm-blooded, wild or domesticated, pest or pet. That instinct is both human and humane. But it is the business of science to look deeper than that. Man, by virtue of his superiority, arrogates to himself in a hundred ways the right to exercise the power of life and death over the lower orders of creation. So long as this power is exercised with humanity, and the purpose is worthy and adequate, the considered judgement of the civilized world approves the practice of painless experiment, and even, in strictly exceptional circumstances, tolerates the deliberate infliction of pain. Every aspect of this subject has been investigated again and again. The verdict does not vary, and informed opinion generally accepts the decision of the Royal Commission of 1912 that: "Experiments upon animals, adequately safeguarded by law, faithfully administered, are morally justifiable and should not be prohibited by legislation." That is the sufficient answer to the antivivisectionists. (Applause.) To those who qualify their formal acceptance of that general conclusion by demanding the special reservation of dogs, the answer is, in my opinion, no less conclusive—namely, that the overwhelming weight of expert scientific opinion lays stress on the special experimental value of the dog, because of the near analogy of its frame and digestive processes to those of human beings. Scientists—and our profession is scientific or it is nothing—can only judge by the balance of expert evidence. I surely need not avow in this matter my own strong affection for either dog or cat. I enjoy at home the favours of both. But when I consider at how low and cheap a rate human life is commonly valued, I am amazed at the fluent tears and hysterical emotion of those who support the Dogs' Protection Bill. If you think of the reckless and irresponsible prodigality of canine birth, of the facile mutability of their species, of the cynical indifference of dog for dog, and of the forlorn condition of the homeless stray, sentimentality over a dog's life may easily be indistinguishable from a soft and slushy emotionalism. Moreover, the dogs which

are the martyrs of this movement do not give their lives for man alone, they yield them no less for the benefit of their brother dogs. I hope that this meeting, representing as it worthily does science and medicine in all their branches, will impress upon Parliament the duty of yielding *nothing* to this illogical, this ill-balanced, and, I will also add, this mischievous and dangerous clamour. Let us say to the Government and to both Houses of Parliament as well as to the public at large: "*Trust your scientists* and trust them fully. It is not from science that you need apprehend cruelty, either to man or to dog, but from ignorance—from ignorance which is steeped in sentimentality and lacking in vision, proportion, and self-control." (Loud applause.)

THE POINT OF VIEW OF THE PHYSICIAN.

LORD DAWSON OF PENN, G.C.V.O., M.D., F.R.C.P.: This is one of the most curious meetings in respect to its composition that any of us has attended. Has there ever been an occasion with less disagreement between those who speak and those who hear? I see around me colleagues far better able than I to address you. To this audience we are preaching to the converted. But the public is also here, not in numbers, but in the representatives of the press, through whom what we say may reach many who at present do not see eye to eye with us.

Although the immediate purpose of this meeting is to counter a movement to exclude dogs from experimentation, the fact cannot be disguised that the whole principle of animal experimentation is involved. No small proportion of the people who are trying to exclude dogs from experimentation are avowed opponents of experimentation altogether. ("Hear, hear.") They regard this movement to prohibit the use of dogs as in the nature of a reconnaissance in force or a flank movement. For my part I am delighted. I think it is far better for the question to be faced outright rather than that our opponents should be allowed to attack in detail. If it is wrong to use dogs in the search after knowledge, it follows that it is wrong to use any higher animal at all.

It will be common ground that doctors belong to a humane race. It is part of their make-up, one of the greatest of their traditions. Is it likely that men who are trained to care for human suffering will be guilty of practices cruel and inconsiderate? I will assume, therefore, that all our opponents will admit that there is at any rate no cruelty of intention on the part of medical experimenters. Well, Sir, whatever your road of approach to this question, it always appears to me that you come up against the fundamental principle, Is it ethically justifiable to make use of animals for man's purposes? Are we justified in making use of animals for food or as beasts of burden? No one can pretend that the preparation of the Christmas turkey for the antivivisector's table is a pleasing process—for the turkey—or that horses like drawing heavy loads, or that cattle like being castrated in order that their flesh may be made more tender for man. However carefully done, castration produces far more distress than most of the experiments performed in research. These are questions on which we should welcome discussion. Surely the use of animals is justifiable provided the end in view is sufficiently beneficial to mankind and that no unnecessary discomfort is suffered by the animal. And is not the alleviation of pain and distress—of the suffering which may be witnessed day by day in our hospitals—sufficient reason for the employment of experimentation? (Applause.)

What is often forgotten in talking of animals and comparing them with man is that the animal at least suffers none of the anticipatory fears, none of the anxieties and griefs, which in human patients far outweigh the actual physical suffering. It does not realize what the suffering is going to be. If the public say that experimentation is not justifiable, well and good, the responsibility is upon them. I will venture to say that when once the public understand what the implications of such a position really are they will not be long in withdrawing their support from those who wish to suppress experimentation.

The benefits which have accrued from animal experiment might occupy us for a long time, but as a physician I take only a few examples. For years there have been the most patient investigations on the function of the pancreas; then came the crowning success of insulin by Banting at Toronto, with the result that diabetes has been brought under control, and literally thousands of lives have been saved. Within a short distance of this hall there lives a distinguished man who, as the result of the administration of insulin, is able to continue a career of unexampled value to the public; without insulin, there is not the slightest doubt, he would by this time be dead. Are our opponents prepared to take the responsibility of saying that the use of insulin is not justifiable? If so, we should like it stated in plain language. Yet it is on dogs that a large portion of this work has been done. I myself saw the dogs at Toronto which were the subject of experiment by Banting and his colleagues; they were well cared for, and those that were not ill were happy, some of them the pets of the laboratory.

What about diseases of the spleen, the causes of jaundice, the formation of gall stones? Fruitful work in all these directions has resulted from experiments on animals. Do they say that this is to stop? Yet in all these cases dogs were required for the investigations. All of this work would stop if the bill prohibiting the use of dogs became a legal enactment. Take typhoid, lockjaw, diphtheria. Is the work which has been done on these diseases to stop? It would if the higher animals were withdrawn from the use of the profession. Then again, new drugs—let me mention pituitrin, a drug which will control haemorrhage on the one hand, and go far to diminish the dangers of childbirth on the other. How are new drugs to be tested? On the wives and daughters of the members of the public—or on animals? Or are no new drugs to be tested and used at all? If there is to be no animal experimentation, the use of pituitrin falls to the ground. (For I will presume that a country which prohibits the use of animals for research is not going to be mean enough to take advantage of the results of experiment in other countries.)

It is for the public to decide, and if they decide that experiment on animals is right, then I have only this point to make, that the use of the rabbit in one case, of the guinea-pig in another, or of the monkey, or the cat, or the dog, is a question for experts. When a dog is used there is invariably good reason for its use. It may be, in some cases, a question of the size of the animal, or its physiological function or anatomical structure, or, again, it may be necessary to use a dog because it can subsist on a mixed diet. But I fall back on this ground that, granted the justifiability of animal experiment, the question of whether the dog should be used or not is one for experts. And is it to be supposed that the members of a humane profession would use a dog unless the necessities of knowledge required it? When it is a question of building a bridge across a river, the public rightly decides on the policy as to whether or not a bridge should be built, but, having so decided, leaves to the engineers the technical question as to what variety of steel shall be employed. We ask for the same confidence in endeavouring to bridge the gap from ignorance to knowledge. We ask confidently of public opinion that it should free us from these mischievous interferences, and enable our colleagues to pursue their scientific research for the benefit of mankind. (Loud applause.)

THE POINT OF VIEW OF THE SURGEON.

Sir HOLBURT WARING, F.R.C.S.: I associate myself with what Lord Dawson has said on the general question of the necessity of using animals for experimentation. I speak as a surgeon. What are the duties of a surgeon to his patients and to humanity at large? They are to provide the greatest possible amount of relief to humanity in the best possible manner. Surgery from many points of view is a handicraft—a scientific handicraft—and when it is desired in the interest of humanity to make progress or investigation it is necessary that this should be done on the animal. For ten years I was a licence-holder in connexion with vivisection and an active worker. The work I did was mainly in connexion with the surgery of the liver, gall bladder, bile ducts, spleen, and alimentary canal.

I say without hesitation that that early experiment has enabled me during a comparatively long and active surgical career in one of the largest hospitals in this country to avoid many unnecessary or imperfect operations on patients. These things have been avoided by the knowledge which I was able to gain from the experiments I actually made on the living animal. At the time when I began surgery the technique in the various branches I have just named was not as well understood as it is now. I agree with Lord Dawson also when he says that if public opinion is in accord with the desirability of experiment there is no justification for excluding the dog. By excluding the dog one takes away the principal means which the surgeon has of finding out what he wants to know. When I was carrying on these investigations I used, at different times, monkeys, dogs, cats, rats, sheep, and pigs, but I found that from the point of view of discovering the best solution of a surgical question which would be of importance when I came to treat the human patient a large-sized dog was far and away the best. It was the easiest to manipulate, with the dog we were better able to avoid all unnecessary pain, and from the experiment we got the knowledge we most desired. Would the promoters of the bill prefer that surgeons should make their experiments on patients in hospital or private practice? Personally, I should say it is far more humane to use for these experiments an animal so well suited to the purpose. The amount of suffering is very much less, and the result is very much better. And as a surgeon I ask, Have we as surgeons not ourselves certain rights as an expert body to make advances in our own particular art and science? ("Hear, hear.") Why should the surgeon who is in practice and at the same time is carrying on his experiments be looked upon by the community or any section of it as a criminal or potential criminal? Not only is he so regarded in some quarters, but if this bill passes into law the law may so regard him. With respect to the necessity that experiments on animals should be carried out under strict supervision, I may assure you from my own practical experience that the safeguards are very effective. During ten years I was making experiments of one kind or another, and on one occasion by some accident I used a cat instead of a rabbit. It was an entire accident, but I very soon had a strongly worded communication from the Home Secretary drawing my attention to what I had done, and pointing out that I had rendered myself liable to various penalties. That is the only lapse that I can remember, and I assure you the safeguards are very complete. On behalf of surgeons in general I endorse what Lord Dawson has said, and support the resolutions presently to be put to the meeting. (Applause.)

THE VIEW OF THE PSYCHIATRIST.

Professor GEORGE M. ROBERTSON, M.D., President of the Royal College of Physicians of Edinburgh, said: We are all lovers of dogs, and we can sympathize with those who on purely sentimental grounds bring forward this bill. But we love mankind more than we do dogs, and so we oppose it. Medical education has taught us the amount of suffering—of the mind even more than the body—that the human race has been spared by the sacrifice, small in comparison, of a few dogs. Were men and dogs placed on an equality, this sacrifice would be fully justified in our eyes; but men and dogs are not equal in the sight of any ordinary man or woman. To be sure, there are men and women who think differently. We have all met persons who, if asked the question, "Is man not of more value than many dogs?" would promptly reply in the negative, regardless of the biblical analogy. A lady of my acquaintance kept the day of her dog's death sacred and made an annual pilgrimage to its grave, which involved a railway journey. She was prepared to ignore any amount of human suffering rather than allow one dog to suffer pain. Another talented woman was asked the question, if her only child were sick and dying and an operation on a dog might save its life, would she permit it to be performed. Her answer was a decided negative. Is legislation on a subject so important, affecting the welfare of the whole human race, to conform to the ideals of such people, however worthy they may be? ("Hear, hear.")

Human nature being what it is, it is not surprising that this bill should be brought forward. Moreover, it is fostered by ignorance of the facts. To us, who know the facts, it is inconceivable that any rational being with this knowledge could support the bill. It is also based on a failure of the imagination. It is not difficult for any sympathetic person to feel for the dog that is suffering pain. It is much more difficult for him to form in his mind a picture of human suffering in the abstract and in the mass, for the object by its very vastness becomes vague, and the image loses vividness, so that it does not make the same direct appeal as the suffering of one dog.

Speaking as one who is particularly interested in the brain and nervous system, I would refer to the classical experiments of Fritsch and Hitzig, and of our dear friend Sir David Ferrier, who is amongst us to-day. (Applause.) The whole aspect of cerebral physiology and pathology was revolutionized by the discovery that certain movements could be excited by the direct application of electricity to certain regions of the cortex in dogs. Ferrier's own experiments were made with the object of obtaining proof of the views of Hughlings Jackson as to the causation of unilateral convulsions.

It is important to note, as showing the necessity for comparative experiments, that four centres discovered in dogs could not be found in cats. At a later date dogs were superseded by monkeys in these cerebral experiments as being nearer to man in the scale of creation. The sympathy of the supporters of this bill, whether as a result of policy or otherwise, does not extend to these near relations of ours. I would refer also to Pavlov's experiments on dogs, whereby he established the fact of the psychic control of gastric secretion, and of his valuable observations on conditioned reflexes.

While smaller animals are suitable for many types of experiment, an animal of sufficient size, which resembles the human subject in its anatomy and in its habits of feeding, is essential for experiment on the central nervous system, and on the stomach, intestines, and pancreas. By long experience the dog has been found to be the only animal which fulfils these requirements, and progress at the present time is already greatly hampered by the difficulty of obtaining dogs for laboratory work in these departments of medicine.

In conclusion, I should like to read you a quotation from O. Henry, who possessed an uncanny insight into human nature. It occurs in the volume entitled *Whirligigs*, and in the story of "The theory and the hound." There the principal character is made to say: "I am a Kentuckian, and I have seen a great deal of both men and animals, and I never yet saw a man who was overfond of horses and dogs who was not cruel to women." That furnishes a problem for the psycho-pathologist, and, indeed, light might be thrown on the whole attitude of the out-and-out supporters of the bill by an inquiry of this nature. (Laughter.) The medical man is often referred to as the "beloved physician," and the public entrust their own lives into the keeping of members of our profession. Is it too much to ask them to trust us also not to cause unnecessary pain to any of God's creatures, particularly dogs? (Applause.)

THE VIEW OF THE INVESTIGATOR.

Sir THOMAS LEWIS, M.D., F.R.S., began by showing that the science and practice of medicine had been built, and continued to be built, upon a threefold basis: the examination of living people, the dissection of their bodies after death, and experiment upon living animals. If any of those three sources of information had been closed in the past, medicine would have failed to emerge from the status it held in the Dark Ages.

"It is a usual plan, in explaining the value of experiments upon living animals, to recite instances in which such experiments have directly led to the prevention, cure, or alleviation of disease in man. This plan makes perhaps the strongest, since it is the most direct, appeal to the masses of the people; and those who adopt it have no difficulty in pointing to an array of brilliant discoveries illustrating the extraordinary value of the method. It is not, however, upon such examples that the case for

experiments on living animals mainly depends. It is more deeply founded. A full appreciation of the value of this method is obtained in one way only—namely, by considering where medical knowledge would now stand had this method been forbidden us.

"I start with Harvey, the pioneer of this method. Harvey's great work, conducted in large part upon dogs, and the further discoveries by means of similar experiments which his work has since prompted, have laid the whole foundation of physiological knowledge. Let any medical man sit down and attempt to write a reasoned statement as to the manner in which the circulation of the blood happens in the body and is controlled, and let him in so doing refrain from writing down any fact or inference derived, directly or indirectly, from experiments on living animals, and he will realize how primitive and inadequate his statement will be. Let him set himself a similar question in respect of the nervous system, the functions of its many parts, or of the glandular organs of the body. When he has made these attempts, and only then, will he begin fully to understand the fundamental part experiments on living animals have played and what they mean to him and to his daily work." (Applause.)

Sir Thomas Lewis mentioned as an illustration the cardio-vascular system, pointing out that to the man who denied himself knowledge from this source the stethoscope would be of small value, for the manner in which the valves of the heart gave out their sounds was determined by animal experimentation, which cleared up the errors of Laennec—errors consequent upon relying purely upon clinical observation. The determination of variations of the pulse, the measurement of blood pressure, the interpretation of the movements of the heart by the electrocardiograph—all these things had developed from experiments on animals, and the bulk of the information had been derived from experiment upon unconscious dogs, in which the circulation more closely resembled that of man than that of any other domesticated animal.

"There is no practitioner in this land who does not use information of this kind, and information similarly derived from other organs and systems, constantly in his daily work. When he sets out to understand the meaning of such common symptoms as palpitation, breathlessness, giddiness, fainting, and innumerable other forms of distress, when he transfuses his patient with blood, or employs rectal feeding, he is making wholesale use of knowledge won by animal experimentation."

The speaker mentioned the capital that had been made out of the large number of dogs used at University College, London. But this was the chief centre in the country for studying problems relating to the circulation, and for those problems the dog was by far the most suitable animal. Dogs were never used unless their use was essential. The fiction had been spread abroad that experiments on living animals were conducted secretly, "behind closed doors." That experiments were not conducted publicly, and so illegally, seemed to be a grievance. But to suggest that there was secrecy was to betray an astonishing ignorance of prevailing conditions. Experiments could be performed in licensed buildings only, and these were institutes in which many people were at work. Few experiments were carried out except in the presence of other people, none were done out of earshot, the presence of assistants was the rule, and other workers and helpers were constantly going in and out. No dog could be in serious pain without the fact becoming known, and this was a more powerful preventive of abuse than would be a tenfold increase of inspectors' visits. No experimenter could contemplate cruelty, for he would run the certain risk of losing the respect and esteem of his associates. (Applause.)

Of the petition of the National Canine Defence League, the speaker said that it spoke falsely of the dog having been specially selected for demonstrations of a prolonged and agonizing nature before classes of students. "No operations upon living animals are performed, either as demonstrations or otherwise, except upon anaesthetized and unconscious animals. No one who has signed this document in good faith can escape the judgement that he has done so under an entire misapprehension of the present-day conditions of animal experiment. In its own brief phrasing the document proclaims itself valueless, and proves its signatories to be unfitted to influence the decisions of Parliament." (Applause.)

Antivivisectors (said Sir Thomas Lewis in conclusion) formed a curious body of people. Their leaders were unscrupulous or culpably negligent in their method of presenting a case; in their propaganda they issued statements which the simplest inquiries would prove grossly inaccurate; they deliberately or otherwise perverted the meaning of plain words; they concealed or denied the central fact that operational experiments were only performed under deep anaesthesia and with the strictest precautions for the avoidance of suffering. They derived their descriptions from experiments conducted in other lands and from the doings of physiologists who lived in the days when man as well as beast perforce lay unanaesthetized under the surgeon's knife. The campaign satisfied in some a morbid craving for the horrible; it brought to others—the misanthropic—their only stimulus to self-esteem, namely, a belief in the depravity of their fellow-beings; but to many unselfish and right-minded people it brought much needless mental suffering. To these last, and these alone, the medical profession could tell the actual facts with any prospect of credence; on these the fact must be impressed that statements representing cruelty were false, but that their refutation was not always possible or to be expected, for they were published in periodicals controlled by those who were deeply prejudiced, or in obscure newspapers to which those calumniated had little access, and were written by people who had time and leisure to pour forth a flood of abuse concerning men and women to whom leisure was almost unknown. But the campaign was really an attack upon the progress of medicine and surgery and against the cure and alleviation of human suffering. (Loud applause.)

The View of the Veterinarian.

Lieut.-Colonel J. W. Brittlebank (President of the Royal College of Veterinary Surgeons) associated himself, from the veterinarian standpoint, with what had been said by other speakers. It was regrettable that there should be any necessity in 1927 to reply to the many unprincipled accusations made against great scientists who had to resort to experiments on animals. The chairman had rightly said that as a result of emotional propaganda a good deal of money was left by people to societies whose objects were supposed to be the mitigation of animal suffering. In his profession they had considerable acquaintance with those bodies, whose emotional propaganda was extraordinarily effective. If it were only emotional and not unprincipled the objection would not be so great, but in fact there were no lengths to which these propagandists would not go in the statements they made. Men who had devoted the best years of their lives to carrying on research work of immense benefit to humanity, and to the animal kingdom also, were pilloried as blackguards, and this a hundred years after the birth of Lister! The whole training of the member of the veterinary as of the medical profession was in the direction of the relief of pain. There was not a man in his own profession who, having seen animals in gross pain, would not do his utmost to relieve it. At the same time there was a vast difference in what might be called the mental attitude of animals and of human beings. He had seen animals undergo the severest operations—often, years ago, in circumstances in which anaesthesia was impossible—and at the completion of the operation the animal would get up and begin to feed. There was no agony of anticipation in the animal, and there was a great capacity to forget. Some very valuable work for animals themselves had been done as a result of animal experiment—he instanced distemper, a work for which dog-lovers should be grateful. Was that sort of work to be stopped? Science must not be interfered with by this clamour; it must be free to carry on its work in its own quiet, dignified, and unadvertised way. He quoted, in conclusion, a letter received by the Royal College of Veterinary Surgeons from Lord Lister many years ago in reply to congratulations on the conferment of his peerage. The College had told him that veterinary medicine and surgery had benefited

amensely from his work, and Lord Lister's reply was that e equally had benefited from veterinary science and from ie opportunity of working among animals. (Applause.)

The View of the General Practitioner.

Dr. H. B. Brackenbury, Chairman of the Representative ody of the British Medical Association, said: It is my rivilege and responsibility to present a few observations o this audience, and through them perhaps to a larger udience, as representing in some sort the general practiioner. We general practitioners constitute the great bulk f the profession, and when anyone in a book or a speech r a petition accuses, directly or by implication, the proession of cruelty, or of something very much like it, it ollows that the body of general practitioners are themelves accused. The curious thing is that if you take the ndividual patient or potential patient you will not find him aking an accusation of that sort against any section of he profession, certainly not against general practitioners ho form the bulk of the profession, but the same ndividual seems to have no hesitation whatever in putting is name as one of the million to statements which involve hat accusation. That is a curious psychological feature, nd in itself, even apart from the absurdly untrue statenents in the petition, would lead anyone who brought an ndependent mind to bear upon the matter—the mind which re may assume all members of Parliament to possess—to lismiss the statements above such signatures as being ithout value. ("Hear, hear.")

On behalf of the general practitioners in the profession I would say that we feel, as everybody in the profession must feel, that an accusation of cruelty or callousness, or even lack of sympathy, is one which, if calmly examined, would be at once refuted, and we must discount here, as we do elsewhere—in public meetings for example—that mass psychology which shows such curious perversities.

General practitioners are often described as the rank and file of the profession. It is an unhappy phrase, to my mind, because it involves what I believe to be a false metaphor. We general practitioners are not conscious that in our fight for health we are under the orders of a superior body of persons whose words it would be almost a mutiny to gainsay. (Laughter and applause.) We believe that our part in professional work is at least as important as any other part—some of us think even more important—and that we can bring as much skill and careful scientific thought into that work as any other branch of the profession. ("Hear, hear.") Therefore as *scientists*—as men and women who have been brought up in the traditions of scientific training and teaching—we associate ourselves with those more specialized branches of the profession whose members no doubt know a great deal more at first hand than we do about experiments upon animals.

But it is not on that ground that mainly we should base our desire to create a public opinion unfavourable to such movements as are indicated by the Dogs Bill. It is, of course, more directly the practical usefulness of the results of these experiments in our daily work that we wish to bring home. Here I might mention—not to discuss or to prove again—three ways in which general practitioners every day of their lives must be seeing the beneficial results of work which has in fact been done upon dogs. One may take three types of work, though they are not really separate. One is the testing of drugs so that we can apply them in our daily work with precision and with the best results. I believe that the testing of the chief drugs for controlling cardiac troubles has been carried out largely on dogs. As we go on in practice from year to year we see an increasing number of people who, but for the work done in this connexion, would have died years ago after a distressful life, but who to-day are able to enjoy reasonable comfort and activity.

Among the commonest troubles for which our patients come to us are those connected with the digestive system. Here again the investigation of function, of the stomach particularly, has been, and must necessarily have been, upon the dog, because there is no other animal whose diet so closely approaches that of the human being. Once more, the discovery of insulin has already been referred to, and here we have the actual discovery of a new medicament. One could mention a great many other things, all of them of everyday use to the practitioner. I fail to see how it is possible for anyone to support such a bill as the Dogs Bill unless he is prepared at the same time to say that he will refuse the chief aids which his medical practitioner can give him when he is suffering from a distressed and struggling heart, or the consequences and discomforts of an ill directed diet, or the grave disease of an imperfectly controlled diabetes. ("Hear, hear.") I do not think that anyone would sign a petition such as this if he understood that it involved, as logically it does, the suffering of those ills without the resort to methods of relief which have been worked out as the result of experiments which he deprecates and desires to forbid. (Applause.)

We have heard a good deal about the research which might be done by general practitioners. This has not yet been properly directed, systematized, or controlled. But there is a good deal of individual research going forward by general practitioners, and there is obviously a great movement for combined research by them all over the country. But this must necessarily be the kind of research which follows upon laboratory experiment. We cannot begin research of that kind on the human being. It is laboratory work—experiments on animals, particularly on dogs—which brings about the safe and efficient application of new substances or methods to human beings. Only in that way can we reap the advantage of combined research by general practitioners.

May I, in conclusion, say one or two words to general practitioners themselves? What we are trying to do here is to create an informed and intelligent public opinion. There are certain people whom we cannot hope to influence in any circumstances whatever, but if we as a profession and as a body of scientific men and women are going to get such an intelligent public opinion as will prevent the annual recurrence of these absurd proposals no one can help more to create that opinion than the general practitioner. It is difficult and requires a certain amount of courage for general practitioners to tackle their own patients on this subject when many of those patients are exceedingly sensitive and may be profoundly offended if their medical man expresses an opinion in a different direction from that in which their own sympathies lie. But I am certain that there are among our patients a very large number of persons who are sincerely desirous of information upon this subject, who would welcome it, and accept it as truthful; and I want to appeal to general practitioners to throw themselves into this campaign to create a proper public opinion. Never mind if we come up against the impossible person, the ultra-sentimentalist, to whom plain logic is of no value whatever, or the perverted idealist, who has no regard for practical common sense. When you come against such people, wisdom sometimes consists in saying no more in those circumstances. But there is a propaganda we can carry on among our patients who, though ill informed, are anxious for information, and if opportunities are not made for us it is possible for us to make opportunities. If we do not do so, I am afraid we may at last come up against that state of affairs in which sheer terror born of disastrous experience achieves what intelligence and a sense of public duty and the advice of doctors and scientists had not succeeded in effecting. I have great pleasure in supporting the resolutions. (Loud applause.)

Questions and Suggestions.

After these various addresses were concluded the meeting was thrown open for questions or brief discussion.

Lord Lamington promised the utmost help of the Research Defence Society in prosecuting the campaign against the bill.

Mr. E. Moss-Blundell (*Field* Distemper Fund) associated his council whole-heartedly with the objects of the Conference. The work upon which the supporters of the Fund were engaged was designed to relieve much animal suffering, and it would be a great disappointment from that point of view, apart from any other, if it were stopped, as it would be, by the passing into law of the Dogs' Protection Bill.

Dr. F. E. Fremantle, M.P., referred to the difficulty of confuting by argument the positions of those who were

blinded by their love of dogs, though such argument, of course, must continue. But he thought that it would be very useful to have a clear statement of the advantages to dogs themselves which had followed from this experimental work. In the literature of the subject not enough was made of the value of experiment in the relief of animal suffering.

Mr. F. T. G. HOBDAY, C.M.G., F.R.C.V.S., mentioned that as a student he had always been taught that the dog could not with safety be chloroformed for operations, and in his young days he scarcely ever saw a dog chloroformed which did not die under the anaesthetic. The operations had accordingly to be done on the conscious creature, to its great agony. He himself refused to believe that chloroform could not effectively be given to dogs, and noticing that when chloroform was given it was usually in a rough-and-ready way, he set himself to work out a proper appliance and method. But in order to do this he had to hold four vivisection licences, one of which was considered by the antivivisectionist to be the most brutal of all. The result was that dogs could now be chloroformed with speed, efficiency, and safety. A somewhat similar piece of work was also done in connexion with the administration of local anaesthetics, under which formerly dog after dog was lost. But again animal experiment was necessary for bringing this great boon to the animals themselves.

Dr. ALFRED COX (Medical Secretary, British Medical Association) read the following telegram from Mr. J. J. Withers, M.P. for Cambridge University:

"I am sorry I cannot possibly come to meeting this afternoon. Please, however, assure your body that I shall support the provision of all proper facilities approved by the recognized medical authorities under the existing proper safeguards."

A resolution by the Council of the Royal Society of Tropical Medicine and Hygiene was also circulated, conveying unanimous approval of the objects of the Conference and expressing the opinion that medical research would be greatly facilitated if the Government would allow a proportion of the stray dogs which are killed every year to be used for purposes of research, under the strict regulations of the Act. Another memorandum circulated conveyed the views of the Faculty of Medicine, Edinburgh University, that the advances in surgery during the last fifty years had been almost without exception made possible by carefully conducted experiments on animals, and that the dog had been found to be the only animal which fulfilled the requirements of experimental work in relation to surgery. The Faculty further expressed the view that progress in this branch of medical science was at present greatly hampered by the difficulty which existed of obtaining dogs for laboratory work, and that any further restriction in the supply of dogs would not only impede but virtually preclude a large amount of valuable research. It was added that the statement as to the restriction of the work through the inadequacy of the supply of animals applied to physiology as well as to surgery.

THE RESOLUTIONS.

The CHAIRMAN then put to the Conference separately the following three resolutions, and declared each of them to be carried unanimously:

1. That this Conference, believing that any withdrawal or curtailment of the powers at present granted under licence and inspection will hinder medical research to the detriment of the health and well-being of the community, wishes to enter a strong protest against any bill which has for its object further restrictions upon experimental work on dogs or other animals.

2. That this Conference is of opinion that the existing law should be altered so as to permit, under proper provision for the prevention of pain and for efficient inspection and control, the use, for purposes of research, of some of the numerous stray and unowned dogs now taken up by the police and condemned to the lethal chamber, thus ensuring conditions which are essential to progress and physiological knowledge and to the application of this knowledge to the practice of medicine.

3. That copies of the above resolutions be sent to the Prime Minister and to the Home Secretary, together with a note of the names of those present at the Conference and of the bodies they severally represent.

On the motion of Mr. HERBERT L. EASON (General Medical Council) a hearty vote of thanks was accorded to Mr. Hogarth for presiding, and the Conference then terminated.

The universities, colleges, and other scientific societies represented at the Conference were as follows:

British Association for the Advancement of Science: Sir Edwar Sharpey-Schafer, F.R.S.
British Dental Association: Mr. C. F. Rilot.
British Empire Cancer Campaign: Dr. N. Howard Mummery.
British Medical Association: Mr. R. G. Hogarth, C.B.E. (President) Dr. H. B. Brackenbury, Dr. C. O. Hawthorne, Dr. Alfred Co O.B.E., Dr. G. C. Anderson.
"Field" Distemper Fund: Mr. E. W. Moss-Blundell.
General Medical Council: Dr. H. B. Brackenbury, Mr. Herbert L Eason, C.B., C.M.G., Sir Humphry Rolleston, Bt., K.C.B. Professor Arthur Thomson, Sir Holburt Waring, C.B.E.
Glasgow Veterinary College: Mr. A. W. Whitehouse (Principal).
Imperial Cancer Research Fund: Sir Frederick Andrewes, F.R.S.
Foot-and-Mouth Disease Research Committee: Professor W. Bulloch F.R.S.
Lister Institute of Preventive Medicine: Professor C. J. Martin C.M.G., F.R.S. (Director).
Medical Research Council: Sir Walter Fletcher, K.B.E., F.R.S.
Medical Society of London: Dr. E. M. Callender, C.B.E.
Medical Women's Federation: Lady Briscoe, M.B.
National Institute of Medical Research: Dr. S. R. Douglas.
Pathological Society of Great Britain: Professor A. E. Boycott F.R.S.
Pharmaceutical Society of Great Britain: Dr. J. H. Burn.
Physiological Society: Dr. H. H. Dale, C.B.E., F.R.S., Professo C. Lovatt Evans, F.R.S.
Research Defence Society: Lord Lamington, G.C.M.G., G.C.I.E (President), Sir Thomas Lewis, C.B.E., F.R.S., Sir David Ferrier, F.R.S., Lady Horsley, Dr. F. W. Goodbody, Dr. G. P Crowden.
Royal College of Physicians of London: Sir Wilmot Herringham K.C.M.G., C.B.
Royal College of Physicians of Edinburgh: Professor George M Robertson (President).
Royal College of Surgeons of England: Sir Cuthbert Wallace, K.C.M.G., C.B. (Vice-President).
Royal College of Surgeons of Edinburgh: Mr. A. Logan Turner, LL.D. (President), Mr. George Mackay.
Royal College of Veterinary Surgeons: Lieut.-Colonel J. W. Brittlebank, C.M.G. (President).
Royal (Dick) Veterinary College of Edinburgh: Dr. Henry Dryerre.
Royal Society of Edinburgh: Sir E. Sharpey-Schafer, F.R.S.
Royal Society of Tropical Medicine and Hygiene: Dr. Leslie Sheather, Dr. H. S. Stannus, Dr. C. M. Wenyon, C.M.G., C.B.E.
Royal Society of Medicine: Lord Dawson of Penn, G.C.V.O., K.C.B., K.C.M.G., Dr. S. Monckton Copeman, F.R.S., Mr. F. T. G. Hobday, C.M.G., Professor J. McIntosh.
School of Medicine of the Royal Colleges, Edinburgh: Dr. John Orr.
Society of Apothecaries of London: Dr. Alfred Hepburn (Master), Lieut.-Colonel C. T. Samman, R.A.M.C.(ret.).
Veterinary College of Ireland: Professor D. Kehoe.
Wellcome Bureau of Scientific Research: Major H. C. Brown, C.I.E., I.M.S.(ret.).
Wellcome Physiological Research Laboratories: Dr. R. A. O'Brien, C.B.E.
Welsh National School of Medicine: Professor T. Graham Brown, Professor A. W. Sheen, C.B.E.

MEDICAL FACULTIES OF THE UNIVERSITIES.

St. Andrews: Professor P. T. Herring.
Birmingham: Professor E. W. W. Carlier, Professor G. Haswell Wilson.
Bristol: Professor E. Fawcett.
Cambridge: Sir Humphry Rolleston, Bt., K.C.B., Dr. W. E. Dixon, F.R.S.
Edinburgh: Professor G. M. Robertson, Sir E. Sharpey-Schafer, F.R.S., Professor D. P. D. Wilkie, O.B.E.
Glasgow: Professor Archibald Young.
Leeds: Professor J. Kay Jamieson.
Liverpool: Professor W. J. Dilling, Professor J. S. Macdonald, F.R.S.
Sheffield: Professor E. Mellanby, F.R.S.
LONDON—
Guy's Hospital Medical School: Professor M. S. Pembrey, F.R.S.
London Hospital Medical College: Professor H. E. Roaf, Mr. H. S. Souttar, C.B.E.
London School of Hygiene and Tropical Medicine: Mr. J. T. Duncan, Dr. Andrew Robertson.
Middlesex Hospital Medical School: Professor J. McIntosh.
St. Bartholomew's Hospital and College: Professor F. R. Fraser.
St. Mary's Hospital Medical School: Sir William Willcox, K.C.I.E., C.B., C.M.G.
St. Thomas's Hospital Medical School: Sir Cuthbert Wallace, K.C.M.G.
University College Hospital Medical School: Professor A. E. Boycott, F.R.S., Professor T. R. Elliott, C.B.E., D.S.O., F.R.S., Sir Thomas Lewis, C.B.E., F.R.S.
Westminster Hospital Medical School: Sir James Purves-Stewart, K.C.M.G., C.B., Mr. Arthur Evans, Mr. Stanford Cade.
Bedford College: Professor J. S. Edkins.

Among others present were Sir Archibald Garrod, K.C.M.G., F.R.S., Regius Professor of Medicine in the University of Oxford, and the following medical members of Parliament: Sir Richard Luce, Sir George Berry, Dr. F. E. Fremantle, Mr. T. Sinclair, C.B.

British Medical Association.

CURRENT NOTES.

Optical Practitioners' Registration Bill.

The personnel of the Departmental Committee appointed by the Minister of Health "to consider a draft bill prepared by the Joint Committee of Qualified Opticians to provide for the registration of optical practitioners and to regulate the practice of sight-testing" is as follows: Mr. F. B. Merriman, K.C., M.P. (chairman), Mr. O. Ares, Mr. W. B. Barker, Dr. H. B. Brackenbury, Mr. L. G. Brock, C.B., Mr. E. Treacher Collins, F.R.C.S., Mrs. W. L. Courtney, Lord Cozens-Hardy, Mr. R. J. Davies, M.P., Mr. H. L. F. Fraser, M.A., LL.B., Dr. C. O. Hawthorne, Mr. G. E. Houghton, and Sir Henry Keith. Mr. J. S. Henderson of the Ministry of Health is secretary. The representative of the British Medical Association on this committee is Dr. Brackenbury. The special subcommittee appointed by the Ophthalmic Committee to consider the evidence to be given by the Association before this committee held its first meeting on March 31st, when it made a preliminary examination of the text of the bill introduced in the House of Commons on February 11th last, determined the plan of the evidence to be given, and arranged for the collection of information by means of a questionary addressed to selected ophthalmic surgeons. The bill would provide that registration as an optical practitioner should be open to any person at, or over, the age of 21 who held a recognized certificate or other evidence of qualification approved by a Central Optical Board; or had been engaged in optometry in Great Britain for the five years previous to the passing of the bill, and had been successful in an examination in optometry; or, having completed the prescribed training, had satisfied the board's examiners as to his competency in optometry. Such a registered optical practitioner would be entitled to give certificates relating to visual acuity or visual defects; such certificates would be recognized as admissible by any local or central authority or Government department in any part of Great Britain. Reciprocal arrangements for the recognition of such practitioners could be made with other countries. The Central Optical Board would appoint a registrar to keep a register of optical practitioners to whom certificates would be issued annually. The board would draw up regulations for the removal or restoration of the names included in this register; for prescribing training for qualification; for holding examinations; and for regulating advertising. It would consist of twelve members, and include representatives of the General Medical Council, the Ministry of Health, the Scottish Board of Health, and the Board of Education; the remaining eight members would be optical practitioners appointed by the Minister of Health after consultation with associations or organized bodies of such practitioners. The board would hold office for two years, and subsequently would include eight optical practitioners elected by those whose names appear on the register.

Laboratory Services for Insured Persons.

The Pathological Subcommittee appointed by the Insurance Acts Committee met on March 29th to discuss with representatives of the British Pathologists' Association the arrangements now being made in the areas of some Insurance Committees for the provision of a laboratory service for insured persons. These efforts to meet the growing need for such services are a source of much anxiety to the Insurance Acts Committee, since a false step at the outset may seriously hamper the future development of an important public service. The subcommittee is formulating suggestions for the consideration of the Insurance Acts Committee.

Association Notices.

TABLE OF DATES.

April 23, Sat.	Annual Report of Council appears in SUPPLEMENT. Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members, for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 7, Sat.	Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.
May 10, Tues.	Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
May 14, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Publication in SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Last date for election of Representatives and Deputy Representatives.
May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	[illegible] *ting*, Edinburgh, 10 a.m. [illegible] of 12 members of Council by must be received (at A.R.M., [illegible], 2 p.m.
July 16, Sat.	[illegible]
July 18, Mon.	[illegible]
July 19, Tues.	[illegible] Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH: ABERDEEN DIVISION.—At the meeting of the Aberdeen Division to be held on Thursday, April 21st, a British Medical Association Lecture will be given by Professor John Fraser, *M.C.*, F.R.C.S., on "The treatment of burns in children."

KENT BRANCH: ISLE OF THANET DIVISION.—The annual meeting of the Isle of Thanet Division will be held at the Royal Albion Hotel, Broadstairs, to-day (Friday, April 8th), at 8.30 p.m., when Dr. H. Raven will take the chair. A paper on "Clinical notes from practice" will be read by Dr. W. J. Tyson, F.R.C.P. Agenda: Election of officers for the ensuing year; observations by Dr. A. M. Watts on the new regulations governing notification of puerperal pyrexia.

LANCASHIRE AND CHESHIRE BRANCH: BLACKBURN DIVISION.—A meeting of the Blackburn Division will be held on Tuesday, April 12th. Professor A. J. Hall, F.R.C.P., will give a British Medical Association Lecture on "The reflexes which determine and control posture," with cinematograph illustrations.

LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.—The annual meeting of the Rochdale Division will be held in the Education Offices, Lyceum, Ballie Street, Rochdale, on Wednesday, April 27th, at 8.30 p.m. Business: Annual report for 1926; election of representative, deputy representative, officers, and Executive Committee for the ensuing year.

LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.—Professor Ralph Stockman (Glasgow) will give a British Medical Association Lecture on fibrositis at a meeting of the Southport Division to be held at 52, Hoghton Street, Southport, to-day (Friday, April 8th), at 8 p.m. It is hoped that local practitioners will take the opportunity of hearing the lecture.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next clinical meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., to-day (Friday, April 8th), at 4.15 p.m., when Mr. Heath will show cases. Tea at 4 p.m.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House on Tuesday, April 12th, at 9 p.m., when Dr. Geoffrey Evans will discuss the treatment of high blood pressure.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Royal Hospital, Chesterfield, on Wednesday, April 13th, at 3 p.m., for clinical and pathological demonstrations.

NORTH WALES BRANCH.—The spring meeting of the North Wales Branch will be held on Tuesday, April 19th, at Pwllheli. Members wishing to read papers or show cases should communicate with Dr. E. Lewys-Lloyd, Branch secretary (Rhianfa, Towyn, Merioneth).

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.—A meeting of the Blyth Division will be held in the Knight Memorial Hospital, Blyth, on April 20th, at 8.15 p.m., when Mr. Arkle (Newcastle-on-Tyne) will lecture on "Eye conditions of interest to colliery practitioners." Members of the Morpeth Division are invited.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, April 20th, at 8.15 p.m. Dr. E. Farquhar Murray will give an address on "Some modern aspects of midwifery and gynaecology." All members of the Division are invited to be present.

SURREY BRANCH: GUILDFORD DIVISION.—At a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, to be held on May 19th, Professor Hobday will open a discussion on clean milk. Further particulars will be announced later.

SURREY BRANCH: REIGATE DIVISION.—A clinical meeting of the Reigate Division will be held at the Caterham Cottage Hospital on Wednesday, April 13th, at 4 p.m.

SUSSEX BRANCH: BRIGHTON DIVISION.—A clinical meeting of the Brighton Division will be held at the Lady Chichester Hospital on Thursday, April 21st, at 3.45 p.m.

WILTSHIRE BRANCH: TROWBRIDGE DIVISION.—The annual general meeting of the Trowbridge Division will be held at Trowbridge Town Hall on Wednesday, April 13th, at 3 p.m. Agenda: Election of officers; annual report; puerperal fever regulations; medical charities. Tea will be served after the meeting.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The spring clinical meeting of the Worcestershire and Herefordshire Branch will be held at Hereford on Wednesday, April 20th, at 3.15 p.m. It is hoped to make this an especially interesting meeting. The President wishes to entertain those members attending to dinner at the Booth Hall at 6.30 p.m. The programme will be: 3.15 p.m., meeting; 4.30 p.m., tea; 5 p.m., meeting resumed; 6.30 p.m., dinner. Members desirous of either showing specimens or sending notes on cases are asked to notify Dr. W. B. Butler (honorary secretary) on or before April 6th.

Meetings of Branches and Divisions.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.

AT a meeting of the City Division of the Metropolitan Counties Branch on January 4th, at the Metropolitan Hospital, Mr. K. J. ACTON DAVIS, F.R.C.S., read a paper on osteo-myelitis.

After giving a general account of this disease, Mr. Acton Davis described the process of inflammation. He said that the long bones were usually affected first, the cause being generally injury and dirt; the organism concerned was nearly always the *Staphylococcus aureus*, and more rarely the pneumococcus. The infective organism was brought to the bone by the blood stream, and inflammation commenced in one of the end arteries of the metaphysis; from this point it passed along the Haversian canals beneath the periosteum, and might spread from one epiphysis to another, stripping the whole of the diaphysis and cutting off the blood supply, with resultant necrosis. Toxin absorption was very rapid, and pyaemic abscesses often followed. When such abscesses occurred in the heart muscle and lungs operative treatment on the bone was of no avail, and death followed. Mr. Acton Davis referred to the statistics collected by St. Bartholomew's Hospital, which related to thirty cases observed during the five years before the war. In fifteen cases the tibia was affected, and in eight the femur; twenty-seven of the patients were under 15 years of age. Mr. Acton Davis condemned the gutter operation by reason of its length and severity; in many cases the bone was insufficiently opened. By removing the whole shaft of the diseased bone the periosteal surfaces come together, obliterating the cavity, and a new bone resulted. Removal of the shaft of the bone in this way obviated amputation and evacuated collections of pus pent up between the shaft and the periosteum behind it. Correct alignment of the limbs, if effected at once, prevented shortening. When the tibia or femur was involved the knee should be flexed and a Thomas splint, with extension, applied. Diaphysectomy reduced the mortality, and was efficient and quick. No sequestrum resulted, and the only risk was failure of regeneration of bone.

METROPOLITAN COUNTIES BRANCH: HARROW DIVISION.

A MEETING of the Harrow Division was held at Gayton Rooms, Harrow, on January 18th. Dr. BRONTÉ gave information as to the payment for performing *post-mortem* examinations and attending inquests.

Dr. C. GODDARD, O.B.E., medical officer of health for Harrow, in opening a discussion on the puerperal pyrexia notification regulations pointed out that, though the notification of puerperal fever had been obligatory for twenty-seven years, the Ministry of Health considered that it was often incomplete, causing statistics to be inaccurate and often misleading, also that the notification was frequently sent too late to arrange for any special treatment required. What the Ministry now insisted on was that the notification of puerperal pyrexia should be sent in as soon as the temperature reached 100.4° and lasted twenty-four hours. Dr. Goddard paid tribute to the low maternity death rate, and to the great care and skill exhibited in the district by all practitioners, but he insisted on the early notification, so that in necessitous cases he could provide a specialist, or nurses, or send the patient to hospital as the medical attendant advised. He stressed the point that the certificate and all matters relating to the patient were strictly confidential and private; there would be no inquisition or information given away to patients' friends. The new scheme was provided to assist the doctors and to benefit the patient while there was time and at the earliest moment.

A further meeting of the Division was held on February 15th. The rules of the Division were altered to bring them up to date. The question of sons and daughters of well-to-do people on the panel was brought up, and it was pointed out that the proportion of these to real workers seemed to be increasing. The matter was referred to the Panel Committee, as was also the question of panel patients being recommended by their approved societies to opticians rather than to ophthalmic surgeons. Dr. DARBY reported that matters in connexion with the hostel had been settled to the advantage of the Division members in nearly every point raised.

At a meeting of the Division held on March 15th a strong appeal was made for support of medical charities, and the matter was referred to the Executive Committee. Dr. LANGDON BROWN gave a very instructive lecture on diabetes.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held on March 15th at the South-Eastern Hospital for Children, Sydenham, when Lieut.-Colonel CHARLES THOMSON was in the chair.

The SECRETARY read a letter in regard to the Dogs' Protection Bill, and the following resolution was carried unanimously:

> That this Division wishes to denounce the infamous attempt to hinder scientific research and to delay the progress of medicine foreshadowed in the Dogs' Protection Bill, and hopes that it will be rejected by a large majority of the House of Commons, and resents the insulting reflections on the humanity of the medical profession.

It was decided to send copies of the resolution to the two members of Parliament for Lewisham.

The attention of members was called to the medical charities, and, as Dr. Charsley is already local secretary for the Royal Medical Benevolent Fund, it was agreed that he be charities secretary for the Division.

Members were asked to furnish statistics to the committee on puerperal morbidity under four heads.

Mr. STEWART showed a case of a girl with ichthyosis under the breast, and also an eye specimen removed from a case of meningitis.

Dr. LIGHTWOOD showed a boy with epicanthus and ptosis—or it might be ocular hypertelorism. The great breadth of the bridge of the nose was noticeable.

Dr. CARPMAEL showed a girl, aged 6, with fusiform enlargements of the fingers of both hands and enlargement of feet, commencing at the age of 1 year, and considered to be rheumatoid arthritis. He showed also a boy with a nail in his linea that caused acute suppuration of the joint for five months, but it was saved ultimately.

Dr. CHARSLEY showed the brain and other organs from a case of tuberculous meningitis, which had an acute course of eleven days from onset till death.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.

A MEETING of the Marylebone Division was held at 11, Chandos Street, W., on March 22nd, when Mr. BISHOP HARMAN presided, in the absence of the chairman of the Division. A discussion on the extension of specialist services under the National Health Insurance Act was opened by Dr. ELEANOR LOWRY, followed by Drs. JONSON HORNE and W. GRIFFITH. In the subsequent discussion Drs. BEDDOES, HAWTHORNE, GOODBODY, and TEMPLE GRAY took part. A resolution was adopted advising specialist ear and throat treatment under the Act.

The scale of minimum commencing salaries for medical officers of health was approved by the meeting.

Dr. C. O. HAWTHORNE gave a brief historical survey of the B.M.A. Charities Fund, after which the following resolution was carried.

> That this meeting of the Marylebone Division is in hearty sympathy with the aims of the Medical Charities Fund and cordially commends the claims of the fund to the members of the profession.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

A MEETING of the South-West Essex Division was held at Walthamstow Hospital on March 29th. The routine business having been transacted, the advisability of asking local members of Parliament to vote against the Dogs' Protection Bill was discussed. Dr. MABEL FOLEY hoped that if such a motion were passed her vote against it would be placed on record. She thought the profession was far from being unanimous on the subject. Dr. TODD-WHITE considered that human life was of more account than that of the lower animals, and dogs were necessary for the carrying out of certain experiments which could not be done on other animals. He moved that a letter be sent to the members of Parliament connected with the Division, asking them to oppose the second reading of the bill. Dr. HOWAT seconded, and the motion was carried by a large majority.

Dr. G. F. STILL, physician to the Hospital for Children, Great Ormond Street, gave a lecture on vomiting in childhood. Dr. Still said it should be kept in mind that children in the first few weeks of life did not, as a rule, vomit severely enough for a doctor to be called in, unless there was something serious the matter. The points of difference between pyloric stenosis and duodenal atresia were mentioned. Pyloric stenosis should not be diagnosed unless a tumour could be felt. It was necessary to look for the unexpected in a newborn child. Cases of meningitis and strangulated hernia were instanced. Posseting and ruminating in infants were discussed. The essential thing in the treatment of ruminating seemed to be to make the child cease enjoying the process. Operative treatment for spasm of the œsophagus—wrongly called cardiospasm—was condemned.

Dr. Still considered that vomiting with anorexia—generally seen in children from 1 to 3 years of age—was a nervous phenomenon and generally passed off without serious consequences. Two forms of morning vomiting were described—one associated with emotional upset, and the other with enlarged tonsils. Rather different was *night vomiting*, when the child woke up and vomited some hours after being put to bed. Probably defective gastric motility was a factor. Sedatives were useless in the treatment of night vomiting—nux vomica and pepsin were helpful. Finally, the prevalence of acetonuria in children was mentioned, and the fallacy of always regarding it as the cause of vomiting pointed out.

Drs. BROWN, TODD-WHITE, and HELEN WATSON took part in the after-discussion, and on the call of Dr. SCOTT, seconded by Dr. SANDERS, a hearty vote of thanks was accorded Dr. Still.

METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.

A GENERAL meeting of the Tower Hamlets Division was held at Limehouse Town Hall on March 16th, with Dr. E. B. HASTINGS in the chair. A letter from the Medical Secretary relating to the Dogs' Protection Bill was read, and it was resolved that letters be sent to the members of Parliament connected with the Division explaining the attitude of the profession in relation to the Dogs' Protection Bill, and asking them to vote against it.

The appeal for the Medical Charities Committee of the British Medical Association was considered, and the hope was expressed that all members of the Division would subscribe suitably.

The following officers were elected for 1927-28:

Chairman, Dr. E. B. *Hastings*. *Vice-Chairman*, Dr. W. H. F. *Oxley*. *Honorary Secretary*, Dr. L. Mushin. *Honorary Treasurer*, Dr. M. L. Barst. *Representative in Representative Body*, Dr. W. H. F. Oxley. *Deputy Representative*, Dr. L. Turiansky.

NORTH OF ENGLAND BRANCH: MORPETH DIVISION.

THE annual dinner of the Morpeth Division was held in the Grand Hotel, Ashington, on March 11th, when Dr. STEPHENSON, President, was in the chair. There was a gratifying attendance of members. The guests of the evening were Dr. FARQUHAR MURRAY and Mr. NORMAN HODGSON, honorary secretary, North of England Branch, both of Newcastle-on-Tyne. The toast of "The British Medical Association" was duly proposed by the CHAIRMAN, and heartily honoured. Dr. BEATON, who has been honorary secretary for the Morpeth Division for the past twenty years and President-Elect for the Branch, replied. In his remarks Dr. Beaton mentioned his earlier association with Dr. Cox in the days of the Northumberland and Newcastle Medical Society, and that the large and representative membership in the North of England were due to the strenuous efforts and personality of Dr. Cox. With song and story a most enjoyable evening was spent and the function was voted one of the most enjoyable yet held.

SUFFOLK BRANCH: WEST SUFFOLK DIVISION.

THE annual meeting of the West Suffolk Division was held at the West Suffolk General Hospital, Bury St. Edmunds, on March 29th, when Dr. J. R. DOBBIN was in the chair.

Items from the Medical Secretary's monthly circulars for January and February were considered. Arising out of the note about the Coroners Amendment Act, the question of travelling expenses was discussed, and it was also stated that in Essex a fee of 10s. 6d. was paid for a report to the coroner by the doctor when an inquest was not held. The honorary secretary was instructed to make inquiries about this. With regard to registration of maternity homes, it was suggested that the county medical officer of health should be written to, asking what steps the county council had taken with regard to the by-laws to be adopted by it. The secretary was instructed to point out that in the opinion of the Division it was quite unnecessary that the amount of payments made by patients to doctors should be recorded.

The following officers were elected:

Chairman, Dr. Grace Griffith. *Secretary*, Dr. B. E. A. Batt (re-elected with a cordial vote of thanks for past services). *Representative in Representative Body*, Dr. E. C. Hardwicke. *Deputy Representative*, Dr. J. G. B. Shand. *Golf Competition Subcommittee*, Dr. F. R. Barwell, Dr. B. E. A. Batt, and Dr. E. C. Hardwicke.

On consideration of the circular from headquarters about the Dogs' Protection Bill, the secretary was instructed to write to the members of Parliament—namely, the Right Hon. Walter Guinness and Colonel H. Burton—asking them to oppose the bill.

A report from the West Suffolk Medical Charities Committee was received in which it was stated that subscriptions to date amounted to £48.

A hearty vote of thanks to the retiring chairman, Dr. Dobbin, was carried with acclamation, and the members then adjourned for tea.

GENERAL MEDICAL COUNCIL.

DENTAL COMMITTEE.

Medical Practitioners and Dental Benefit.

AT a recent meeting of the Dental Executive Committee of the General Medical Council a communication was considered from a medical practitioner complaining that he was not allowed to sign letters relating to dental benefit under the additional benefit scheme of the National Health Insurance Acts. The Ministry of Health and the Scottish Board of Health have appointed a certain number of dentists and approved societies' representatives to form a dental benefit joint committee. This committee has no statutory powers, but derives its jurisdiction from the voluntary acceptance by both the dentists and the approved societies of the conditions set out in the model dental letter. The use of this letter, in accordance with the provisions of the approved schemes adopted by the societies under which the benefit is provided, is limited to registered dentists. The medical practitioner who has raised the question is entitled as a medical practitioner to practise dentistry, but he is not entitled to have his name entered on the *Dentists Register*, because he possesses no dental qualification and did not make application under the Dentists Act, 1921. He stated that he found himself under a disadvantage in consequence of the fact that he was not allowed to sign dental letters, and he questioned whether his rights as a medical practitioner were being upheld. He was informed by the direction of the President of the General Medical Council that he was not prevented from practising dentistry, and that his privileges as a medical practitioner were not infringed, but that he could not claim to be a registered dentist. The Dental Executive Committee approved the action of the President.

New South Wales Dentists Bill.

A communication was received from the Dominions Office transmitting a bill recently introduced to amend the Dentists Acts of New South Wales. In this bill the penal sections are altered by the substitution of the word "misconduct" for "infamous conduct," and include under this heading the use of a description other than one granted by some body recognized by the New South Wales Board, practising in a name other than the practitioner's own, allowing his name to appear on premises where he is not in regular attendance, and advertising other than in the manner prescribed. Complainants alleging misconduct have to make a deposit of £5, which will be forfeited if the complaint is proved vexatious or frivolous.

National Insurance.

MEDICAL BENEFITS.

DISCUSSION AT FACULTY OF INSURANCE.

AT the annual general meeting of the Faculty of Insurance, held in London on April 2nd, one of the subjects set down for discussion was "Medical benefits."

Lord COZENS-HARDY, President of the National Association of Insurance Committees, opened with a paper which consisted almost entirely of a summary of the evidence—especially the evidence of the British Medical Association—presented to the Royal Commission and the conclusions of the majority report. He declared himself personally in accord with the recommendations of the majority of the Commission with regard to existing and prospective medical benefits, but he dissented strongly from the recommendation that the powers and duties of Insurance Committees should be transferred to committees of the appropriate local authorities, containing possibly a proportion of co-opted members. So long as medical benefit was financed out of insurance funds it seemed contrary to all reason to remove its administration from the representatives of the contributors and hand it over to local authorities elected largely on political grounds. He would apply to that position the remark of the Commission itself with regard to the approved society system: "We feel that it is to the public advantage that this great scheme should be administered by the representatives of the insured persons themselves, and that the governing bodies should have that full responsibility for the results of their own activities without which it is as hopeless as it would be unreasonable to look for a high standard of efficiency and vigilance."

Dr. H. B. BRACKENBURY, who followed, said that when medical benefit—that is to say, the medical service given by the profession to insured persons—was compared with anything else the conclusions reached must necessarily depend upon what was taken as a standard of comparison. If the service were compared, as it often was, with an ideal state of things in which there were no imperfections, in which everything was as it should be, alike with the doctor, the insured person, and the

means by which they were brought into relationship, then the present service would be found to have many defects and deficiencies. Such imperfections were felt perhaps more keenly by members of the medical profession themselves than by anybody else. But it must not be forgotten that that was not always a practical standard of comparison. If, on the other hand, the service were compared with the state of things which existed before there was any insurance service at all the result was entirely different. From his own experience and from that of many others in the profession he could affirm the truth of the evidence given to the Commission by the British Medical Association that the medical service was superior to that given in even the best of the old clubs, and vastly superior to that given in a very large number—perhaps the majority—of the old clubs. But there was still another standard of comparison, less frequently taken, but very apposite—namely, private practice as it was carried on to-day among any class of the population who could be compared approximately with the insurance class. There again, from his own knowledge, he could say that many of the things sometimes pointed out as deficiencies or defects in insurance practice were not peculiar to that class of practice, but permeated all medical practice, private or insurance. It was not quite fair to pick out some undoubted deficiencies as if they belonged to insurance practice alone, when in fact they appertained as much, if not more, to private practice. They were consequent upon personal idiosyncrasy in some cases and upon the conditions under which a good deal of medical practice had to be carried on. His deliberate opinion was that the attention, courtesy, and skill given by the general practitioner to his insured patients was as a whole rather higher than that given to private patients, instead of, as had sometimes been said, rather lower. (Some laughter.) Those who were present had occasion, by reason of their official position in approved societies and their intercourse with insured persons, to be made aware of various respects in which medical practice did not work smoothly in individual cases, but, on the other hand, there were many thousands of cases in which the relations between the practitioner and his private patient were not smooth either.

One suggestion which the Commission turned down was that there had been an undue tendency on the part of insurance practitioners to make use of hospitals to do the work which they were under contract to do themselves. That was a statement which had often—though less frequently of late—been made, and there might have been a few instances in the conduct of the individual doctor in a particular locality which gave colour to it. But the broad fact was as the Commission had reported. Arising out of this, it must not be assumed that everything was wrong with the insurance practitioner's diagnosis, certification, and treatment, while everything was right with the diagnosis, certification, and treatment in the out-patient department. From the point of view of certification the worst cases he had ever known in his experience had been out-patient cases. He had known cases, not one or two but a considerable number in total—though, of course, in proportion to the whole number of out-patients in the country very small indeed—in which the insured persons had been attending at out-patient departments every fortnight for perhaps four years, and had never been examined since the first occasion of their attendance. Other patients had gone on attending for eighteen months or two years without any further examination. Therefore, he strongly resisted the assumption that the insurance practitioner was necessarily inferior to the out-patient department of the hospital in the attendance and treatment he provided.

Turning, finally, to the question of additional benefits, Dr. Brackenbury said that the Royal Commission had put dental benefit into its proper place in the order of requirements. There was no doubt that defective teeth and unclean mouths were the cause of a good deal of the more chronic type of illness, but there was just as much likelihood that the septic focus might be the tonsils, the nasal sinuses, or the bowels, and it would be wholly wrong to say, "We will make special provision for you if your general trouble is caused by your teeth, but if you have derived it from any other part of your body we will let you go your own way, and make no special provision." Dental treatment must be in its right place as one of the special forms of treatment required.

In the course of some brief general discussion, Mr. G. S. PIKE (National Amalgamated Approved Society) deplored the absence of co-operation between the principal parties in national health insurance. The approved societies and the medical profession had never really got together. He was afraid there was still a little resentment on both sides. The model system would be that of the governing board of a hospital which combined medical and lay elements. There was certainly some sort of co-operation on Insurance Committees, but those bodies were concerned only with giving administrative effect to a policy already laid down for them. What he wanted to see was co-operation in the framing of policy, and he begged the medical profession to consider whether the time had not arrived for a new orientation, and whether a tripartite governing body, bringing in the Ministry, the approved societies, and the profession, might not be instituted.

Mr. H. LESSER (ex-chairman, London Insurance Committee) commented upon Dr. Brackenbury's "cryptic" reference to dental benefit. The only way in which he could understand the reference was that, if body poisons could be due to other sources than the teeth, it emphasized the need for special expert and consultative services. One of the recommendations made by the Royal Commission was that such services should immediately be set up, and he urged that there was need for legislation at once to bring into effect that part of the Commission's report which dealt with such services. At the same time, he could not think that the prominence given to dental benefit was by any means unjustified, having regard to the dental condition of the population, the widespread need of such a service, and the fact that perhaps millions of insured persons, given the necessary financial help, would take advantage of it.

LONDON INSURANCE COMMITTEE.

A MEETING of the London Insurance Committee was held on March 24th, with Dr. DAVID DAVIS in the chair.

Inaccurate Dispensing.

A number of cases of inaccurate dispensing by chemists were reported by the Pharmaceutical Service Subcommittee, but in several of the cases only a caution was recommended, in others a censure. Dr. CARDALE protested against the general run of the recommendations on the ground that they amounted to a whitewashing of gross irregularity. In one case in which a caution was recommended by the subcommittee (though the full committee made it a censure) the chemist had put in 98.5 per cent. too much ammonium carbonate. It appeared that the chemist, while preparing the mixture, had been called away, and on returning added a further quantity of ammonium carbonate, not realizing that he had already placed sufficient in the container.

Insurance Practitioners Fined.

Two cases were reported to the committee in which, the practitioners having failed properly to keep medical records, the Minister had decided to withhold in the one case £40 and in the other case £50 from the moneys payable to the committee in respect of medical benefit, with a view to these sums being deducted from the remuneration payable to the practitioners. The Minister stated that in deciding on the amount to be withheld he had had regard to the fact that both practitioners were making arrangements to keep the records properly in future, but that in fairness to other practitioners who were keeping records it was not possible to overlook the fact that these two practitioners had failed in the past to keep them in the prescribed manner, although their attention had been drawn to the matter by the Regional Medical Officer. In another case in which the committee had previously found that a breach of the medical certification rules had been committed, but had not recommended any monetary penalty, the Minister of Health stated that he was of opinion that the facts of the case appeared to warrant the withholding of money—the practitioner had furnished certificates over a period of six weeks without seeing the insured person—and he invited the observations of the committee on this matter before taking action. The committee decided to adhere to its previous decision, which was that the practitioner be censured, and to make no recommendation with regard to the withholding of money, but as his was the second case of the kind which had been referred back to the committee by the Minister it also resolved to ask the Minister to receive a deputation with regard to the practice to be followed by the committee in making representations to the Minister as to the infliction of a monetary penalty.

In the case of alleged "farming out" of insurance practice to an assistant (reported in the proceedings of the London Panel Committee last week) the Insurance Committee found itself unable to do otherwise than accept the ruling of the Ministry, having no evidence that there had been any break in the continuity of treatment or that any patient had unsuccessfully sought to obtain the personal services of the principal. At the same time, the pronouncement of the Ministry that, although such a procedure in carrying on a practice was to be deprecated, the letter of the regulation had not been infringed, and it was not possible to act on the committee's recommendation to withhold money, disclosed a state of affairs which was never contemplated by the committee, and one on which the Joint Consultative Committee (composed of members of the Insurance and Panel Committees) should be asked to report.

Numbers of Prescriptions.

The number of prescriptions dispensed for insured persons in London in 1926 was 7,890,186, at a total cost of £271,317. The mean number of insured pers[illegible] lists was 1,665,259. The average cost per [illegible] of ingredients and dispensing fee, was 8.25 pe[illegible] of prescriptions per person was 4.74, and the average total cost per person 39.10 pence. The number of prescriptions dispensed personally by practitioners was 1,235, the total cost being £194, an average cost per subscription of 37.81 pence. The number of prescriptions for serums and vaccines dispensed by chemists was 1,451, and of vaccines dispensed personally by practitioners 876. The number of prescriptions for insulin was 8,758, the total cost being £2,918, and 175 hypodermic syringes for the self-administration of insulin were provided.

Correspondence.

Anaesthetic Fees.

SIR,—I am pleased that my letter has been noticed by Dr. Brackenbury, who has come forward with the definite statement that no provision was ever made in reference to the proportion of the general capitation fee which covers payment to panel practitioners for administration of anaesthetics to their own patients. I am informed by a delegate to the Conference which discussed the question of a capitation fee that an extra sixpence was obtained in return for which we were pledged to that increased service, on the initiative of Dr. Brackenbury himself. It is a pledge which binds us to give anaesthetics, not only in cases coming within the scope of our work under the Act, but outside it, and, if rigidly applied, could be extended to cases receiving dental treatment as well. I believe that we have always had to keep records, to send in quarterly reports of phthisical cases, and the obligation of giving emergency treatment to one another's patients was evidently not included in that pledge, as it carries a separate fee. In these circumstances it stands to reason that we should not have got the increased capitation fee but for the undertaking given by Dr. Brackenbury that administration of anaesthetics would form part of medical benefit. If I am rightly informed in connexion with this question of a definite pledge and the ensuing extra sixpence—and I have no reason to believe my informant to be wrong—it is not unreasonable that I should have come to the conclusion referred to by Dr. Brackenbury as a delusion.

The burden of disproof lies with Dr. Brackenbury, and he must tell us equally definitely whether the pledge he gave, and that alone, had or had not an unquestionable bearing upon the grant that was eventually made. I have no wish to find fault with Dr. Brackenbury in this connexion. We all acknowledge that he did his best to secure an adequate remuneration for our services, and no doubt his offer of an increased service helped to crown his efforts with success. Dr. Brackenbury will agree, I am sure, that those panel practitioners who refuse to avail themselves of the facilities offered them for administering anaesthetics to their patients requiring surgical treatment in some Poor Law and voluntary hospitals in their own districts, and to which they have access, are obviously not carrying out that part of the contract to which they are pledged, and consequently are not justifying the capitation fee they receive. On the other hand, if they made use of those facilities, they would not be adding considerably to the work of the part-time staffs of those hospitals, nor would they be relegating so lightly and inconsiderately their responsibilities and obligations to others whose duties are already by no means light, and they would have the satisfaction of feeling that as far as they can they are doing all they are expected to do under the terms of their contract. The bargain that was made should be observed by all, and in circumstances which render full observance absolutely impossible those responsibilities and obligations are none the less binding. I hardly think that when Dr. Brackenbury made it he contemplated the release from the obligations it entails of even those panel practitioners whose patients are in receipt of operative treatment in hospitals to which they have no access. As things are it is unavoidably so, but, as regards other hospitals to which they do have access, I am sure he will agree that my complaint is amply justified and deserves redress.—I am, etc.,

Greenhithe, Kent, March 27th. D. W. STANDLEY.

** We have shown this letter to Dr. Brackenbury, and his reply is as follows:

SIR,—All that I was concerned with in my letter was to correct the statement that the insurance practitioner was "in receipt of sixpence for every patient" in respect of his obligation to provide an anaesthetist when necessary. I did not, and do not, wish to enter into any discussion as to the circumstances in which a practitioner should or should not arrange for an anaesthetist for his patient, or those in which he could, or could not, properly claim a fee therefor. A statement on this matter has been issued to Panel Committees and insurance practitioners by the Insurance Acts Committee, and an authoritative, but not official, account of the position will be found on pages 71 and 72 of Harris and Sack's little book on *Medical Insurance Practice*.

Nevertheless, it may be well to put on record certain facts on which there seems to be some danger of misunderstanding, as evidenced by Dr. Standley's further letter.

1. The obligations of insurance practitioners are set out in the Medical Benefit Regulations and Terms of Service. For these a certain remuneration is given. From time to time minor, but important, modifications have been made in the terms of service, and when the question of remuneration has come up for reconsideration these modifications have been taken into account, among other things, as affecting that question. But no particular obligation has been regarded as carrying with it any definite proportion of the total fee; nor, apart from such general reconsideration of both terms of service and remuneration, has there been any "pledge" or "ensuing extra" payment of sixpence or any other amount.

2. The special payments made to individual practitioners in response to their claims, whether as to anaesthetists or as to emergency treatment, are not paid out of any additional fund, but are all met from the common practitioners' fund of the area, thereby reducing the sum distributable to the practitioners of the area for ordinary treatment. It is for this reason that in some areas Panel Committees have urged that practitioners should render these services for one another as a matter of courtesy without making any claims on the fund.

3. When an operation is performed in a hospital there is no obligation on an insurance practitioner to provide an anaesthetist or to give an anaesthetic, nor is it permissible for him to receive a payment from the practitioners' fund for such service, unless two conditions are fulfilled: (*a*) that the hospital is one in which every practitioner is at liberty to treat and be responsible for his own patient; (*b*) that there is no restriction on the choice of anaesthetist. Moreover, a Panel Committee may by a clause in its distribution scheme provide that no such payment shall be sanctioned even when the above conditions are fulfilled.

4. The Insurance Acts Committee holds that dental operations are wholly outside medical benefit, and that therefore the payment from the practitioners' fund of any fee for the provision of an anaesthetist for a dental operation cannot be sanctioned.—I am, etc.,

London, N.W.11, March 30th. H. B. BRACKENBURY.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander G. V. Hobbs to the *Cardiff* as Squadron Medical Officer.

Surgeon Lieutenant Commander J. B. Crawford is promoted to the rank of Surgeon Commander.

Surgeon Lieutenant Commanders J. S. Elliott to the *Concord*; L. W. Gemmell to the *Malabar* for R.N. Hospital, Bermuda, as bacteriological specialist.

Surgeon Lieutenants J. Hamilton to the *Pembroke* for R.M. Infirmary, Chatham; W. Flynn to the *Ark Royal*; G. Rorison to the *Tiger*.

Surgeon Lieutenant D. Duncan transferred to permanent list with original seniority of October 15th, 1924.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant Commander J. Lorimer to the *Marlborough* for fourteen days' training.

Probationary Surgeon Lieutenant L. C. Rogers to the *Repulse* for fourteen days' training.

Probationary Surgeon Sublieutenant L. D. Nelson to be Surgeon Sublieutenant.

W. McO. Macgregor and G. H. Bradshaw have entered as Probationary Surgeon Sublieutenants and attached to the London Division.

ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel M. D. Ahern, O.B.E., is restored to the establishment.

Lieut.-Colonel C. M. Row to be temporary Captain and relinquishes the rank of Lieutenant-Colonel.

Major R. O'Kelly is placed on the half-pay list on account of ill health.

The following Captains to be Majors: G. H. Haines, M.C., P. J. S. O'Grady (prov.), R. D. Davy, M.C. (prov.), F. McKibbin.

Captain (local Major) J. W. Malcolm, O.B.E., M.C., relinquishes his local rank on ceasing to be employed with the Iraq levies.

ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants J. D. Leahy, M.C., to No. 1 Flying Training School, Netheravon; W. J. G. Walker to the Armament and Gunnery School, Eastchurch; H. E. H. Tracy (Hon. Squadron Leader) and W. E. Barnes to No. 1 School of Technical Training (Apprentices), Halton.

Flying Officers M. D. Rawkins to No. 1 School of Technical Training (Apprentices), Halton; E. J. T. McWeeney to Research Laboratory and Medical Officers' School of Instruction on appointment to a short-service commission.

MILITIA.

ROYAL ARMY MEDICAL CORPS.

Majors T. Walker, M.C., E. S. B. Hamilton, M.C., L. W. O. Taylor, and G. F. V. Leary relinquish their commissions and retain the rank of Major.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Honorary Major-General Sir Berkeley G. A. Moynihan, Bt., vacates the appointment of Honorary Colonel, R.A.M.C. Units, 49th (West Riding) Division, T.A., on expiration of tenure.

Colonel A. B. Soltau, C.M.G., T.D., K.H.P., to be Honorary Colonel R.A.M.C., 43rd (Wessex) Division, T.A.

Colonel A. D. Sharp, C.B., C.M.G., T.D., K.H.S., to be Honorary Colonel R.A.M.C. Units, 49th (West Riding) Division, T.A.

Honorary Colonel J. V. D. Rutherford, V.D., vacates the appointment of Honorary Colonel, R.A.M.C. Units, 50th (Northumbrian) Division, T.A., on expiration of tenure.

Colonel J. Clay, C.B.E., T.D., retired T.A., to be Honorary Colonel R.A.M.C. Units, 50th (Northumbrian) Division, T.A.

Lieutenant J. A. Stobbs ceases to hold a commission in the Territorial Army.

F. J. L. Lang to be Lieutenant, with precedence as from July 11th, 1926.

General Hospitals.—To be Lieutenants: W. L. Lamb and R. L. Turner, [illegible] 7th, 1926.

[illegible] J. B. McGovern to command the 7th

VACANCIES.

ASHINGTON HOSPITAL.—Junior House-Surgeon. Salary at the rate of £100 per annum.

BIRMINGHAM AND MIDLAND EYE HOSPITAL.—Resident Surgical Officer. Salary £150 per annum.

BRITISH RED CROSS AND ORDER OF ST. JOHN.—Assistant Medical Officer (male) at the East Lancashire Tuberculosis Colony, Great Barrow. Salary £250 per annum.

BURNLEY: VICTORIA HOSPITAL.—House-Surgeon. Salary £150 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—Casualty Officer and Resident Anaesthetist (male, unmarried). Salary at the rate of £130 per annum.

CHARING CROSS HOSPITAL INSTITUTE OF PATHOLOGY.—Assistant Pathologist. Salary at the rate of £500 per annum, rising to £600 after six months.

CHESTER ROYAL INFIRMARY.—House-Surgeon (male). Salary £150 per annum.

CHESTERFIELD AND NORTH DERBYSHIRE ROYAL HOSPITAL.—Honorary Ophthalmic Surgeon.

DERBYSHIRE ROYAL INFIRMARY, Derby.—(1) House-Physician. (2) Assistant House-Surgeon and Casualty Officer. Salaries at the rate of £150 per annum.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—(1) House-Physician. (2) House-Surgeon. (3) Whole-time Casualty Officer. Salary at the rate of £125 per annum.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum.

HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—(1) House-Surgeon. (2) House-Physician. (3) Casualty Medical Officer. Salary at the rate of £100 per annum each.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.3.—Three House-Physicians. Honorarium £50 for six months.

IPSWICH: EAST SUFFOLK AND IPSWICH HOSPITAL.—House-Surgeon (male) for Ear, Nose, and Throat Department and General Surgery. Salary at the rate of £100 per annum.

JERUSALEM OPHTHALMIC HOSPITAL.—(1) Subwarden. (2) Registrar or House-Surgeon.

LANCASTER BOROUGH.—Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £500 per annum, rising to £600 on completion of one year's approved service.

LEEDS CITY.—Resident Medical Officer at the City of Leeds Sanatorium at Gateforth (unmarried). Salary £400 per annum.

LEIGH INFIRMARY, Lancashire.—Resident House-Surgeon (male, unmarried). Salary £150 per annum.

LONDON HOSPITAL, E.—Physician to the Skin Department.

LONDON HOSPITAL DENTAL SCHOOL, Mile End, E.1.—Demonstrator. Salary £200 per annum.

MAIDSTONE: KENT COUNTY MENTAL HOSPITAL.—Assistant Medical Officer (male, unmarried). Salary £300 per annum.

MANCHESTER: ANCOATS HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

MANCHESTER CITY.—Assistant Tuberculosis Officer (male). Salary £600 per annum.

MIDDLESEX COUNTY COUNCIL.—Assistant Dental Officer. Salary at the rate of £500 per annum, rising to £700.

MILLER GENERAL HO[illegible]atient Officer (male, unmarried)

NORWICH: NORFOLK [illegible] Salary £120 per annum.

PORTSMOUTH: ROYAL PORTSMOUTH HOSPITAL.—Casualty Officer (male). Salary at the rate of £100 per annum.

PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—Two Honorary Anaesthetists. Honorarium £40 per annum.

PUBLIC DISPENSARY, 122, Drury Lane, W.C.—Resident Medical Officer (unmarried). Salary £105 per annum.

PUTNEY HOSPITAL, S.W.15.—Resident Medical Officer (male). Salary £150 per annum.

READING: ROYAL BERKSHIRE HOSPITAL.—House-Surgeon.—Salary £150 per annum.

RICHMOND, SURREY: ROYAL HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £100 per annum, rising to £150 on appointment as Senior after six months.

ROYAL CHEST HOSPITAL, City Road, E.C.—(1) Resident Medical Officer. (2) House-Physician. Salary at the rate of £150 and £100 per annum respectively.

ROYAL NORTHERN HOSPITAL, Holloway, N.7.—House-Surgeon. Salary at the rate of £70 per annum.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, Waterloo Road, S.E.1.—Non-resident Casualty Officer (male). Salary £150 per annum.

SALFORD UNION INFIRMARY.—Radiologist. Salary at the rate of £150 per annum.

SHEFFIELD ROYAL HOSPITAL.—Resident House-Physician. Salary at the rate of £80 per annum.

STOCKTON AND THORNABY HOSPITAL, Stockton-on-Tees.—Honorary Ear, Nose, and Throat Surgeon.

TUNBRIDGE WELLS AND COUNTIES GENERAL HOSPITAL.—House-Surgeon (male, unmarried). Salary £160 per annum.

VENTNOR: ROYAL NATIONAL HOSPITAL FOR CONSUMPTION.—Medical Superintendent. Salary £1,000 per annum.

WAKEFIELD: CLAYTON HOSPITAL.—House-Surgeon. Salary £150 per annum, rising to £175 after six months.

WEST END HOSPITAL FOR NERVOUS DISEASES.—Casualty Physician. Remuneration £200 per annum.

WEST HAM COUNTY BOROUGH.—Assistant Medical Officer, Maternity and Child Welfare (female). Salary £600 per annum.

WHITTINGHAM: COUNTY MENTAL HOSPITAL.—Sixth Assistant Medical Officer. Salary £350 per annum, rising to £450.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

APPOINTMENTS.

ALEXANDER, A. D. P., M.B., Ch.B.Glas., House-Physician to the Royal Infirmary, Sunderland.

GEFFEN, D. H., M.D.Lond., D.P.H., Medical Officer of Health for Enfield.

HARLOW, F. Wilson, M.B., F.R.C.S.Eng., Resident Medical Officer, Royal Northern Hospital, Holloway, N.7.

HORWOOD, Oswald R., M.A.Camb., M.R.C.S., L.R.C.P.Lond., Assistant School Medical Officer for Coventry.

KEITH, F. L., M.D.Aberd., D.P.H., Medical Officer of Health for Bethnal Green.

LAMBIH, V. M., M.B., Ch.B., B.Sc. (P.H.) Edin., District Medical Officer and Public Vaccinator for the Combined Nos. 3 and 4 Districts of Bilston, and Acting Medical Officer of Health, School Medical Officer, etc., for Urban District of Bilston.

SOFFREY, M., M.D.Leeds, F.R.C.S.Edin., Assistant Surgeon in the Ear, Nose, and Throat Department of the London Jewish Hospital, Stepney Green, vice E. H. Richards, F.R.C.S., resigned.

TOWNROW, Vincent, M.B., B.S., F.R.C.S., Surgeon to the Ear, Nose, and Throat Department at the Sheffield Royal Hospital.

WILLIAMS, Hubert C. Maurice, M.R.C.S., L.R.C.P., D.P.H., Assistant Medical Officer of Health, County Borough and Port of Southampton.

WORTHINGTON, A., M.B., Ch.B.Edin., D.P.H., Medical Officer of Health for Stoke-on-Trent.

CERTIFYING FACTORY SURGEONS.—W. R. Griffith, L.R.C.P. and S.Edin., L.R.F.P.S.Glas., for the Clwt-y-Bont District, co. Carnarvon; A. H. C. Hill, M.R.C.S.Eng., L.R.C.P.Lond., for the Calvert District, co. Buckingham; W. Megaw, M.B., B.Ch., B.A.O.Belf., for the Audley District, co. Stafford; S. K. Vines, L.R.C.P.Edin., L.S.A., for the Allendale District, co. Northumberland; J. Wells, M.R.C.S., L.R.C.P., for the Dilston District, co. Stafford.

DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.

War Section.—Mon., 4.30 p.m., Annual General Meeting: Election of Officers and Council for 1927-28. Major T. J. Mitchell, R.A.M.C.: Man Power and the Medical Service in Relation to Some of the Principles of War.

Section of Odontology.—Mon., 8 p.m., Professor Gottlieb (Vienna): The Gingival Margin.

General Meeting of Fellows.—Tues., 5.30 p.m. Ballot for Fellowship.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—Mon., 5 p.m., Museum Demonstration by Mr. C. E. Shattock: Joints.

POST-GRADUATE COURSES AND LECTURES.

ROYAL CHEST HOSPITAL, City Road, E.C.—Tues., 3.15 p.m., Diagnosis and Treatment of Bronchial Asthma.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General [illegible]15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and [illegible] Operations. Tues., 2.30 to 5 p.m., Medical, [illegible] and Ear Clinics; Operations. Wed., 2.30 to [illegible]d Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations; 4.30 p.m., Demonstration on Selected Cases of Nerve Diseases.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Gartnavel Mental Hospital: Wed., 4.15 p.m., Mental Cases.

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Conditions simulating Heart Disease.

SCIENCE COMMITTEE:

SECOND REPORT OF THE SUBCOMMITTEE ON RHEUMATIC HEART DISEASE IN CHILDREN.

PREVENTION AND CONTROL OF RHEUMATIC INFECTION IN CHILDREN.

PREFACE.

e Subcommittee as now constituted is as follows: Sir mphry Rolleston, Bt. (Chairman), Dr. George A. Allan, . H. B. Brackenbury, Dr. Carey F. Coombs, Dr. C. O. wthorne, Dr. F. J. Poynton, Dr. A. P. Thomson, and . Reginald Miller (Honorary Secretary).

n July, 1926, the Subcommittee on Rheumatic Heart sease presented their first report; this was published as special Supplement to the BRITISH MEDICAL JOURNAL July 3rd, 1926. It consisted of a Preface signed by Chairman on behalf of the Subcommittee, followed by r separate parts written by individual members of the bcommittee, as follows:

1. On the Environmental and other Predisposing Causes of Rheumatic Infection, by Dr. R. Miller.
2. On Recent Investigations into the Bacteriology of the Rheumatic Infection, by Dr. C. F. Coombs and Dr. F. J. Poynton.
3. On the Effect of Tonsillectomy on Rheumatic Infection in Children, by Dr. R. Miller.
4. On the Organized After-Care of Rheumatic Children in Great Britain, by Dr. G. A. Allan with Dr. A. P. Thomson.

The proposals which were made by the Subcommittee ere:

1. Stricter attention to the prevention of damp in dwelling-houses.
2. Further investigation of housing conditions and of the geographical distribution of the disease.
3. Pooling of material for investigation of the bacteriological aspects of rheumatic infection in childhood.
4. Careful and discriminating use of the operation of tonsillectomy.
5. Rapid expansion of the accommodation available for prolonged institutional care of rheumatic children.

With the presentation of their Report the Subcommittee hought that they had fulfilled their terms of reference. They, however, continued to meet to discuss, somewhat informally, the lines on which any national effort to cope with the problem of juvenile rheumatism should proceed, and also to give assistance to some members of the Subcommittee who were undertaking special work in harmony with the proposals of the Report mentioned above. At these meetings the Subcommittee were assisted by Dr. H. B. Brackenbury, Chairman of the Representative Body of the Association, and by Dr. J. Alison Glover of the Ministry of Health, who attended at the Chairman's invitation.

The Science Committee, at their meeting on November 12th, 1926, passed the following resolution:

> "*Subcommittee on Rheumatic Heart Disease in Children.*—That a Subcommittee consisting of Chairman of the Science Committee, C. O. Hawthorne, Sir Humphry Rolleston (as Chairman), G. A. Allan, H. B. Brackenbury, Carey F. Coombs, J. A. Glover, Reginald Miller, F. J. Poynton, and A. P. Thomson, be appointed to advise the Science Committee on the rheumatism problem generally, and that the Subcommittee be given power to co-opt two additional members."

Dr. Glover regretted that, as an official of the Ministry of Health, he was unable to accept full membership of the Subcommittee. He attended the meetings in an advisory capacity without voting power in matters of policy.

The Subcommittee, therefore, thus reappointed and enlarged, considered that they could not do better than attempt, by means of a second report, to enunciate the principles and sketch out the lines of an organized effort on a large scale for the prevention and control of the rheumatic infection among the children of this country. In making this decision they were actuated by three considerations. In the first place, rheumatic infection is so prevalent among the poorer children of Great Britain that some organized effort against the disease on a national scale is long overdue. Secondly, medical opinion is largely aware of this fact, as the reception of the Subcommittee's

previous report has proved. Thirdly, much concerning the prevention and treatment of the disease has necessarily been omitted from the first report as outside the scope of the work on which the Subcommittee were then engaged.

In preparation for this second Report the Honorary Secretary drew up a document under the headings of Prevention, Early Detection, Supervision, etc., to form a basis for discussion by the Subcommittee. This document, expanded in form, and approved by the Subcommittee, is published as an Appendix to the Report.

REPORT.

Any organized effort on a large scale to prevent and control the rheumatic infection among the children of this country will necessarily require the co-operation of every branch of the medical and ancillary services, and it is the purpose of this Report to indicate what particular form of assistance can be rendered by the several branches of the medical profession. Before, however, proceeding to discuss the matter in detail there are two preliminary considerations on which stress must be laid. In the Subcommittee's view these are of such moment that their acceptance is of fundamental importance for the right understanding and correct handling of the problem of juvenile rheumatism. They are:

First, the problem of rheumatic heart disease in children is the problem of a systemic infection, not of a static disease of an important organ; in other words, every case of rheumatic heart disease in a child is primarily a rheumatic rather than a cardiac problem, and is, therefore, one for consideration on the broadest principles of medicine.

Secondly, this being so, the medical care of such children should be left to those who have immediately at hand the means of treatment for any and every rheumatic condition or emergency—that is to say, to practitioners (where means permit) or to hospitals, rather than to any *ad hoc* institutions or clinics which are divorced from facilities for dealing with the serious infective problems that may arise at any moment in rheumatic children. Thus, as a broad statement of their view, the Subcommittee endorse the terms of the resolution submitted by the Representative Body of the Association at the Nottingham Annual Meeting for consideration by the Council—namely, that

> " (1) the selection of patients should be mainly through the various branches of the public health services, and (2) the clinical treatment should, wherever possible, be by means of private practitioners and voluntary hospitals." (BRITISH MEDICAL JOURNAL, July 31st, 1926, SUPPLEMENT, p. 83.)

With these principles enunciated, the Subcommittee now proceed to sketch out the functions of the various medical services in connexion with an organized effort to prevent and control juvenile rheumatic infection.

PUBLIC HEALTH AUTHORITIES.

Damp Dwellings.

The Subcommittee are impressed by the importance of the housing factor in the production of rheumatic infection and heart disease in children, and they are of opinion that the public health authorities can give most valuable help in the prevention of the disease by stricter attention to the prevention and treatment of damp in the homes of the poorer classes. (Appendix, Sec. 2 and 3.)

Rest Homes (Hospital-Schools).

The provision of Rest Homes on the lines indicated later in this Report, or of wards allocated to a similar purpose, is an immediate necessity in all large towns, and where such are not provided by the charitable public it may fall upon the local health authorities to provide, or assist in providing them.

Notification.

If an organized attempt is to be made to deal with the housing conditions of rheumatic patients it is difficult to see how compulsory notification can be avoided, but the Subcommittee are not prepared on general grounds to advise that rheumatic infection in children should be made a notifiable disease. Where, however, a locality is provided with a scheme for the investigation, supervision, and treatment of the cases in a given area, local notification may be of value, though it is not to be anticipated that, even here, its value will be very great. Legally, compulsory notification can only be applied to an infective disease, endemic or epidemic; consequently such notification would embrace only *active* rheumatic infection, and would necessarily include every form of such active infection. It would be impossible, for instance, to make rheumatic heart disease alone notifiable under such a scheme.

Voluntary notification, where such could be set working, might thus have an advantage over compulsory measures. Here it would be possible to restrict such notification to cases of rheumatic heart disease, and to include quiescent and old cases as well as those showing infective activity at the time of notification.

Formulae for compulsory and voluntary notification are given in the Appendix (Sections 8 and 9).

SCHOOL MEDICAL SERVICE.

Under this heading are included the administrative, medical, visiting, and nursing services in connexion with the public elementary schools.

That rheumatic infection is frequent among the children of the public elementary schools, and rare in those of the private and public schools of the richer classes, must be accepted as proved. Yet on the evidence before them the Subcommittee do not regard the school environment itself as a potent factor in originating the disease in the children of the poorer classes; but this is not to say that the school environment is unimportant. In addition to non-rheumatic children attending these schools there are many already slightly infected with the disease, and it is difficult to avoid the conclusion that to them the necessity for regular school attendance may be a source of danger.

With these thoughts in mind the Subcommittee put forward propositions, some of which, they gladly acknowledge, have already been advanced by Sir George Newman in his suggested " lines of action by local education authorities," and reproduced in the concluding paragraphs of their first report, Part IV.

Administrative.

No difficulty should be placed in the way of irregularity of attendance on the part of children certified as rheumatic, so that exposure to unsuitable weather may be reduced to a minimum. Similarly, convalescent rheumatic or heart cases should be allowed to attend school for only half-days on production of a suitable medical certificate. Care should be taken to prevent children from sitting in wet clothes or boots while at school, and to see that they do not get wet at school when going to lavatories or play.

The Subcommittee are of opinion that Day Open-air Schools in cities are unsuitable for rheumatic children, and regard swimming as the least satisfactory sport for rheumatic subjects.

Valuable time might be gained if school teachers were taught to suspect an oncoming chorea by the early, often mainly psychological, symptoms of that malady.

Medical.

In the Subcommittee's view the most important work which can be undertaken by the school medical officers in connexion with juvenile rheumatism is the early detection of rheumatic infection and heart disease. To deal with the problem as actively as it deserves, " special " inspections for the detection of cases would need to be undertaken at least twice a year. Further, it must be allowed that unless the co-operation with the parents is sufficiently close to reveal the slighter symptoms of rheumatism, only the cases showing the grosser physical signs will be detected. Much work preliminary to the medical inspection will therefore need to be done by the teachers and school nurses, aided by information sought and obtained from the parents.

For the proper examination of the hearts of children facilities for examining the child when lying down as well as when standing up should be at hand.

There should be co-operation between the school medical officer on the one hand, and hospitals and practitioners on the other. The cases detected at school should be registered and referred to the family practitioner or hospital for

treatment or medical supervision. The school medical officer should receive notice of cases detected elsewhere so that he can register them for special observation.

Every effort should be made to keep the operative technique at the school throat clinics at the highest grade of excellence. It should be recognized that tonsillectomy is often an operation demanding great skill.

The Subcommittee regard the treatment of rheumatic children as outside the scope of the School Medical Service, school clinics, or minor ailment centres. Further, they think that special medical supervision is necessary for these children, and that it should be conducted on the lines suggested in the next section of this Report. This special medical supervision should, in the Subcommittee's opinion, be conducted by the hospitals rather than by the School Medical Service and its clinics. In expressing this opinion the Subcommittee have in mind the second of the principles stated at the beginning of this Report—namely, that such work should be undertaken only by those who have at hand every kind of treatment which the various phases of the disease may demand.

Hospitals.

The hospital is the one organized unit which potentially can provide all the facilities necessary for the treatment and supervision of the rheumatic child in every stage of the disease, but for this ideal to be realized an expansion of the work of the hospital in two directions is necessary—namely, towards stricter supervision of apparently quiescent cases, and further facilities for the prolonged treatment of certain convalescent and chronic cases.

Medical Supervision of Rheumatic Children.

The chief difficulty to be faced is that of the rheumatic child whose rheumatism is apparently quiescent, so that he is not brought to hospital, but whose heart disease is in reality active. To deal with this problem the Subcommittee see no way other than the establishment by hospitals of some system of supervision whereby the hospital sends for its rheumatic patients for the purpose of periodic re-examination, even though to the parent the child appears well. It is realized that the introduction of such a system is to some extent an expansion of the ordinary work of a hospital, but the lack of supervision of this type has proved in this particular disease so great an evil that such a measure must be regarded as a necessity.

The easiest way for a hospital to deal with this matter is by setting up a "*Rheumatism Register*" or bureau kept by the almoner. This method, which is explained more fully in the Appendix (Sec. 13*a*) is, the Subcommittee think, generally sufficient from the patient's point of view. A more elaborate plan—to be preferred where local conditions are favourable—is the establishment of a "*Rheumatism Supervisory Centre*" in the charge of a member of the staff of the hospital (Appendix, Sec. 13*b*). Such a centre would keep in touch with all rheumatic cases referred to it during their periods of apparent quiescence.

The Subcommittee are not in favour of setting up special "*Rheumatism Treatment Clinics*" to which all rheumatic cases would be drafted for treatment. Nor are they in agreement with the suggestion to establish "cardiac clinics" for cases of rheumatic heart disease in children. The ideal is to catch the rheumatic child before he is in any true sense a "cardiac" case, and the Subcommittee regard it as essential that the emphasis should be laid upon the "rheumatism" rather than the "cardiac" aspect of preventive work if the prevention of heart disease is to have any hope of success.

In any scheme of supervision of rheumatic children arrangements should be made for co-operation with practitioners and school medical officers, and for printed instructions on the care of their children to be given to parents. (Appendix, Section 15.)

The Subcommittee venture to express the hope that these proposals may receive the consideration of hospital authorities.

Hospital Accommodation.

The provision of beds for acute rheumatic cases varies with the pressure on the beds of any particular institution. Except, perhaps, where special research work is being undertaken, special beds allocated to rheumatic cases only are seldom practicable and are unnecessary. Any bed available can be put to this use as required.

On the other hand, the provision of beds for cases requiring many months of rest and treatment is beyond the scope of most ordinary voluntary hospitals; nor are these the ideal places for such treatment. This must be undertaken in the Rest Homes as described below, but it is much to be hoped that these will be organized and conducted in such close connexion with the hospitals that their work may be regarded as an expansion of hospital activities.

Practitioners.

As with the hospitals, so with the practitioner, the chief difficulty lies in keeping in touch with rheumatic patients once they are apparently well. For this purpose it will be necessary to make a list of rheumatic cases and obtain from parents permission to send them reminders to bring their children up for re-examination every three months. If the practitioner cannot undertake such work himself, he should recommend the child to the hospital for this purpose.

Rest Homes (Hospital-Schools).

The good effect of prolonged institutional treatment on a certain proportion of cases of rheumatic heart disease in children has long been recognized in this and other countries. In their first report the Subcommittee drew attention to the fact that a rapid expansion of such accommodation is urgently needed, as the demand greatly exceeds the supply. They now propose to suggest the lines upon which, in their view, such accommodation should be provided.

1. It is essential that the rest home should be conducted in as close association with hospitals as possible. It is through the hospitals that most cases will be recommended to the rest home, and it is to the parent hospital that the patient will be referred should any acute rheumatic emergency arise. In large cities the rest home will receive cases from more than one hospital, and it will always be necessary that the rest home should be within comparatively easy reach by motor of its associated hospitals.

2. In order to obtain the smoothest co-operation between hospital and rest home it is essential that members of the honorary hospital staff should act as visiting consultants to the rest home, or at least be members of the managing committees of such homes.

3. Since many of the children who are particularly in need of treatment in rest homes will be inmates of them for many months, it is necessary that education should be provided for them.

4. In order to combine economy with efficiency, it is advisable that the site of the rest home, or school-hospital, be directly continuous with that in which the other crippling diseases of childhood—for example, poliomyelitis and tuberculosis of bones and joints—are treated. The cardio-rheumatic children will then be able to share the services of the administrative and educational staffs provided for the orthopaedic patients. Moreover, it will facilitate the provision of laboratory, x-ray, and other equipment on an economical yet adequate scale. Thirdly, it will offer to both classes of patient the service of the best medical staff available. Fourthly, the training of students in the treatment of chronic disease will be made easier and better.

5. Last, but not least, it has to be remembered that the number of good hospital sites within reasonable reach of most great cities is small. Probably the best policy for the future will be one of concentration. Each city will seek to develop a kind of hospital suburb or colony at the best site available, and it is as a part of this development that we hope to see the hospital-school, or rest-home as we have called it here, which shall provide for the rheumatic child treatment as long as may be necessary in the best possible environment.

It is not expected that there would be great difficulty in collecting money from voluntary sources to get such rest homes started, and grants in aid of upkeep might legitimately be claimed from the public health and education authorities.

The Science Standing Committee of the Royal Institute of British Architects, and later a subcommittee appointed by them, met on two occasions certain members of the Subcommittee. These meetings led to the adoption of the following resolution by the Council of the Institute:

> "The Council of the Royal Institute of British Architects have had their attention called to the Report on Rheumatic Heart Disease in Children by the British Medical Association, and, having regard to the fact that it is in the public interest to eliminate dampness in all dwellings, they note with approval that the Science Standing Committee have appointed a Subcommittee to investigate and report on this subject."

The Subcommittee desire to express their sincere thanks to those gentlemen who gave their time so unsparingly to the discussion of the problem of damp houses, and to assure the Council of the Royal Institute of British Architects that the resolution quoted above is welcomed by the Association.

Owing to his official connexion with the Ministry of Health Dr. J. Alison Glover preferred to remain without a vote on matters of policy and so is not a signatory to this Report. His advice on many matters has been invaluable to the Subcommittee.

Finally the Subcommittee desire to emphasize their debt to their able and energetic Honorary Secretary, Dr. Reginald Miller, for the energy and tact which he has brought to the composition of this Report.

Signed on behalf of the Subcommittee,

HUMPHRY ROLLESTON,
Chairman.

APPENDIX.

NOTES ON THE PREVENTION AND CONTROL OF JUVENILE RHEUMATIC INFECTION

Prepared by REGINALD MILLER, M.D., F.R.C.P. (Hon. Sec.), *and adopted by the Subcommittee.*

§ 1. In approaching the subject of the prevention and control of rheumatic infection in children reference must be made to certain difficulties in connection with the occurrence of the disease on a large scale. The etiological factors of its production fall into three grades which differ in the degree of their influence on the causation of the disease. First, there is the infecting micro-organism itself. Whatever its nature it is important to realise that it is able to produce a disease which is as clearly defined as any in clinical medicine. Secondly, there is the factor of tonsillar infection. Chronic diseased tonsils are found in 75 or 80 per cent. of all rheumatic children who have not undergone tonsillectomy; to these must be added a few whose tonsils have been only temporarily infected during acute rheumatic attacks. Thus the association of tonsillar disease with juvenile rheumatism is a close one. In some instances the tonsillitis is a direct manifestation of rheumatism (rheumatic tonsillitis). In others it is probable that the tonsillar tissues, damaged by chronic non-rheumatic infections, present an avenue through which a systemic rheumatic infection readily occurs. Thirdly, there are the "predisposing" factors including the environmental factors with which the prevention of the disease is specially concerned.

These are not the only difficulties, for in juvenile rheumatism the earliest symptoms are often obscure and insidious, and it cannot be easy to distinguish between influences which tend to originate the disease and those which, by increasing its severity, merely unmask it.

PREVENTION.

§ 2. *Damp Homes.*—The first report (1) laid stress on the association between rheumatic infection in children and damp in their homes. The effect of cold and damp on the incidence of the disease is so strongly evidenced by the world distribution of acute rheumatism and its seasonal incidence in England that it cannot be set aside. Further, the peculiar class-incidence of juvenile rheumatism in England affecting the poor, but not the poorest, shows that some factor other than mere poverty is at work.

In view of the importance of this subject some further evidence, published since the appearance of the first report, is summarised here.

(a) The special investigations made for the previous report (1) (v. Part I.), in West London, Bristol and Bath, showed that nearly two-thirds (62·2 per cent.) of rheumatic children were, when first attacked by rheumatic infection, living in damp homes. These figures were thought to represent a minimum proportion, included in the series were several cases of frank scarlatinal origin.

(b) The previous report, which investigated (page the distribution of damp and of rheumatism in the vario stories of the West London houses, showed that t middle floors of the houses were the driest and that t same floors provided the fewest cases of rheumatism.

(c) A. P. Thomson (2), working in Birmingham, fou that the homes of rheumatic children showed obvio signs of damp in 45 per cent. of cases: if the eviden of the inhabitants was accepted the proportion was rais to 52 per cent.

(d) A. P. Thomson (2) has constructed a spot-map Birmingham showing the distribution of some 400 cas He found that the rheumatic areas did not correspo accurately with the areas of poverty. Of the latter the are several, but the bulk of the juvenile rheumatis occurred in only two of them, and through both of the areas ran streams, one of which was subject to period overflowing.

(e) R. H. Vercoe (3) found in Chelmsford that t proportion of damp homes was twice as great in a seri of rheumatic children as in non-rheumatic children. H percentage (only 26 per cent.) of damp houses was ve much lower than the above figures: a different standa of "damp" was used.

(f) F. C. Shrubsall (4) has constructed a map of Lond showing the distribution of 1,000 cases of acquired hea disease attending the L.C.C. Special (P.D.) Schools December, 1925. In it the influence of the Thames a its tributaries are well seen. This work is an interesti confirmation of the results obtained by Dr. Jane F. Shrubsall, who deserves credit for being a pioneer investigations along these lines in 1912-15. A sho account of her work is given by F. C. Shrubsall (5, "The only common facts seemed to be the presence old river valleys and other water courses (in London) . . The author did not regard it as proven that this associ tion was a direct one between rheumatism and dampne since there is some difficulty in excluding the seconda relation between dampness and social surroundings in t widest sense." It is unfortunate that Dr. Jane Shrubsall thesis (Jane Gilmour (6), 1915) was unpublished; n only because of its intrinsic value, but because it mig serve as a pattern for similar investigations in tow smaller than London, a research which is much neede

This evidence points to an association between damp a juvenile rheumatism, but how close this association may is not yet settled. Several of the facts recorded above sugge that the association is close and direct, but it may be th it is only an indirect one, acting through the productio of chronic tonsillar infection by predisposing to repeat catarrhs. Probably in England damp is both a direct a an indirect cause of the disease.

If, then, it be accepted that damp in houses is an importa factor in the mass-production of juvenile rheumatism in th country, it is not easy to regard with satisfaction the prese state of housing here: for there is little doubt that, tak as a whole, the houses of the urban poor are conspicuous damp. Whether legislative or administrative measures c ever ensure dry homes in England is open to discussion, b certain it is that the problem has not yet been solved. W may well press for some assurance that even in the prese time of house-shortage and excessive building costs, ne houses shall keep drier than existing ones.

§ 3. *Test for Damp.*—There does not appear to be a simple and generally accepted test for damp in houses. reliance is placed only on the inspection of walls, roofs a floors, damp due to faulty ventilation may be overlooke A better test, therefore, appears to be one including examination in the house of the condition of articles whi easily absorb moisture, due allowance being made for te porary causes of damp, such as laundering, cooking, etc. T results published in Report I were obtained on these lines was there explained.

§ 4. *Incidence in School Children.*—The influence of t years of school attendance on the production of juveni rheumatism appears to be governed by three facts which we demonstrated in Part I. of the first report.

(a) Rheumatic infection is common among the childr of the Public Elementary Schools and rare in the publ or private schools of the richer classes.

(b) Many elementary school children who have enter upon school life with normal hearts pass out of scho with rheumatic heart disease.

(c) Such heart disease is about three times as comm in the elementary schools of industrial towns as in tho of rural areas.

These facts suggest that the environment of the elementary school child in industrial areas is probably favourable to the incidence of rheumatism, and certainly favourable to the incidence of heart disease.

§ 5. *Instruction to Parents.*—As rheumatism often attacks more than one member of a family, instruction given to the parents of any child diagnosed as rheumatic should, as C. O. Hawthorne (7) has emphasised, be a valuable means of preventing further cases.

§ 6. *Early Tonsillectomy.*—As it is so often the child with chronic infected tonsils who acquires rheumatism it would seem that the early removal of such would tend to prevent the development of this infection.

Early Detection.

§ 7. The detection of rheumatic infection must necessarily remain in the hands of the school medical officers, general practitioners and the hospitals. In the early detection of the disease, before any obvious condition of invalidism is reached, the School Medical Service is in the best position for giving valuable assistance.

Instruction to parents, school teachers and nurses should greatly help towards the earlier recognition of the minor manifestations of rheumatic infection in children.

Notification.

§ 8. *Compulsory Notification.*—Legally, the only sort of disease which can be made compulsorily notifiable is an infection, endemic or epidemic. As will be seen in the following extract from regulations recently issued by the Minister of Health (8) only cases of rheumatic infection showing infective activity can be made notifiable:—

> In "The Paddington (Acute Rheumatism) Regulations, 1927," the title given to the disease is that of "Acute Rheumatism," and it is defined as follows:—"The expression 'acute rheumatism' means the following conditions occurring separately or together in a child under the age of 16 years:—
>
> (1) rheumatic pains or arthritis, if accompanied by a rise of temperature;
>
> (2) rheumatic chorea;
>
> (3) rheumatic carditis."

§ 9. *Voluntary Notification.*—It is thus seen that if an accurate estimate of the prevalence of rheumatic heart disease is wanted, reliance will have to be placed on a system of voluntary notification. By this means, only such cases of rheumatic infection as show heart disease can be collected, and such could be notified both in quiescent as well as active stages.

Dr. Carey Coombs has suggested the following formula for the voluntary notification of rheumatic heart disease.—

> (1) Heart disease arising in connection with acute or subacute rheumatism or chorea; and
>
> (2) heart disease displaying the signs commonly found in early rheumatic heart disease; *i.e.*,
>
> (a) ventricular enlargement with mitral regurgitation, to which may be added the signs of
>
> (b) aortic regurgitation,
>
> (c) acute pericarditis.

Treatment in Acute Stages.

§ 10. The Voluntary Hospitals in general, and the Children's Hospitals in particular, make every effort to provide in-patient treatment for patients with active rheumatic symptoms, and their needs are fairly well met. Where enough accommodation is wanting it is usually a matter of either particularly heavy incidence or a general shortage of hospital beds for the district. Long-lasting cases of chorea, however, do put a severe strain on hospitals; and the provision of prolonged institutional treatment for convalescent heart cases is quite beyond the present capacity of any hospital in a busy area. This matter is dealt with later. (§ 13.)

Tonsillectomy.

§ 11. In Part III. of the first report evidence was brought forward to show that the acute rheumatism seen in tonsillectomized children tended to be much reduced in severity by the previous operation, if complete. In particular the heart was notably spared.

Two recent expressions of opinion may be noted:—

> A. P. Thomson (2) reports that he finds that previous tonsillectomy diminishes the tendency to pyrexial attacks during treatment and that it protects "rheumatic children from permanent heart disease."
>
> O. Holsti (9) observes no harmful effect from tonsillectomy in rheumatic cases (his series contains adults as well as children). He finds that the operation gives some protection against rheumatic arthritis.

Medical Supervision of Rheumatic Children.

§ 12. To attempt to deal with rheumatic children merely by treating them in the acute phases of their disease is not a success: something more in the way of prolonged medical supervision is necessary. For this there are several reasons. For one thing it is a cardinal feature of juvenile rheumatism to show a tendency to repeated relapses, and no one can say in which cases relapses will occur, nor when, nor with what severity. Perhaps a greater difficulty arises in connection with cases in which the infection goes smouldering on, so that disaster overtakes the heart without the child's having been to a doctor at any time. Thus, medical supervision appears a necessity. Fortunately there are good grounds for hoping that it would be beneficial: acute attacks seldom develop without warning signals which a doctor can detect, and many cases of smouldering carditis can be diagnosed by careful medical examination.

The features, then, of the medical supervision of rheumatic children should include (a) registration for (b) periodic re-examination; (c) co-operation with the school medical service, where similar registers should be kept, and (d) instruction to parents. (e) The question who should properly undertake the medical supervision of these children raises a delicate but most important point of principle, namely, that as juvenile rheumatism is so dangerous and uncertain a disease, it is only fair to the children that their supervision should be undertaken by those who are prepared to deal with every type of rheumatic emergency which may arise. Thus, for the work to be properly and safely done, there must be provision for immediate bed treatment for some cases, for others out-patient treatment or expert throat surgery. Further, facilities for re-examination at least every three months, and in cases nearer the danger line, every month, or even oftener, must be provided.

With these points in view, it seems that such supervision can be carried out better by hospitals and practitioners than by special clinics or centres separated from, and without the facilities of, the hospitals.

§ 13. *Supervision by Hospitals.*—There are various ways in which hospitals could carry out the medical supervision of rheumatic children.

(*a*) *Rheumatism Register* ("*Bureau*").—The method which disturbs hospital routine least is to establish a register of all rheumatic patients attending the in- or out-patient departments of the hospital. This could be kept by the Almoner's office, by which reminders could be sent to the children's parents that they should attend for re-examination. The child would then be seen by the physician who had previously treated it. The register should be correlated with a similar register kept by the school authorities, the hospital and the school notifying each other of cases discovered. Printed instructions on the care of their children should be given to the parents.

(*b*) *Rheumatism Supervisory Centre.*—This more elaborate plan has certain advantages. It permits of closer investigation into the local distribution of the disease; by having one person in charge, it tends towards more efficient co-operation with practitioners and schools; and it relieves out-patient departments of the necessary "inspection" work.

The physician in charge of the Centre should be appointed by the hospital authorities and the Centre become part of the activities of the hospital. The work of the Centre is to supervise the children during the apparently quiescent stages of their rheumatism, while treatment during all active phases remains in the hands of the practitioner or the various physicians of the hospital. Thus, the Centre can admit to the medical beds, can refer cases for treatment to the medical or special out-patient departments, or to the practitioner who attends the child when it is ill. The Centre itself gives no direct treatment save such emergency treatment as may be necessary to tide over the time before regular treatment is re-established.

The "Parents' Paper" in use at the Rheumatism Supervisory Centre at the Paddington Green Children's Hospital, is printed below. It shows the method adopted to ensure that the Centre acts in co-operation with practitioners and the physicians of the hospital.

Although the Centre does not directly treat the patient, except in emergencies, it has immediately at hand every form of treatment which the rheumatic subject may require in any emergency.

(*c*) *Rheumatism Treatment Clinic.*—A further possible plan may be mentioned, namely, the establishment by the hospital

of a Clinic to which all rheumatic children should be drafted and where they should not only be supervised but actually treated.

§ 14. *Supervision by General Practitioners.*—The practitioner's chief difficulty in this matter lies in the fact that poor people are willing to pay for treatment during illness but are not educated up to spending money on having children inspected while apparently well. Where the parents' means permit, the practitioner is able to provide for every sort of treatment in the same way as a hospital, and the above remarks may be adapted to his use. Otherwise the patient can be transferred for supervision to a hospital centre where the parents should be instructed to seek advice from their own doctor should the child fall ill (*v. infra*: Parents' Paper).

INSTRUCTIONS TO PARENTS.

§ 15. It has already been mentioned that instruction to parents may help to prevent further cases of rheumatic infection in a rheumatic family (7). Certainly such instructions on the care of their children should be part of the work of any supervisory scheme.

The instructions published by F. J. Poynton (10) and already in considerable use form an admirable basis for the printed instructions which should be distributed to parents.

The instructions to parents distributed at the Rheumatism Supervisory Centre of Paddington Green Children's Hospital, are given at the end of this Appendix.

OPEN AIR TREATMENT.

§ 16. Open air treatment has been advocated for rheumatic subjects under two headings:—(a) the value of Open Air Day Schools for such children, and (b) the value of a modified open air régime in the rest homes for rheumatic convalescents.

(*a*) *Day Open Air Schools.*—The following passage may be quoted from the Annual Report of the Chief Medical Officer of the Board of Education for the year 1925 (11):—

> During 1925, enquiries were addressed to 30 school medical officers concerning the response and progress of cases of rheumatism, carditis and chorea, admitted to Day Open Air Schools in their respective areas. Medical experience seems to indicate that cases of rheumatism which are subject to relapse, of severe carditis following an acute attack, or of severe chorea, are not suitable for admission to a Day Open Air School. The more rigorous conditions of cold and wet to which children attending a Day Open Air School may be subjected are a source of risk in favouring a relapse of the disease. On the other hand, mild cases of chorea, cases of slight rheumatic carditis in which the active disease is quiescent, or well. Practice should be modified by consideration of the climatic conditions of the area.

In connection with this opinion arise the questions of the difficulty in regarding any case of rheumatic infection in a child as mild, and the uncertainty in predicting whether such a case will show relapses or not.

(*b*) *Open Air Convalescent Treatment.*—Many have advocated the value of open air treatment for convalescent or chronic rheumatic states in children. It must, however, be remembered that the connection between over-exposure to cold or epidemic catarrhs and renewal of the activity of the disease is much closer in rheumatic than in tuberculous infection, especially surgical tuberculosis, and a considerable modification of the open air régime for the benefit of the rheumatic cases is probably necessary.

REST HOMES (Hospital-Schools).

§ 17. There has been very general acceptance of the view that there is a need of special accommodation for convalescent rheumatic children in homes where they may enjoy the advantage of healthy environment, modified rest, and education. Such accommodation has been provided in America and in this country and, as was emphasised in the first report, there is need for "a rapid expansion of the accommodation for prolonged institutional care of rheumatic children."

This subject has been considered by W. T. Gordon Pugh in his two reports to the Metropolitan Asylums Board (12), and has recently been discussed at Bristol at a meeting opened by J. A. Nixon (13).

Instructions to Parents Distributed at the Rheumatism Supervisory Centre, Paddington Green Children's Hospital.

Parents' Paper.

PADDINGTON GREEN CHILDREN'S HOSPITAL.

(Incorporated.)

RHEUMATISM SUPERVISORY CENTRE.

(FOR RHEUMATISM, ST. VITUS'S DANCE, AND RHEUMATIC HEART DISEASE.)

The Centre is open every Saturday. Admission (free) 1 to 2 o'clock p.m.

The object of the Centre is to keep a watch over your child, so as to prevent it from getting a fresh attack of rheumatism, or developing heart disease, without your knowing that anything is wrong.

The chief danger of rheumatism in children is heart disease, and this may develop so quietly that it can only be detected by a doctor's examination. The Centre offers you the opportunity of having your child's heart examined periodically with a view to preventing its becoming affected.

The Centre is not a treatment clinic, and will not interfere in any way with the treatment from the hospital or private doctor who usually looks after your child. It is intended to help you to take the best care of your child while it is apparently well, and to warn you as early as possible of any symptoms requiring medical attention.

A card will be sent to you to remind you when your next visit is due; but if you are in any doubt or difficulty about your child, you can bring it to the Centre on ANY Saturday.

If the child becomes ill, do not wait for the Centre to be open, but obtain advice at once from:

(Name of Practitioner or Hospital Physician).....

(Address).....

YOU SHOULD READ THE SUGGESTIONS OVERLEAF.

(Reverse.)

ON THE CARE OF RHEUMATIC CHILDREN.

1. Rheumatism is caused by infection by a germ, and it is a common disease of children, in whom it often attacks the heart. This is the great danger of the disease. Rheumatism is the commonest cause of heart disease in children.

2. Rheumatic attacks of all sorts often start with a sore throat. A sore throat in a rheumatic child is always a dangerous symptom.

3. Common symptoms of rheumatism in children are:

Sore throat.	Paleness.
Pains in muscles.	Shortness of breath.
Painful joints.	Fidgetiness or nervousness.

4. Chorea, or St. Vitus's dance, is rheumatism attacking the brain. Its chief danger is the tendency for the heart to be injured at the same time. Unusual nervousness, disturbed sleep, fidgety movements, or a tendency to drop things, may be warnings of St. Vitus's dance.

5. Rheumatic heart disease is often painless and may only be discoverable by a doctor's examination.

6. If the heart has been injured by rheumatism, its recovery is very slow, and permanent harm may be done by letting the child resume an ordinary life before recovery is satisfactory.

7. An occupation in life for a child with heart disease requires very careful choice.

8. Rest is very necessary for rheumatic children. They should always be put to bed early, and they should be made to lie down during the day if they seem at all tired or if there is any aching of the limbs.

9. Damp is bad for rheumatism; basements are dangerous. Rheumatic children should sleep in the sunniest and driest room available. If they get wet, their clothes should be taken off and dried at once. Water-tight boots are especially important.

10. Rheumatism tends to recur, especially in the winter months.

British Medical Association.

CURRENT NOTES.

Lunacy Law Reform.

It will be remembered that when the Royal Commission on Lunacy was set up in July, 1924, the British Medical Association appointed a special committee to prepare evidence for submission on behalf of the Association to the Royal Commission. In view of the publication of the Commission's Report in July last, and the possibility of legislation to give effect to its recommendations, the committee was reappointed to make a detailed examination of the Report and prepare to scrutinize the Government measure on its appearance. The reconstituted committee has held two meetings—on March 17th and 28th. While the Report of the Royal Commission shows the careful attention given to the views expressed by the Association's witnesses, in many cases endorsing them, the recommendations directed to the better protection of medical practitioners in their duty of certification of the insane fall far short of the policy put forward by the Association. The claim of the Association on behalf of practitioners signing certificates under the Lunacy Act was for the immunities granted to witnesses in courts of law. The Royal Commission, on the other hand, after consideration of the admitted difficulties of the present position, merely recommends "that, for the more effective protection of medical men and others in the bona-fide discharge of their duties under the Act, Section 3 (30) should be so amended as to provide that any such person shall not be liable to civil or criminal proceedings unless he has acted with bad faith or without reasonable care," and that subject to this qualification "any proceedings taken against such person shall be stayed upon a summary application to the High Court or a judge in chambers." This recommendation would shift the onus of proof as to good faith and reasonable care from the practitioner, with whom it lies at present, to those who seek to impugn his conduct. It is hard to believe that its adoption would supply an adequate safeguard. So far this is the chief point of difficulty encountered by the committee in its review of the Report.

Election of Representative Body.

The Council has grouped the Divisions for election of the Representative Body, 1927-8, in the manner shown in the next column. It is a matter for the Executive Committee of the Division (or, where the Constituency comprises more than one Division, for a joint meeting of the Executives of the Divisions) to decide whether the Representative(s) and Deputy Representatives shall be elected by a *general meeting* of the Constituency or by *postal vote*. The meeting must be called (or, where the election is by voting papers, these must be issued) by the Secretary of the Division (or, in the case of Constituencies comprising more Divisions than one, by the Secretary of the Division containing the largest number of members). The Representatives and Deputy Representatives must be elected not later than Saturday, May 14th, and their names forwarded to the Head Office not later than Thursday, June 2nd.

Edinburgh Annual Meeting: Reduced Railway Fares.

We have already announced that the usual concession to members of the British Medical Association in regard to railway fares will apply to the Annual Meeting in Edinburgh this summer. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue passenger tickets to Edinburgh, available from July 13th to 25th, at the ordinary single fare and one-third for the double journey, with a minimum adult fare of 1s. A printed voucher filled in by the applicant and signed by the Financial Secretary of the Association, must be given up at the booking office when the ticket is bought. These vouchers will be obtainable in due course from the Finance Department, British Medical Association, Tavistock Square, W.C.1.

The Financial Secretary has now heard from the Railway Clearing House, informing him that the cheap fare concession referred to above will, in addition to applying from stations in Great Britain, also operate from the Irish ports by railway-owned steamers, and by the boats of the Belfast Steamship, British and Irish Steam Packet, and the City of Cork Steam Packet Companies, and of Messrs. Burns and Laird, Ltd.

Association Notices.

TABLE OF DATES.

April 23, Sat.	Annual Report of Council appears in SUPPLEMENT.
	Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members, for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 7, Sat.	Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.
May 10, Tues.	Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
May 14, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
	Publication in SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
	Last date for election of Representatives and Deputy
May 28, Sat.	of results of election of members Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members.
	Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m.
	Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh).
	A.R.M. (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh).
	Meetings of Sections, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc, Edinburgh.

ALFRED COX, *Medical Secretary.*

(II) CONSTITUENCIES OUTSIDE THE BRITISH ISLES.

The Council has made each Division and Division-Branch outside the British Isles an independent Constituency, entitled to elect one Representative and one or more Deputy Representatives (By-laws 40, 41, and 43).

BRANCH AND DIVISION MEETINGS TO BE HELD.

ABERDEEN BRANCH: ABERDEEN DIVISION.—A meeting of the Aberdeen Division will be held in the Physiology Classroom, Marischal College, on Thursday, April 21st, at 3.30 p.m. A British Medical Association Lecture will be given by Professor John Fraser, *M.C.*, F.R.C.S. (Edinburgh), on "Treatment of burns in children." All medical men in the district are cordially invited.

BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.—The next meeting of the Dumfries and Galloway Division will be held at the Royal Infirmary, Dumfries, on Thursday, April 21st, at 3 p.m., when Dr. J. Stanley White will deliver an address, illustrated with lantern slides, on "Some recent aspects of gland therapy."

METROPOLITAN COUNTIES BRANCH: HARROW DIVISION.—A meeting of the Harrow Division will be held at the Gayton Rooms, Harrow, on Tuesday, April 19th, at 8.30 p.m. It is hoped to hold a clinical evening, and each member who has a suitable case (or cases) is asked to make an effort to bring it. The annual dinner and election of officers will probably take place on the fourth Tuesday in May. Ordinary meetings will be held on June 28th, October 25th, November 22nd, and December 27th, and members are requested to book these dates.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—A meeting of the Willesden Division will be held at St. Andrew's Church Hall, High Road, Willesden Green, on Wednesday, April 27th, at 9 p.m. Agenda: Minutes, correspondence, etc.; consider Annual Report of Council (to appear in BRITISH MEDICAL JOURNAL SUPPLEMENT, April 23rd); any other business.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, April 29th, at 8.15 p.m. Dr. L. G. Parsons, physician to Queen's Hospital and the Children's Hospital, Birmingham, will give an address on "Some points in the diagnosis and treatment of pneumococcal infections in children." Tea and coffee will be served at 8 p.m.

NORFOLK BRANCH: NORWICH DIVISION.—A general meeting of the Norwich Division will be held in the Medical Library on Friday, April 22nd, at 9 p.m. Agenda: Election of representatives to Annual Representative Meeting at Edinburgh in July, 1927.

NORTH WALES BRANCH.—The spring meeting of the North Wales Branch will be held on Tuesday, April 19th, at Pwllheli. Members wishing to read papers or show cases should communicate with Dr. E. Lewys-Lloyd, Branch secretary (Rhianfa, Towyn, Merioneth).

NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.—It is proposed to hold an annual dinner of the Bishop Auckland Division on Friday, April 29th, at 7.30 for 8 p.m., in the King's Café, Newgate Street, Bishop Auckland. Tickets £1 1s. each (inclusive of wines). Guests may be invited. The dinner will only be held provided a sufficient number of members inform Dr. P. V. Anderson (Enfield Lodge, Shildon, co. Durham) by to-day (Friday, April 15th) that they intend to be present.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.—A meeting of the Blyth Division will be held in the Knight Memorial Hospital, Blyth, on Wednesday, April 20th, at 8.15 p.m., when Mr. Arkle (Newcastle-on-Tyne) will lecture on "Eye conditions of interest to colliery practitioners." Members of the Morpeth Division are invited.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, April 20th, at 8.15 p.m. Dr. E. Farquhar Murray will give an address on "Some modern aspects of midwifery and gynaecology." All members of the Division are invited to be present

OXFORD AND READING BRANCH: OXFORD DIVISION.—A clinical meeting of the Oxford Division will, by invitation of the local practitioners, be held at the Horton Infirmary, Banbury, on Friday, April 22nd, at 3 p.m. Professor G. E. Gask, C.M.G., D.S.O., director of Surgical Unit, St. Bartholomew's Hospital, will read a paper on "Some operations for gastric ulcer," illustrated by lantern slides. Clinical cases will be shown by members of the honorary staff of the Horton Infirmary and others. On Thursday, April 28th, the South-West Division of the Royal Medico-Psychological Society is meeting at the Mental Hospital, Littlemore. Cases will be shown from 2.30 to 4 p.m. Those members of the Division who intend to be present and to take tea are asked to notify Dr. Good.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.—A clinical meeting of the Portsmouth Division will be held on Thursday, April 28th, at 3 p.m., at the Royal Portsmouth Hospital (Out-patient Department). 3 p.m., Examination of cases; 3.45 p.m., tea, provided by the staff of the hospital; 4 p.m., discussion of cases in Board Room. The meeting will end promptly at 5 p.m. Members are requested to show cases of general interest—concise notes of these should reach Mr. A. Scott Ridout (clinical secretary), 37A, Clarendon Road, Southsea, not later than Monday, April 18th, so as to appear on the agenda paper.

SUFFOLK BRANCH: WEST SUFFOLK DIVISION.—A clinical meeting of the West Suffolk Division will be held at the Angel Hotel, Bury St. Edmunds, on Saturday, April 23rd, at 8 p.m. Sir Thomas Horder, Bt., K.C.V.O., physician to St. Bartholomew's Hospital, has kindly promised to open an informal discussion on "What are the most useful methods of supplementing clinical diagnosis?" Arrangements have been made for members attending the meeting to dine together, and Sir Thomas Horder's paper will be read after dinner. Dinner (at 8 p.m.), price 5s. Morning dress. Members are invited to bring guests, and are requested to notify Dr. B. E. A. Batt (6, Angel Hill, Bury St. Edmunds) by Monday next, April 18th, whether they propose to attend, and the names of any guests.

SURREY BRANCH: GUILDFORD DIVISION.—At a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, to be held on May 19th, Professor Hobday will open a discussion on clean milk. Further particulars will be announced later.

SUSSEX BRANCH: BRIGHTON DIVISION.—A clinical meeting of the Brighton Division will be held at the Lady Chichester Hospital on Thursday, April 21st, at 3.45 p.m.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The spring meeting of the Worcestershire and Herefordshire Branch will be held at the Hospital, Hereford, on Wednesday, April 20th, at 3.15 p.m. Agenda: To arrange time and place of annual meeting. Mr. Duggan (Worcester) will read a short paper, "A case of splenic anæmia treated by splenectomy"; Dr. Clarke (Weobley) notes of an outbreak of epidemic jaundice; Dr. Smyth (Malvern) notes of a case described as "Two dreams"; Mr. Cavenagh (Worcester) notes on two cases of foreign body in the œsophagus and two interesting cases of ear trouble. 4.30 p.m., Tea. 5 p.m., Notes of cases and pathological specimens will be read and shown by Mr. Devereux (Malvern), Mr. Ainslie (Hereford), Mr. Wood Power (Hereford), Dr. Tullis (Hereford), Mr. Purdy (Hereford), Mr. Butler (Hereford); microscope slides by Dr. Smith of the County Asylum, Herefordshire. 6.30 p.m., The President hopes that as many of the members as can will dine with him at the Booth Hall, Hereford (morning dress). Members wishing to avail themselves of this invitation are asked to advise Dr. W. B. Butler, honorary secretary, on or before Monday, April 18th.

YORKSHIRE BRANCH: HARROGATE DIVISION.—The annual meeting of the Harrogate Division will be held at the Imperial Café, Harrogate, on Wednesday, May 4th, at 8.30 p.m. Agenda: (1) Arrangements for meeting of Yorkshire Branch to be held in Harrogate on June 11th; (2) Annual Report of Council; (3) steps taken against activities of antivivisection societies; (4) B.M.A. Charities scheme; (5) annual report and financial statement; (6) election of officers.

Meetings of Branches and Divisions.

BOMBAY BRANCH.

THE third ordinary general meeting of the session was held at the Pathological Laboratory of the Grant Medical College, Bombay, on January 28th, when the President, Dr. R. Row, was in the chair.

Twenty-two members were declared duly elected, the total strength of the Branch being 220, a larger total than in any of the preceding years.

Colonel F. P. Mackie, I.M.S., Dr. N. H. Choksy, C.I.E., Dr. K. G. Mhaskar, and Dr. R. B. Bilimoria were appointed a subcommittee to report on the Medical Secretary's letter dated January 6th, 1927, regarding the new issue of the *British Pharmacopœia* and on the inclusion of substances or preparations used in tropical climates in the body or otherwise of the *British Pharmacopœia*. The subcommittee agreed in main to the evidence given by the representatives of the British Medical Association, and observed that, if need be, a committee of experts should be appointed by the Government of India as regards useful Indian drugs, and that the same be embodied in a separate volume.

Dr. GHARPURE read a paper on "Incidence of primary carcinoma of the gastro-intestinal tract as inferred from the *post-mortem* records of fifty years at the Jamsetjee Jeejeebhoy Hospital." He said the total number of *post-mortem* examinations from 1877 to 1926 was more than six thousand, and in these there occurred two cases of primary carcinoma of the liver, thirteen of the stomach, six of the pancreas, and two of the gall bladder. He showed two interesting pathological specimens: (1) a dissecting aneurysm of the aorta extending from the orifice to its bifurcation; (2) a ganglion neuroma of the thorax.

The PRESIDENT gave "Further observations on the effects of Row's tubercle autolysate in leprosy," illustrating it by projecting pictures of cases of leprosy much improved under the treatment. After a brief reference to the history of some of the aspects which led the author to the study of tubercle bacillary autolysate in tuberculosis and its extension to cases of leprosy, Dr. Row gave a short résumé of the report he had made to the thirteenth Indian Science Congress in 1926 on the value of this vaccine in leprosy. Since that date he had been able to gather together the observations in a further series of cases the analysis of which he ventured to lay before the meeting. These he proposed to divide into two classes: (*a*) The asylum cases from the Ackworth Leper Asylum, Bombay, whose history ranged from three to fifteen years, with extensive atrophic ulceration and frightful facial and other disfiguration—cases which, in the opinion of the superintendent of the asylum, Dr. Rodrique, were beyond human redemption. (*b*) Some private cases in a better social condition and with a shorter history (three years or less) with pronounced lesions. The photographs of all these were thrown on the screen to show the condition before and after treatment, ranging from six to ten months. The alterations in the features and lesions were left to the members to judge for themselves. The most noteworthy features were (1) shrinkage and partial cicatrization of the nodules; (2) return of sensation in anæsthetic patches; (3) the raised age of the patches (erythematous) becoming flush with the skin, leaving only a depigmented patch; (4) return to normal of the leonine features by shrinkage of diffuse nodules; (5) ulceration and cicatrization of the more chronic and fibrosed granulomata, but a very slow reduction of the pearl-white nodules; (6) rapid healing of trophic ulcers. These observations, he said, included the results of the independent observations and investigations carried out clinically by Major Kamat, I.M.S., of Ratnagiri, whose report will be presented by him independently to the fourteenth Indian Science Congress of 1927.

In the subsequent discussion Dr. N. H. CHOKSY and Dr. R. B. BILIMORIA took part. Dr. Bilimoria said he was using two varieties of tuberculin, one containing the fatty envelope or lipoidal substance, and the other obtained from the body of the bacillus in different types of cases; he had only treated one case of leprosy, and that, too, not completely. To this Dr. Row replied that he had tried the lipoidal material long ago, but had abandoned its use as it did not give so satisfactory results as the autolysate.

A clinical meeting of the Branch was held at the Jamsetjee Jeejeebhoy Hospital staff-room on March 4th, when, besides the President and members, the senior students and staff of the hospital were invited as guests by the President; an overflow meeting resulted.

Dr. B. B. YODH showed an interesting case of syphilis of the lung in a man of about 45 and cured by specific treatment. Skiagrams taken before and after the treatment were shown. He also showed a case of carcinoma of the stomach, in a man aged 40, in the primary stage. A beautiful skiagram showed the lumen of the pyloric canal constricted by the malignant mass. Dr. A. K. CONTRACTOR showed five cases, including one of an old man with carcinoma of the stomach in the secondary stage. A big gland at the root of the neck on the left side proved secondary metastasis. He demonstrated a case of wrist-drop of the left hand, involving the musculo-spiral nerve in an alcoholic subject. The third case was of dysphagia due to paralysis of the basal ganglia after an attack of hemiplegia with a peculiar happy look and slow speech, in a man aged about 45. Two more cases of myelitis were also shown by him.

Dr. DERUV showed a case of successful removal of fibro-adenoma of the left parotid without injury to the facial nerve, and another case of fracture of the zygoma and left maxillary bone in a young woman battered by her husband. Dr. K. A. TURNER related his experience in treating soft sores with methylene blue and carbol fuchsin solutions in proportion of two to one. The results were good, healing taking place in about ten days, and more satisfactorily than by the time-worn and objectionable iodoform treatment.

Lastly, Dr. F. D. BANA gave a brief account of the electrophonoid method of treating the deaf.

Dr. Row, the chairman, thanked, on behalf of the Branch, all those who had taken the trouble to bring the cases and clinical material for the interesting discussions they had had that evening.

BORDER COUNTIES BRANCH.

A GENERAL meeting of the Border Counties Branch was held at the Dumfries and Galloway Royal Infirmary on March 24th, with the President, Dr. P. MURRAY KERR, in the chair.

Major W. L. FORSYTH, I.M.S.(ret.), gave an interesting demonstration of laboratory methods, and answered various questions. Dr. P. M. KERR introduced a discussion on "Some common gastric disorders," and Dr. J. D. ROBSON showed *x*-ray plates of the cases described; Dr. R. M. GLOVER spoke from the point of view of the surgeon, and was followed by Drs. CONNELL, LAIDLAW, LIVINGSTONE, EASTERBROOK, and STEVEN.

After tea, at the invitation of the President, Dr. J. RITCHIE, M.O.H., gave a most interesting paper on "Bread." After a general discussion the meeting ended with votes of thanks to the President for his hospitality, and to those who had read papers.

HONG-KONG AND CHINA BRANCH.

Annual Dinner.

AT the annual dinner of the Hong-Kong and China Branch on February 16th Sir Cecil Clementi, K.C.M.G., Governor of Hong-Kong, was the guest of honour.

The president of the Branch, Colonel BOYLAN SMITH, D.S.O., R.A.M.C., in proposing the Governor's health, described certain difficulties and deficiencies in connexion with the general health of the colony. He pleaded for the establishment of a statistical bureau in order that more accurate information might be available with regard to public health matters. He urged that malarial fever should be a notifiable disease, and thought the appointment of a malariologist was essential if an attempt was to be made to eradicate malarial fever from the island. With the provision of a more adequate intelligence department the whole health of the colony would be improved.

The GOVERNOR respo[illegible], and referred at considerable length to [illegible] of such requirements. He said that [illegible] inhabitants was situated on the sea coast of the large province of Kwangtung, with thirty-seven million inhabitants under the rule of Canton, where problems of sanitation and of public health received only the most perfunctory attention. The daily ebb and flow of many thousand Chinese between Hong-Kong and Canton rendered strict quarantine measures impossible, and, therefore, the health of the colony must remain precarious until the province of Kwangtung was submitted to sanitary reform. Health statistics in Hong-Kong were vitiated by the strong preference of Chinese women to return to their native villages on the mainland for childbirth, and the mortality figures were similarly affected by the strong desire of the aged and infirm to go back to their ancestral homes to die. A very large portion of the Chinese population of Hong-Kong was not attended in sickness by any medical practitioner, and many Chinese patients were only admitted to hospital when dying, which rendered the colony's vital statistics extremely misleading. The Governor thought that the reconstructed Victoria Hospital

and the new hospital in Kowloon were model institutions. The Government Civil Hospital was now out of date, and it was proposed to rebuild it on modern lines and on a larger scale as soon as funds were available. Special attention was being paid to the health of the children, a school medical officer having been appointed in 1925 and definite records being kept. The great problem of tuberculosis was intimately connected with the very difficult hospital problem. In conclusion, the Governor referred appreciatively to the work of the British Medical Association in instructing the public in health matters.

Midland Branch: Kesteven Division.

A MEETING of the Kesteven Division was held at the Abbey House, Castlegate, Grantham, on April 5th. The non-members' analysis was considered. The secretary was instructed to write to the two local members of Parliament explaining the attitude of the profession regarding the Dogs' Protection Bill, and asking them to vote against it. It was resolved to send to all members a copy of the Association's letter regarding B.M.A. Charities.

North of England Branch: Blyth Division.

THE Blyth Division held a very successful dinner on March 31st, when Dr. A. FAIRLIE, chairman of the Division, presided, the chief guest being the Medical Secretary. Several members of the Morpeth Division were present.

The CHAIRMAN proposed the health of the British Medical Association, coupled with the name of the Medical Secretary. Dr. ALFRED COX, replying, dealt with the recent attack on the profession in regard to the increase of certification under the National Health Insurance Act, and urged his hearers to regard this matter very seriously. The reputation of medical practitioners could not be more easily damaged than by having doubts cast upon their deliberately written statements about patients. He also emphasized the importance of the work of the Division. In no areas were active Divisions so essential as in small ones, where local jealousies were likely to prevail more than in the larger areas, particularly when these were industrial ones where complications in connexion with associations of workmen might happen at any time. A Division could not suddenly be resuscitated in time of trouble—it must be kept always in working order.

A vote of thanks was moved by Dr. JAMES ANDERSON, who recalled the days when Dr. Cox was active in the area of the Branch and won his spurs by devoted work for the colliery practitioner, though he was not one himself. The Blyth Division had had many ups and downs since the day it was founded at a meeting at which Dr. Cox was present, when the speaker was elected secretary, but he hoped that the present successful gathering was the beginning of a new stage of activity. The motion was seconded by Drs. DICKIE and BEATON of Morpeth and carried unanimously.

Oxford and Reading Branch: Oxford Division.

A MEETING of the Oxford Division was held at the Radcliffe Infirmary on March 23rd; in the absence of the chairman, Dr. R. W. CRUICKSHANK took the chair. The HONORARY SECRETARY read a letter from the Director of Education of the Oxfordshire County Council, inviting the Division to send a deputation to discuss the question of certificates of absence from school. A motion that no conference with the Education Committee should be held until that body was willing to consider the question of the payment for such certificates having been defeated, Dr. R. W. Cruickshank and Mr. N. E. Waterfield, with the honorary secretary, were appointed representatives of the Division to confer with the education authorities. The honorary secretary read a letter from the Medical Secretary of the Association in connexion with the Dogs' Protection Bill. Dr. A. G. GIBSON, speaking from the standpoint of one possessing a vivisection licence, suggested that the honorary secretary should write to the members of Parliament for the area, asking them to vote against the bill. He added that while medical practitioners yielded to none in their fondness for animals and had no desire to cause unnecessary suffering, they were already seriously restricted in experimental work: but for the use of dogs in research insulin would not have been discovered.

Mr. WATERFIELD, seconding the proposal, referred to a meeting of the Antivivisection Society at Banbury, when no new members had been secured; and Dr. F. G. GARDNER, supporting the proposal, suggested that the mentality of supporters of the bill resembled that of the old lady who declined to live near Hyde Park, since she feared she would hear the shrieks from the dissecting-room at St. George's Hospital!

Dr. Gibson's suggestion was unanimously approved.

Clinical Cases.

Dr. R. H. SANKEY showed several *x*-ray photographs of gall bladders after the oral administration of tetraiodophenolphthalein.

Dr. A. G. GIBSON reported a case of an agricultural labourer, aged 17, who had a severe chlorotic anaemia, no other physical signs of disease being detected. The eggs of *Trichocephalus dispar* were found in the faeces, which were free from occult blood, and this parasite was believed to be the cause of the anaemia.

Dr. R. G. ANDERSON reported a case of pyopneumothorax in a man aged 36, following the rupture of a hydatid cyst into the pleura.

Mr. E. C. BEVERS showed a cutaneous horn, which had been removed from the right hand of a man, aged 67, who was by trade a joiner. This horn was nearly four inches long and was growing from the back of the right hand between the first and second metacarpals. It had been present for four years and had originated in a wart. The base of the horn was hard and suggested commencing epithelioma. After removal of the horn the raw surface was treated successfully by immediate pressure grafting, the wound healing in ten days. Commencing epithelioma was found subsequently at the base of the horn. Mr. Bevers also showed a woman, aged 47, with a tumour of the horizontal and ascending rami of the lower jaw on the right side. The tumour had been growing for a year and had produced considerable expansion of the jaw; in one spot there was eggshell crackling. An *x*-ray photograph showed much thinning of the jaw, except at its lower posterior margin. The tumour was removed and proved to be an endothelioma of the parotid type.

Mr. HUGH WHITELOCKE showed a specimen of calculus formation round a piece of catheter left in a patient's bladder after prostatectomy. He also showed a specimen representing seven-eighths of a thyroid gland, which had been removed from a young man, aged 20, who had suffered from Graves's disease for six months, and whose metabolic rate had improved markedly after the operation.

Referring to the paper of Mr. H. S. Souttar (BRITISH MEDICAL JOURNAL, March 19th, p. 501), Mr. Whitelocke read notes of a patient, aged 55, from whom he had excised a chronic ulcer of the lesser curvature of the stomach. He also reported the case of a patient, aged 57, who had suffered from sciatica in the right side for nine months. An *x*-ray examination showed marked irregularity and thickening of the ischium on the right side, and lipping of the lumbar vertebrae.

Shropshire and Mid-Wales Branch.

A MEETING of the Shropshire and Mid-Wales Branch was held at the Royal Salop Infirmary on March 22nd, when Professor LOUISE MCILROY of the Royal Free Hospital, London, delivered a paper on "Pregnancy complicating tumours of the uterus and adnexa." There was a very good attendance, and the chairman, Dr. HOLLIES, pointed out that this was the first occasion that the branch had been privileged to listen to a lady lecturer. Dr. MCILROY first dealt with fibroids, illustrating the great difficulty which sometimes arose in diagnosing pregnancy in association with them. She pleaded for conservancy in these cases, and strongly deprecated hysterectomy. Subserous fibroids could often be enucleated, and the pregnancy proceed normally. After dealing with ovarian cysts, the lecturer touched on her routine treatment of puerperal septicaemia, and described the process of injecting glycerin into the uterus through a short catheter, this being kept in position by a catgut suture through the cervix. She was indebted to Dr Remington Hobbs for first bringing this to her notice.

Professor McIlroy was cordially thanked for her very interesting paper, and the hope was generally expressed that she would return at no distant date to enlighten the members on some other subject in gynaecology.

Prior to the paper the Medical Secretary's circular on the Dogs' Protection Bill was discussed, and the following resolution was *carried unanimously*:

> That this meeting of medical practitioners, representative of the Shropshire and Mid-Wales Branch of the British Medical Association, records its entire approval of the principle of experiments on animals, believing, as it does, that the relief of suffering is thereby advanced. It is convinced that for certain types of experiment the dog is much more [illegible] animal. It deplores the efforts of the [illegible] Dogs' Protection Bill to restrict the pr[illegible] it further emphatically protests again[illegible]ral principles and humanity of those [illegible]ged in such research.

The secretary was instructed to draft a letter embodying the above resolution, to be sent to each of the six members of Parliament representing the area covered by the Branch.

Southern Branch: Portsmouth Division.

AT the meeting of the Portsmouth Division held at the Queen's Hotel, Southsea, on April 7th, when Dr. MEARNS FRASER was in the chair, there was an attendance of eighty-nine, of whom fifty sat down to the supper which as usual preceded the meeting at 9 o'clock.

At the conclusion of the business an address was delivered by Dr. HUGH MACLEAN, St. Thomas's Hospital, London, on "The medical treatment of gastric diseases." After giving a general survey of our knowledge of gastric function and its bearing on gastric diseases, Dr. Maclean devoted the principal part of his remarks to a description of the method of the treatment of gastric ulcer by means of large doses of alkali—a method which in practice he had found so successful that he thought it was only a matter of a short time before it was largely adopted in place of surgical operation. In discussing the etiology of cancer and gastric ulcer he stated that in his experience it was very rare for gastric ulcer to develop into cancer.

Dr. Maclean's address was most instructive and full of points of practical interest to the general practitioner. It was followed by a good discussion which was taken part in, amongst others, by Drs. BLACKMAN, LISTER WRIGHT, BOSWORTH WRIGHT, HILLMAN, JEANS, LUMB, MCASKIE, DEWEY, and LYTLE. A cordial vote of thanks to Dr. Maclean, proposed by Dr. JEANS and seconded by Dr. H. D. BROOK, brought a most successful meeting to a close.

Yorkshire Branch: Wakefield, Pontefract, and Castleford Division.

A LECTURE meeting of the Wakefield, Pontefract, and Castleford Division was held at the Great Bull Restaurant, Wakefield, on March 10th, when Dr. GIBSON was in the chair, and thirty-six members were present.

Dr. G. W. WATSON, physician to the Leeds General Infirmary, gave an extremely interesting address on the "Diagnosis of early

phthisis." He laid stress on the importance of an accurate history, fatigue at the end of the day, haemoptysis in the absence of heart disease, and anal fistula.

Dr. G. E. COOPER expressed the opinion that radiology was of very little assistance in the diagnosis of early apical infection. Quite considerable infection and fibrosis of the bronchi had been frequently found in the absence of any discoverable physical signs. He considered that screen examinations were frequently of more use than the film.

Dr. JOHNSTON, chief tuberculosis medical officer for the West Riding, considered that it was almost impossible to make a diagnosis of early phthisis at one consultation, however careful the examination, and he recommended "observation beds" for suspects at sanatoriums.

Dr. HILLMAN considered that there would be less early phthisis to diagnose if provision were made for the segregation of cases of advanced tuberculosis. Drs. GIBSON and STEVEN also took part in the discussion.

FIFE BRANCH.

Medical Charities.

THE Charities Committee of the Fife Branch, which was formed last year, sent a circular to all members at that time putting before them the present deplorable position of medical charities and appealing for subscriptions. The result did not come up to the committee's expectations and a further appeal has now been circulated.

Having enumerated the general medical charities now in existence, and emphasized the point that the policy of the British Medical Association is to devote any sums it may collect to the support of these funds and not in any way to act as a rival to them, the circular states that the Fife Branch is very anxious to prove that its members are not behind those of any other area in regard to their duties to the charities, and urges every local practitioner to subscribe some amount, however small, to so good an object. The Branch aims at getting a subscription from every medical practitioner in the area; but in order that those who are already subscribing to one or more of the charities should not be troubled further, it is essential that the Charities Committee should know who are subscribing, to what charities and through what channel. This information will be registered, and the committee will then be able to devote its attention to those who do not subscribe. It is the aim of the Association to raise an annual income of at least £20,000; to achieve this end it is essential that every member of the profession should subscribe as much as he possibly can. With the circular is enclosed a form which it is hoped every member of the Branch will fill up and return at an early date to the honorary secretary of the Charities Committee, Dr. C. E. Douglas.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships, as follows:

A Scholarship, known as the ERNEST HART MEMORIAL SCHOLARSHIP, of the annual value of not more than £200, and three other RESEARCH SCHOLARSHIPS, each of the annual value of not more than £150, for research in any subject (including State Medicine) relating to the Causation, Prevention, or Treatment of Disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1927. A Scholar may be reappointed for not more than two additional terms. *A Scholar may hold a junior appointment at a University, Medical School, or Hospital* provided the duties of such appointment do not interfere with his work as a Scholar.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

Applications.

Applications for Scholarships and Grants for the year 1927–28 *must be made not later than Saturday, June 4th, 1927*, on the prescribed form, a copy of which will be supplied by the Medical Secretary on application. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated to whom reference may be made.

March 5th, 1927. ALFRED COX, *Medical Secretary.*

National Insurance.

LOCAL MEDICAL AND PANEL COMMITTEES.

WARWICKSHIRE.

A MEETING of the Warwickshire Panel and Local Medical Committee was held at Coventry on March 24th, Dr. HERBERT MALINS presiding.

Extended consideration was given to the proposals outlined in the Insurance Acts Committee's Circular M. 25 bearing upon medical certification. The committee agreed to recommend the Insurance Acts Committee to endeavour to maintain the present unfettered free choice of doctor as desirable in principle. The committee considered, however, that such free choice may entail extra certification owing to the new doctor's lack of acquaintance with the clinical history of patients transferring during or shortly after a period of certification by the old doctor. To check hasty transfer it was recommended that, apart from mutual consent of the doctors concerned, an insured patient should be required to give the Insurance Committee at least two weeks' notice of his desire to transfer. The committee also expressed the view that approved societies should refer to the regional medical officer all doubtful cases where an insured member is signed on the funds having recently been declared off by another doctor.

The difficulty of obtaining volunteers for the keeping of statistics required by the Insurance Acts Committee was considered. It was resolved to suggest to the Medical Secretary that specimen sets of the necessary forms should be made available for circulation to all local doctors by the honorary secretary with an explanatory memorandum.

The question of the use of radium in the hands of general practitioners having recently emerged and the Radium Institute having been consulted, it was resolved to inform the Insurance Committee that the Local Medical Committee was of opinion that treatment by radium is of a highly technical character requiring considerable clinical skill and experience for the estimation of dosage and exposure; and that such treatment was thought to be outside the scope of medical benefit. Upon a similar question involving the use of a particularly expensive proprietary preparation the committee resolved to notify the Insurance Committee "that it is not open to the Panel Committee under the regulations to prohibit the use by an insurance practitioner at the cost of the Drug Fund of any preparation, whether proprietary or otherwise, coming under the category of drug or medicine; but the Panel Committee deprecates the use of expensive glandular products and of endocrine treatment generally except as the result of the practitioner's individual experience and conclusions based upon his own study of the needs of his patient."

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders A. E. Malone to the *Pembroke* for R.N. Barracks, Chatham, for duty with S.R.A., Chatham Hospital, as Naval Health Officer, Nore Command; S. Bradbury to the *Dunedin*; S. F. Dudley to the *Pembroke*, additional, for R.N. Hospital, Chatham, and as specialist in bacteriology; T. C. Patterson to the *Frobisher* as Squadron Medical Officer.

Surgeon Lieutenants (short service) J. S. Harper, W. C. Sloan, A. S. Nicol, and H. M. Martin have transferred to the permanent list.

Messrs. J. D. Sayers, T. L. J. Barry, L. P. Sayers, and E. W. Bingham have entered as *Surgeon Lieutenants for short service, and have been* appointed to R.N. Hospital, Haslar, for course of instruction.

ROYAL ARMY MEDICAL CORPS.

Captain R. L. Ritchie, O.B.E., to be Major (prov.).

The following Captains to be *temporary Captains* and temporarily relinquish the rank of Captain: J. A. Quin and E. A. Tozer.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leaders P. M. Keene to R.A.F. Depot, Uxbridge; R. H. Knowles to Palestine General Hospital.

Flight Lieutenants T. J. X. Canton to R.A.F. Base, Calshot; J. Parry-Evans to Headquarters, Egypt; L. C. Palmer-Jones to No. 208 Squadron, Egypt; D. B. Smith to Station Commandant, Basrah.

Flight Lieutenant J. G. Skeet relinquishes his temporary commission on completion of service.

Flying Officers R. Thorpe and E. J. T. McWeeney to R.A.F. Depot, Uxbridge; P. D. Barling to No. 8 Squadron, Aden; J. McM. Wilder to R.A.F. British Hospital, Iraq; A. L. St.A. McClosky to Home Aircraft Depot, Henlow.

INDIAN MEDICAL SERVICE.

The services of the following officers are placed at the disposal of the Government indicated:—*Bihar and Orissa:* Majors L. S. Modi and O. R. Unger (perma in the Jail Department; Major R. R. M. Porte *Bombay:* Major R. V. Martin (permanently) for Department.

Lieut.-Colonel G. Hutcheson is appointed to officate as Inspector-General of Civil Hospitals and Prisons, Assam.

Captains to be Majors: A. Y. Dabholkar, M.C., R. N. Khosla, R. N. Kapadia, M.C., S. A. McSwiney, and H. S. Rajan.

To be Lieutenant: Dr. Kulwant Rai.

REGULAR ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Major J. W. G. H. Riddel, M.C., resigns his commission and retains the rank of Major.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel D. Shannon, T.D., resigns his commission and retains his rank with permission to wear the prescribed uniform.

Second Lieutenant R. McI. Gordon, D.F.C., late R.A.F., to be Lieutenant.

VACANCIES.

ASHINGTON HOSPITAL.—Junior House-Surgeon. Salary at the rate of £100 per annum.

AYLESFORD: BRITISH LEGION VILLAGE, HOSPITAL, SANATORIUM AND SETTLEMENT FOR TUBERCULOUS EX-SERVICE MEN, Preston Hall.—Junior Physician. Salary £100 per annum.

BETHLEM HOSPITAL, Lambeth Road, S.E.1.—Two House-Physicians (males, unmarried). Honorarium £25 per quarter.

BILSTON URBAN DISTRICT.—Medical Officer of Health. Salary £800 per annum.

BIRKENHEAD GENERAL HOSPITAL.—Two House-Surgeons (male). Salary £200 and £150 per annum respectively.

BIRMINGHAM: GENERAL HOSPITAL.—Biochemist. Salary £500 per annum.

BLACKBURN AND EAST LANCASHIRE ROYAL INFIRMARY.—Third House-Surgeon (male). Salary £150 per annum.

BRADFORD CITY.—Assistant Dentist. Salary £450 per annum, *plus* bonus, at present £28 12s. a year.

BRADFORD ROYAL INFIRMARY.—(1) House-Surgeon. (2) House-Physician. Males (unmarried). Salary £150 per annum each.

BRIGHTON AND HOVE PROVIDENT DENTAL HOSPITAL.—Anæsthetist.

BRITISH GUIANA.—Surgeon Specialist. Salary £1,200 per annum.

BRITISH RED CROSS AND ORDER OF ST. JOHN.—Assistant Medical Officer (*male*) at the East Lancashire Tuberculosis Colony, Great Barrow. Salary £250 per annum.

BURSLEM: HAYWOOD HOSPITAL.—Resident Medical Officer. Salary £175 per annum.

CHARING CROSS HOSPITAL INSTITUTE OF PATHOLOGY.—Assistant Pathologist. *Salary at the rate of £500 per annum, rising to £680 after six months.*

CHESTER ROYAL INFIRMARY.—Honorary Surgeon in charge of the Ear, Nose, and Throat Department.

COVENTRY AND WARWICKSHIRE HOSPITAL.—(1) Member of Honorary Surgical Staff. (2) *Honorary Assistant Physician.*

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—(1) House-Physician. (2) House-Surgeon. (3) *Whole-time Casualty Officer.* Salary at the rate of £125 per annum.

EAST LONDON MUNICIPALITY, South Africa.—Medical Officer of Health. Salary £800 per annum, rising to £1,000.

ESSEX COUNTY COUNCIL.—Obstetric Specialist. Fee £5 5s. for each consultation.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Resident Casualty Officer (male). Salary at the rate of £100 per annum

GLOUCESTERSHIRE JOINT COMMITTEE FOR TUBERCULOSIS.—*Assistant* Medical Officer at the Standish House Sanatorium. Salary £250 per annum.

GLOUCESTERSHIRE ROYAL INFIRMARY AND EYE INSTITUTION.—Assistant House-Surgeon (male). Salary £120 per annum.

GRAVESEND AND NORTH KENT HOSPITAL.—Junior House-Surgeon. Salary at the rate of £150 per annum.

LANCASTER BOROUGH.—Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £500 per annum, rising to £600 on completion of one year's approved service.

LEEDS CITY.—Assistant Medical Officer of Health. *Salary £900 per annum.*

LEIGH INFIRMARY, Lancashire.—Resident House-Surgeon (male, unmarried). Salary £150 per annum.

MANCHESTER CITY.—Assistant Tuberculosis Officer (male). Salary £600 per annum.

MANCHESTER ROYAL INFIRMARY (CENTRAL BRANCH).—(1) Anæsthetist; salary at the rate of £100 per annum. (2) Junior House-Surgeon (lady); salary for eight months at the rate of £100 per annum, increasing to £200 per annum for four months as Senior.

MARSEILLES: QUEEN ALEXANDRA MEMORIAL HOSPITAL.—Resident House-Surgeon.

MIDDLESEX COUNTY COUNCIL.—Assistant Dental Officer. Salary at the rate of £500 per annum, rising to £700.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—(1) Out-patient Officer (male, unmarried); salary £150 per annum. (2) Assistant Orthopædic Surgeon.

MONTGOMERY COUNTY COUNCIL.—County Medical Officer and School Medical Officer. Salary £600 per annum.

NEWCASTLE-ON-TYNE: ROYAL VICTORIA INFIRMARY.—Honorary *Surgeon.*

PRESTWICH: COUNTY MENTAL HOSPITAL.—Assistant Medical Officer. Salary £350 per annum, rising to £450.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, S.E.1.—(1) House-Surgeon. (2) Non-resident Casualty Officer. (Males.) Salary £100 and £150 per annum respectively.

ST. LEONARDS-ON-SEA: BUCHANAN HOSPITAL.—(1) Out-patient Physician for Diseases of the Chest. (2) Out-patient Physician for Diseases of the Nervous System.

SALFORD UNION INFIRMARY.—Radiologist. Salary at the rate of £150 per annum.

STOCKTON AND THORNABY HOSPITAL.—Junior Resident Medical Officer (male, unmarried). Salary £150 per annum.

STOKE-ON-TRENT EDUCATION COMMITTEE.—Assistant School Medical Officer. Salary £500 per annum, rising to £600.

WAKEFIELD: CLAYTON HOSPITAL.—House-Surgeon. Salary £150 per annum, rising to £175 after six months' service.

WALSALL GENERAL HOSPITAL.—Senior and Junior House-Surgeons. Salary £200 and £125 per annum respectively.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) Assistant Physician. (2) Honorary Medical Radiologist (Diagnosis).

WHITTINGHAM: COUNTY MENTAL HOSPITAL.—Sixth Assistant Medical Officer. Salary £350 per annum, rising to £450.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

APPOINTMENTS.

DAVIE, T. M., *M.C.*, M.D., Medical Superintendent, East Riding Mental Hospital, Beverley, Yorkshire.

HESLOP, A. H., D.S.O., O.B.E., M.B., B.S.Durh., F.R.C.S.Eng., Surgeon to the Royal Isle of Wight County Hospital, Ryde.

HOLMES, Evelyn M., M.B., Ch.B., Medical Officer in charge of After-care and House-Surgeon, Shropshire Orthopædic Hospital, Oswestry.

MACKINTOSH, R. D., M.B., Assistant School Medical Officer at Hull.

MORRIS, Miss Eileen, M.B., B.S.Lond., House-Surgeon to the New Sussex Hospital for Women and Children, Brighton.

PATERSON, Arthur T., M.D.Edin., F.R.C.S.Edin., D.P.H.Birm., Honorary Ophthalmic Surgeon to the Eye Infirmary, Newcastle-on-Tyne.

STRATFORD, Howard M., F.R.C.S.Edin., Consulting Surgeon to the Westminster General Dispensary.

WESTMINSTER HOSPITAL.—*House-Physicians:* B. A. Smith, M.R.C.S., L.R.C.P., and D. P. Holmes, M.B., B.S. *House-Surgeon:* R. A. Haythornthwaite, M.B., B.Ch. *Resident Obstetric Assistant:* P. P. Slater, M.R.C.S., L.R.C.P.

POST-GRADUATE COURSES AND LECTURES.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, *Tottenham*, N.15.—Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics, Operations. Thurs., 11.30 a.m., Dental Clinic; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics, Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics, Operations.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Victoria Infirmary: Wed., 4.15 p.m., Surgical Cases.

British Medical Association.

Preliminary.

ANNUAL MEETING, NOTTINGHAM, 1926.

1. The Council has expressed to the President, Mr. R. G. Hogarth, the Honorary Local Secretary, Mr. A. M. Webber, their medical colleagues and the many lay persons and authorities (especially the Corporations of Nottingham and Buxton, and Messrs. Boots, Ltd.), the thanks of the Association for their efforts in making the 1926 Annual Meeting of the Association so successful.

ANNUAL MEETING, EDINBURGH, 1927.

2. The Annual Meeting, 1927, commences at Edinburgh, on Friday, July 15th, under the Presidency of Sir Robert Philip, M.D., F.R.C.P.E., LL.D.

HONOURS.

3. The Council has pleasure in announcing that during the present Session honours have been conferred upon the following members, to whom the congratulations of the Association have been sent:—

Knighthood.

Henry Head, F.R.S., F.R.C.P.
Thomas Houston, O.B.E.

OBITUARY.

4. The Association has to deplore the loss of the following Members:—

Name.	Offices held in the Association.
Prof. John George Adami	Honorary Local Secretary, Montreal Meeting, 1897; President, 1905, and a Vice-President, 1902, of Section of Pathology and Bacteriology, and a Vice-President, 1897, of Section of Pathology.
Dr. Thomas Ridley Bailey	Member of Central Council, and of the Medico Political, Public Health, Insurance Acts and Welsh Committees; at one time President of the Staffordshire Branch, for many years a Member of the Branch Council, and a former Chairman of the South Staffordshire Division.
Dr. Frank Hugh Barendt	Member of the Lancashire and Cheshire Branch Council; Honorary Local Secretary, Liverpool Meeting, 1912; Vice-President of Section of Dermatology, 1913.

Dr. Lawrence Barnett ...	Former Secretary of the Hampstead Division; at one time Member of the Metropolitan Counties Branch Council.
Dr. Thomas Ashby Barron ...	Former Member of the Midland Branch Council.

Dharmadas Basu, I.M.S., Ret., Dr. Wm. Bruce Bell, Dr. Wm. Arthur Bernhard-Smith, Dr. Moore Montgomery Betty, Dr. Robert Leighton Blenkhorn, Sir Kailas Chandra Bose, Dr. Reginald Francis Bower, Dr. James Charles Bradshaw, Lt.-Col. Henry Arthur Bransbury, D.S.O., R.A.M.C., Dr. Alexander Tratman Bremner, Dr. Charles Brooks, Dr. Wm. Arthur Handcock Burkitt, Dr. Flora Butcher, Dr. Alexander Butler, Dr. John Bygott, Dr. Walter Francis Raphael Castle, D.S.C., Dr. George Joseph Chipperfield, Dr. Robert Henry Clarke, Dr. Wm. Robert Addison Coates, Dr. Ivy Collier, Dr. Digby Francis Baynes Cotes, Dr. Patrick G. Cotter, Dr. Herbert David Crook, Dr. Geoffrey Cross, Dr. John Thomas Crowley, Dr. Cecil John Davenport, Dr. Robert Charles De Lacey, Dr. Hubert Templer Depree, Dr. Joseph English, Dr. Gwilym Idwal Evans, Dr. Harold Maund Evans, Dr. Philip Francis Evans, Dr. Wm. Godfrey Evans, Dr. Richard Fegan, Dr. Robert Wm. Felkin, Dr. Patrick Joseph Finegan, Major Arthur Ormsby Fitzgerald, R.A.M.C., Ret., Dr. John Flynn, Dr. Gladys Maude Fraser, Lt.-Col. Wm. James Fraser, I.M.S., Dr. John Jones Gasperini, Flight Lt. Sydney George Gilmore, R.A.F.M.S., Dr. James Glover, Dr. James Wilford Good, Dr. John Hubert Griffin, Dr. Helena Adelaide Hall, Dr. Edmund Walter St. Clair Hannah, Dr. Helen Beatrice de Rastricke Hanson, Dr. George Wm. Hardie, Dr. Andrew Harris, M.B.E., Dr. Charles Joseph Harrison, Dr. Lionel Wykeham Hayward, Dr. Ernest Morgan Hearnden, Dr. John George Hewitson, Dr. Robert John Hillier, Dr. Claude Anthony Holburn, Dr. Alfred Hewston Holmes, Dr. Charles Evan Humphreys, Dr. Wm. Harry Hunter, Dr. John Wilkinson Davis Hyde, Dr. Arthur Conyers Inman, Dr. Joe Iredale, M.B.E., Dr. Edwin Brooke Jago, Dr. Arthur George Johnson, Surgeon Lt. Colin Joiner, R.N., Dr. David Jones, Dr. John Jones, Dr. Owen Clayton Jones, Dr. Wm. Owen Jones, Dr. Robert Jope, Dr. Alexander Charter Lambert, M.C., Dr. Leo Lane, Dr. Francis Henry Langlands, Dr. Alexander Lawrence, Dr. Harry Burton Lawson, Dr. Oliver Leitch, Dr. Lionel Hugh Lewis, Dr. Nynian Yeo Lower, Dr. James Luke, Dr. Wm. Lumsden, M.C., Dr. Francis James McArdle, Dr. James Ireland McCaa, Dr. David MacEwan, Dr. George Owen Carr Mackness, Dr. Thomas Bennett Wilson MacQuaide, Dr. Melrose Mailer, Dr. Constance Muriel Marrat, Major Wm. Edward Marshall, M.C., R.A.M.C., Dr. Frank Sirett Mathwin, Dr. Joseph Leopold Meynell, Dr. Alexander Sutherland Miller, Dr. Mary Wilhelminia Mitchell, Dr. Victor Gray Molteno, Dr. Wm. Frank Morgan, Dr. Alexander Morrison, Dr. Robert Morton, Dr. Sidney Gwenffrwd Mostyn, Dr. Wm. Duke Gorges Mulloy, Dr. Samuel Clarke Noble, Dr. Dennis O'Mahony, Dr. Charles Alexander Page, Dr. John Marie Anthony Paling, Dr. Charles John Linton Palmer, Dr. Harry Palmer, Dr. Jethalal Nathalal Parikh, Dr. James Henry Parkinson, Dr. Wm. Robert Parkinson, Dr. Edwin Stephen Pasmore, Dr. Walter Paterson, Mr. Cuthbert Balfour Paul, Dr. Wm. Kerr Peden, Dr. Herbert Francis Perkins, Dr. Lionel Banks Perry, Major Ernest Cyril Phelan, D.S.O., M.C., R.A.M.C., Dr. Llewellyn Caractacus Powell Phillips, Dr. James Shaw Pickford, Dr. Wm. Arthur Pierce, Dr. Hugh Walter Pigeon, Lt.-Col. Lionel John Pisani, I.M.S., Ret., Dr. Frederic Wm. Pollard, Dr. John Pollock, Dr. Ronald George Ponton, Dr. John Fletcher Porter, Dr. Samuel Arthur Powell, Dr. Laura Williams Pugh, Dr. Edward John Joseph Quirk, M.B.E., Dr. Osborne Henry Reddall, Surg. Capt. John Charles Groscort Reed, R.N., Ret., Dr. John Reid, Dr. Augustus Cecil Renton, Dr. Arthur Rhodes, Dr. Richard Richmond, Dr. Charles Samuel Alfred Rigby, Colonel Edmund John Erskine Risk, Dr. Robert Wm. Roberts, Dr. Andrew Robertson, Capt. George Cuthbert Robinson, R.A.M.C., Dr. Cecil Beaumont Roscrow, Dr. Alexander Ross, Dr. John Merry Ross, Prof. Carmel Samut, Dr. Thomas Scanlan, Dr. Wm. Bonwill Shanasy, Dr. Wm. Shirreffs, Dr. Edward Swan Simpson, M.C., Dr. Walter Petrie Simpson, Dr. Philip Lyonel Grey Skipworth, Dr. Charles Vance Smith, Dr. Daniel Lloyd Smith, Dr. Herbert Sidney Smith, Dr. Roland Dunn Smith, Dr. Walter Richard Hugh Smith, Dr. James Hugh Sproat, Dr. Arthur Powell Square, Lt.-Col. Robert Fraser Standage, C.I.E., I.M.S., Ret., Dr. John Wm. Staniforth, Dr. Walter Stapley, Dr. Ernest George Best Starkie, Dr. John Wm. Steven, Dr. Patrick Stevenson, Dr. Robert John Stevenson, Dr. Henry Stoker, Dr. Herbert Stone, Dr. Charles Frederick Strange, Dr. Robert Charles Stuart, Dr. John Norman Macdonald Sutherland, Dr. James Swan, M.C., Dr. Mary Alfreda St. Clair Swann, Dr. Herbert Mayris Sylvester, Major Frank Stuart Tamplin, R.A.M.C., Dr. Lewis Dunbar Temple, Dr. Percy George Temple, Dr. Andrew Douglas Ramsay Thomson, Dr. John Herbert Tonking, Dr. Arthur Hewett Turner, Dr. Reginald Charles Verley, Dr. Thomas Mayne Reid Waddell, Dr. Wm. Alexander Wadsworth, Dr. Sydney Arthur Thomas Ware, Dr. James Watson, Dr. Frederick Kearsley Weaver, Dr. Wm. Henry White, Col. Wm. Westropp White, C.B., C.M.G., I.M.S., Ret., Dr. George Wight, Major Charles Louis Williams, I.M.S., Ret., Dr. Albert Emanuel Williamson, Dr. Robert Eardley Byam Wilmot, Dr. Daniel Wilson, Dr. George Wilson, Dr. Henry Clark Wilson, Dr. John Winder, Dr. Graham Shaw Arnold Smith Wynne, Dr. David Hastings Young.

ATTENDANCES.

5. The Council submits in Appendix I. a list of attendances at meetings of the Council from the Annual Representative Meeting, 1926, to April, 1927.

ANNUAL MEETING, 1928.

6. In connection with the Annual Meeting at Cardiff in 1928, the Cardiff Division has nominated Sir Ewen Maclean as President for 1928-29.

The Council recommends:—

Recommendation: That Sir Ewen Maclean, M.D., F.R.C.P., F.R.S.E., be elected President of the Association, 1928-29.

ANNUAL MEETINGS, 1929 and 1930.

7. Invitations were received for the Annual Meetings as follows:—Manchester, for 1929; Bournemouth, for 1929; and Winnipeg at an early date. The Council is of opinion that

the Association should accept the invitation of the Manchester Division (which is endorsed by the Salford Division) for 1929, and the Canadian invitation (endorsed by the Winnipeg Medical Society) for 1930. The Association last met in Manchester in 1902, and in Canada (Toronto) in 1906.

The Council recommends:—

Recommendation: That the Annual Meeting of the Association in 1929 be held in Manchester.

Recommendation: That the Annual Meeting of the Association in 1930 be held in Winnipeg, Canada.

Press Arrangements in connection with the Sections at the Annual Meeting.

8. With the exception of the Sections of Medical Sociology and Public Health, the Sections at the Annual Meeting are closed to the press and this has been the cause of dissatisfaction and misunderstanding. Representations have been made by a deputation from the Institute of Journalists to the effect that the position of press representatives is most invidious, it being left to them either to gain entrance to the Sections unfairly, or to get their information from members who have been present, which they declare it is quite easy to do. They asked that the Association should allow accredited representatives of the press to enter the Sections and use what was being said in the discussions for their own guidance, the names of the speakers not being published; and expressed the opinion that if reporters were put on their honour in this way the results would be more satisfactory to everybody concerned. The Council has decided, as an experiment, that an advance copy of the programme of the Sections shall be sent to the Institute of Journalists, the newspapers, and the press agencies, with a request that the recipients shall inform the Association within three days to which discussions, if any, they would like to send a representative, it being clearly understood that the admittance of such representative would be conditional upon the sanction of the officers of the Section concerned and upon undertaking not to report anything which the President of any Section requests them not to. Officers of Sections will be asked to inform members attending the Sections that official arrangements are made whereby the press obtains such information as it is advisable should be published, and to request those members attending not to discuss the proceedings of the Sections with representatives of the lay press.

NOMINATION OF DR. F. G. THOMSON AS A VICE-PRESIDENT.

9. The Council recommends:—

Recommendation: That F. G. Thomson, M.A., M.D., F.R.C.P., be elected a Vice-President of the Association under Article 40 and By-law 73 as a recognition of his services as President of the Association for the year 1925-26.

AUSTRALASIAN MEDICAL CONGRESS.

10. The Council has pleasure in reporting that Dr. H. Cooper Pattin, late Medical Officer of Health for Norwich and an old member of the Association, represented the Association at the Australasian Medical Congress held at Dunedin, in February, 1927, and has reported that he was treated with lavish hospitality and made welcome by everybody. He had the honour of responding at the official dinner to the toast of "The British Medical Association," proposed by the Acting Prime Minister.

CANADIAN MEDICAL ASSOCIATION.

Annual Meeting, 1926.

11. Mr. T. Ritchie Rodger, F.R.C.S., of Kingston-upon-Hull, who was the Association's official delegate to the Canadian Medical Association's Annual Meeting at Victoria, British Columbia, and who contributed thereat a paper on "The Problem of the Acute Ear" has had conveyed to him the appreciation and thanks of the Council for representing the Association on that occasion.

Annual Meeting, 1927.

12. The Council has pleasure in reporting that Sir Lenthal Cheatle (London), and Drs. A. L. Fleming (Bristol), Strickland Goodall (London), and Gilbert Scott (London), have accepted the invitation of the Canadian Medical Association to be present at its Annual Meeting at Toronto, June, 1927, and that at the request of the Council they have agreed to act as official delegates of the British Medical Association.

AMERICAN MEDICAL ASSOCIATION ANNUAL SESSION, 1927.

13. The American Medical Association, having invited the Association to send one or more delegates to its Seventy-Eighth Annual Session, to be held at Washington, May, 1927, the Council is pleased to be able to report that Dr. Helen Ingleby, now Professor of Pathology, Women's Medical College of Pennsylvania, and Dr. H. M. Cohen, of Manchester, Editor of the *British Journal of Anæsthesia*, have agreed to act as official delegates of the Association.

THE LISTER CENTENARY.

14. The Council has pleasure and pride in reporting that the Association has taken an active part in the celebration of the 100th anniversary of the birth of Lord Lister. The President of the Association acted on the Committee which organised the celebration, and the Council, in addition to subscribing £50 to the Guarantee Fund, had the pleasure of placing at the disposal of the Committee the Great Hall of the Association for a reception by the Prime Minister of the Foreign Delegates to the Celebration and of members of the Lister family, on Tuesday, April 5th. The President deposited a wreath on behalf of the Association at the Memorial Service in Westminster Abbey on April 6th. Dr. G. A. Allen, who represented the Association at the Official Religious Service in the Cathedral, Glasgow, on April 1st, also deposited a wreath thereat on behalf of the Association. Lord Lister was an honoured member of the Association for 49 years, from 1863 until his death in 1912; he was President of the Section of Surgery at the Annual Meeting in 1870 and again in 1875; and he gave the Address in Surgery at the Annual Meeting of the Association at Plymouth in 1871.

UNIVERSITY COLLEGE, LONDON, CENTENARY CELEBRATIONS.

15. The Association being invited to appoint a delegate to attend the celebration of the 100th anniversary of the University College of London on June 23rd, 1927, has appointed Sir Dawson Williams.

FLAGS FOR THE GREAT HALL IN THE B.M.A. HOUSE.

16. To the 22 areas which were reported last year as having presented a Flag for the Great Hall must now be added *Belfast, Dublin, Ipswich and Leeds. These flags form* a very distinctive feature of the decoration of the Hall and the Council hopes that the 17 niches in respect of Bath, Cheltenham, Canterbury, Cambridge, Chester, Cork, Derby, Exeter, Kingston-upon-Hull, Leamington, Northampton, Norwich, Oxford, Plymouth, Ryde, Southampton and Torquay may before long be filled.

DR. R. LANGDON-DOWN AND THE CHAIRMANSHIP OF THE ETHICAL COMMITTEE.

17. The Council has placed on record its grateful appreciation of the specially valuable services rendered to the Association by Dr. Reginald Langdon-Down during his tenure of office as Chairman of the Ethical Committee, 1919-26, and has expressed its satisfaction that it may count on his continued co-operation in the work of that Committee.

OFFER TO ASSOCIATION OF PREMISES AS JENNER MEMORIAL.

18. Lord Berkeley was good enough to offer to present Phipps Cottage, at Berkeley, closely associated with the early work of Edward Jenner, to the Association for the purpose of establishing a Jenner Memorial Exhibition. The Council gave this offer very careful consideration but regretfully found it necessary to decline it, because it is believed that it would be unlikely that another really satisfactory Jenner Memorial Exhibition could be established, seeing that a very extensive collection of Jenner relics is already contained in the Wellcome Historical Medical Museum. Lord Berkeley has been thanked for his kind offer.

USE OF THE B.M.A. HOUSE BY DIVISIONS AND BRANCHES.

19. The Council has considered under what conditions the House of the Association can be used by the local units of the Association, apart, of course, from the ordinary hire of rooms for Division and Branch purposes, and has come to the conclusion that when any Division or Branch desires to hold a meeting of a public or semi-public nature in the House the special permission of the Office Committee must first be obtained.

LEGAL ACTIONS COMMITTEE.

20. For the purpose of assisting the officials of the Association and of creating some degree of uniformity in dealing with such matters, the Council has set up a Legal Actions Committee to consider and report to the Council, and to act in emergency, in regard to any threatened legal action against the Association or any such action which it may be contemplated should be undertaken by the Association; to watch the course of any such action, instruct the Solicitor of the Association, and keep the Council advised thereon. The Committee consists of the Chairman of Council, Chairman of Representative Body, Treasurer, Chairman of the *Journal* Committee, Chairman of the Central Ethical Committee, the Editor, the Medical Secretary, and the Financial Secretary.

APPOINTMENT DURING YEAR OF REPRESENTATIVES OF ASSOCIATION ON OUTSIDE BODIES.

21. The following appointments have been made by the Council during the year:—Executive Committee of the National Association for the Prevention of Infant Mortality, Dr. E. R. Fothergill; Council of the Society of Medical Officers of Health, Dr. H. B. Brackenbury and Dr. W. Paterson; British Sub-Committee of the Committee on Rheumatism of the International Society of Medical Hydrology, Dr. E. R. Fothergill; Joint Tuberculosis Council, Dr. A. Lyndon and Dr. G. B. Hillman; Court of Governors of the London School of Hygiene and Tropical Medicine, Sir Robert Bolam; Ministry of Health Advisory Medical Committee re Decennial Revision of the International List of Causes of Death, Dr. C. O. Hawthorne; Central Council for District Nursing in London, Dr. W. Paterson, Mr. Comyns Berkeley and Mr. H. M. Stratford; Royal Sanitary Institute Congress, 1927, Dr. G. F. Buchan and Dr. I. W. Johnson; Lister Centenary (London Celebrations) Committee, The President; Faculty of Insurance, Dr. H. B. Brackenbury; National Conference on Maternity and Child Welfare, 1927, Dr. E. R. Fothergill; Imperial Social Hygiene Congress, 1927, Dr. H. G. Dain, Dr. C. E. S. Flemming and Mr. N. Bishop Harman.

INTERNATIONAL UNION OF MEDICAL ORGANISATIONS.

22. The Council reported, in paras. 204-5 of its last Annual Report, that in response to an invitation to the Association to appoint representatives to attend in July, 1926, a meeting in Paris for the purpose of establishing an International Union of Medical Organisations, it had intimated to the convener that while it accepted in principle the desirability of such an organisation it was not possible to send a representative to the meeting, and reserved its liberty as to joining the proposed union until it had before it details of the constitution of that body. The Council has since then had an opportunity of considering the constitution of the union, and decided that it could not recommend that the Association join the organisation. A contribution of £50 has been made towards the funds of the union in respect of the preliminary work carried out during the time the Association was considering its position but had agreed in principle with the formation of such a body.

NATIONAL MEMORIAL TO LATE QUEEN ALEXANDRA.

23. The Council, on behalf of the Association, has contributed the sum of 100 guineas to the "Living" side of the National Memorial to the late Queen Alexandra, namely, the furtherance of district nursing under the auspices of the Queen Victoria Jubilee Institute for Nurses.

LOCUM BUREAUX.

24. It was reported to the A.R.M., 1926, that the subject matter of the following instructions of the A.R.M., 1925, was still under consideration:—

Minute 57.—Resolved: That a Bureau for the provision of locumtenents and assistants, with power for further expansion, be formed under the auspices of the Association with branches in such centres as may be deemed desirable, and that the organisation be set up under the control of the Association by means of (a) a separate Limited Liability Company, or (b) a Society registered under the Friendly Societies Act, whichever may be found the more suitable.

Minute 58.—Resolved: That the questions (i.) of confining the activities of the Bureau to provincial centres; (ii.) of the Bureau subsequently taking over the work of transfer of practices; and (iii.) of limiting the activities of the Bureau to newly qualified practitioners up to the end of the fourth year after registration under the Medical Acts, be reserved for further consideration by the Council.

Minute 59.—Resolved: That in any such scheme instituted as above, preferential treatment be given to members of the British Medical Association.

25. Considerable difficulties were found to arise in carrying out the instructions in the above Minutes exactly by the methods outlined therein. The Council believes that the facilities contemplated can under the circumstances best be obtained by an extension of the work of an existing medical agency, and possibly by the association of existing bureaux in certain centres with such agency. The Council now reports that in furtherance of this, it has purchased one-half of the issued shares of the Scholastic, Clerical and Medical Association, Limited, a medical agency of repute established for many years. The interest in the company so obtained will be used to ensure that one-half of the Board of Directors shall be representative of the British Medical Association. In this way influence will be exercised so that the work of the Agency shall be conducted on lines in accord with the policy of the British Medical Association laid down from time to time. The representatives of the British Medical Association who have been elected upon the Board of Directors since the purchase of shares are Sir Robert Bolam, Mr. N. Bishop Harman, Dr. S. Morton Mackenzie and Sir Humphry Rolleston, Bart.

PERMANENT RECORD OF WORKERS FOR ASSOCIATION.

26. The Council has decided to establish a permanent record of some of the workers for the Association, by means of a collection of the signatures of members of the Council and Representative Body, a commencement being made in this latter respect with the Edinburgh meeting of the Representative Body. In future all new members of either the Representative Body or the Council will be formally introduced to their fellow members at the first meeting attended by them and afterwards asked to sign the appropriate book.

PSYCHO-ANALYSIS.

27. Pursuant to Minute 76 of the A.R.M., 1926, a special Committee has been appointed to investigate and report upon the subject of psycho-analysis. The names of the members are:—The President, the Chairman of Council, the Chairman of the Representative Body, the Treasurer, Dr. Wm. Brown, Dr. R. G. Gordon, Dr. C. O. Hawthorne, Mrs. Isabel E. Hutton, M.D., Dr. R. Langdon-Down, Dr. E. K. LeFleming, Dr. L. R. Lempriere, Dr. Peter Macdonald, Dr. J. S. Manson, Dr. Hugh Miller, Dr. L. A. Parry, Dr. J. R. Rees, Dr. T. A. Ross, Dr. C. Worster-Drought. Dr. R. G. Gordon has been appointed Honorary Secretary of the Committee.

Finance.

28. The Financial Statement for the year ended 31st December, 1926, is set out in detail in Appendix II.

Despite the facts that the year 1926 witnessed the general strike, and that for the first time in its history the publication of the BRITISH MEDICAL JOURNAL was interrupted, the Council feels that there is much upon which, from a financial point of view, the members of the Association are to be congratulated.

The surplus for the year 1926 was estimated at £4,200; the surplus realized, after providing £1,000 to commence a sinking fund for the redemption of the leasehold property, was £7,875. But it will be remembered that during 1925 it was found necessary to realize the Conversion Loan Stock amounting to £3,635. This amount has now been replaced to Reserve Fund, together with a further sum of £2,365. The balance of Income over Expenditure carried to Surplus Account for the year 1926 thus amounts to £1,873 1s. 2d., the total at which this account now stands being £188,174 7s.

The sale of the freehold (429, Strand) was arranged during 1926, payment of the balance of the purchase price to the extent of £77,500 being deferred under certain conditions until 1930.

The amount shown in the Balance Sheet as "surplus on realization" includes, of course, amounts previously written off for depreciation.

The membership increased during the year by 1,826, the total at 31st December, 1926, being 32,350.

The income for the past three years has been as follows:

	£	s.	d.
1924	122,840	0	3
1925	131,787	4	5
1926	136,357	14	4

The expenditure for the same three years was:

	£	s.	d.
1924	113,917	0	0
1925	131,003	18	1
1926	134,484	13	2

BALANCE SHEET.

Liabilities.

29. The sundry creditors stand at practically the same figure as last year. An increase will be noted in the sundry creditors for publishing owing to a different method of treating the non-member subscriptions for the BRITISH MEDICAL JOURNAL. The liabilities in respect of the *Archives of Disease in Childhood* and the *Journal of Neurology* represent the cost to the Association of these publications during the year (see also Abstracts H and I in Appendix II).

The Reserve Account has been increased as set out above. The market value of the stocks taken in the Balance Sheet at £23,612 10s. was, on the 31st December, 1926, £24,848.

The Loan Account from the Westminster Bank of £80,000 had been repaid and partly replaced by a temporary overdraft of £29,146, as against the overdraft of £5,553 at 31st December, 1925.

This overdraft of £29,146 had been completely repaid by 15th March, 1927.

Assets.

30. *Leasehold Premises.* Depreciation at the rate of £2,000 per annum has been written off.

Scottish House.—The Scottish House of the Association appeared in the Balance Sheet of 1925 at the bare purchase price, and will be depreciated at the rate of £200 per annum until it stands at a nominal figure.

Investment.—The British Medical Association has purchased and controls 522 fully paid shares of £10 each in the Scholastic, Clerical and Medical Association, Ltd., but by special arrangement will not pay for 117 of them until the decease of the transferor. There is therefore a future liability of £1,170, but the voting power now vests in the Association (*see also para.* 25).

Subscriptions in Arrears.—The subscriptions carried forward as in arrear have increased in value, the number being 1,564 at the 31st December, 1926, as against 1,469 at the end of 1925, and as against 1,372 at the end of 1924. The item of £2,436 is represented largely by subscriptions of overseas members which may have been paid to the Branch Secretaries abroad, but have not reached the Head Office before the end of the year. (See also note on subscriptions in Income and Expenditure Account.)

Sundry Debtors for Advertisements have increased in value, but the reserve for bad debts has been maintained at last year's figure which is considered adequate.

Accrued Rents and Interest include £1,550 payable by the New Zealand Government.

INCOME AND EXPENDITURE ACCOUNT.

31. *Subscriptions.*—The subscriptions due for the current year show an increase of £3,815 due to the increase in membership during 1926, and to the number of members who cease to enjoy the reduction of subscription under the "newly qualified" clause. The subscriptions due for previous years which have been recovered during the year under review have again been shown separately, in order to demonstrate that the amounts shown in the Income and Expenditure Account as "subscriptions written off" are by no means lost. Of the sum of £2,120 7s. 9d. carried forward in the Balance Sheet of 31st December, 1924, as "Subscriptions in Arrear," no less a sum than £1,761 12s. 3d. was recovered during 1925. The balance of £358 15s. 6d. was included in the amount of £2,736 12s. 2d. written off in the Income and Expenditure Account at 31st December, 1925. A further sum of £224 8s. 9d. was received during 1926, which, together with the £1,442 15s. 5d. collected by the Head Office in respect of 1925 subscriptions written off, and £169 18s. 4d. recovered in respect of previous years' subscriptions, makes a total recovery of 694 subscriptions, representing £1,837 2s. 6d.

Rents.—The rents at 429, Strand, are now the property of the New Zealand Government.

Sundry Receipts.—The figure for 1926 includes refunds of amounts paid in respect of two Deferred Annuity Bonds.

ABSTRACT A.

32. *Representative Meeting.*—The attendances at the Annual Meeting for which fares were paid were:

1924, Bradford	173
1925, Bath	191
1926, Nottingham	165

A further saving was effected by the adoption of the new method of preparing and stencilling the Minutes of the Representative Meeting.

Annual Meeting.—There was a considerable saving in the amount claimed for fares by officers of Sections, and a saving in the cost of the *Handbook* of the Meeting. At Bath there were 12 Sections; at Nottingham 13.

Council.—The attendances at Council meetings:

In 1924 incurred 201 railway fares.
In 1925 incurred 194 railway fares.
In 1926 incurred 203 railway fares.

Secretaries' Conference.—The railway fares paid to Secretaries who were not members of Council or Representatives numbered:

In 1924, Bradford	29
In 1925, Bath	33
In 1926, Nottingham	48

Committees.—The various increases and decreases are shown in detail in the Abstract.

Insurance Acts Committee.—The National Insurance Defence Trust repaid to the Association during 1926 the following sums:

	£	s.	d.
Railway Fares	189	17	0
Printings	134	7	6
Sundries	53	0	9
	£377	5	3

Organization Committee.—It will be observed that the reprint of the Articles and By-laws cost £67 2s. 6d., and the second edition of the *Handbook for Newly Qualified Practitioners*, published during 1926, cost £324 15s.

ABSTRACT B.

33. *Charges on Bank Loan.*—The reduction of the Bank Loan has already been mentioned.

Legal Charges.—The figure for 1925 included the costs in connection with the lease of the new House. The charge for 1926 includes the cost of certain ethical cases.

Sundry Expenses.—The various extraordinary expenses in each year are set out in detail.

ABSTRACT C.

34. The figures for 1926 set out the normal central premises expenses in a full year.

ABSTRACT D.

35. The premium for deferred annuities for officials shows an increase, due to the adoption of the new Pensions Scheme.

The Office Staff Superannuation Fund has been adjusted in accordance with the report of the Actuary, as announced last year.

ABSTRACT F.

36. The subscription to Messrs. Lewis's Library has been increased to allow of more books being borrowed (instead of purchased). No books are now stored outside the Association's premises.

ABSTRACT G.

37. Although the first number of the BRITISH MEDICAL JOURNAL in 1927 is dated 1st January, 1927, the issue was printed in 1926, and the expenditure incurred falls in that year.

The following are comparative figures:

	1925.		*1926.*
Literary pages and Epitome ...	2,710	...	2,574
Supplement	536	...	516
Advertisements	2,746	...	2,786
	5,992		5,876

The amount required from Subscription Account for 1926 to cover the cost of production and issue of the JOURNAL was £13,480, or just under 8s. 4d. per member. The figure for 1925 was £12,730, or 8s. 4d. per member.

Despite the effect of the general strike and the interruption of the issue of the JOURNAL, the increased value of the BRITISH MEDICAL JOURNAL is reflected in the larger revenue from advertisements to meet the increasing cost.

The adverse effect of the increase of membership upon the revenue from sales to non-members has received comment in past years.

Composing, Machining, etc.—The number of pages decreased from 5,992 in 1925 to 5,876 in 1926, but the number of JOURNALS printed increased from 1,778,553 in 1925 to 1,805,862 in 1926.

On all occasions in 1926 it was found possible to print in standard sizes.

The comparative figures are:

	1925. £ s. d.	*1926.* £ s. d.
Machining ...	16,289 12 10	17,088 10 11
Composition ...	7,410 6 2	7,171 19 2
	£23,699 19 0	£24,260 10 1

Paper and Postage.—The increases have been occasioned by the larger number of JOURNALS issued.

ABSTRACTS H AND I.

38. Full details of the income and expenditure of these special journals published by the Association are here set out.

TRUST FUNDS.

39. *Office Staff Superannuation Fund.*—The market value of the stocks owned by this Fund on 31st December, 1926, was £17,622 9s. 8d.

B.M.A. Charities Fund.—The monies collected through this Fund had all been distributed by the end of the year.

APPORTIONMENT OF MEMBERS' SUBSCRIPTIONS.

40. The membership of the Association at the end of 1926 was 32,350. It must be remembered, however, that all members do

not pay the same rate of subscription; therefore the average amount of revenue per member is less than the full subscription of £3 3s.

The total revenue from subscriptions (excluding arrears) was £76,532 12s. 1d. for the year 1926, or roughly £2 7s. 4d. per member.

The following table has been calculated on this basis to show how the subscription of a member was apportionable towards defraying the expenses of the Association for the year ending 31st December, 1926.

		1926.	*1925*
	£	£ s. d.	£ s. d.
Central Meeting Expenses ...	7,149	4 5	5 9
General Association Expenses	5,055	3 2	5 4
Central Staff Expenses ...	17,935	11 1	11 8
Central Premises Expenses ...	9,945	6 2	4 7
Central Printing, Stationery, and Postage	2,755	1 9	1 11
Library Account	942	7	8
JOURNAL Account	13,480	8 4	8 4
Irish Committee Account ...	1,069	8	9
Scottish Committee Account...	2,080	1 3	1 5
Capitation Grants to Branches	6,155	3 9	3 7
Subscriptions written off for Deaths and Arrears... ...	3,311	2 1	1 11
Depreciation	4,037	2 6	2 1
Part Transfer to Reserve ...	2,402	1 6	—
Sundry Publications	157	1	—
	£76,532	£2 7 4	£2 7 7

ESTIMATE OF RECEIPTS AND EXPENDITURE IN 1927.

41. The following figures represent an approximate forecast of the possible revenue and expenditure for the current year:

Receipts.

	1926. Actual.			*1927.* Estimated.
	£	£		£
Subscriptions	78,369	2,131	Increase ...	80,500
Advertisements... ...	45,277	1,277	Decrease ...	44,000
Sale of JOURNALS, etc.	7,931	431	Decrease ...	7,500
Investments, Rents, etc.	4,272	228	Increase ...	4,500
Sundries	503	403	Decrease ...	100
	£136,357			£136,600

Expenditure.

	1926. Actual.			*1927.* Estimated.
	£	£		£
Central Meeting Expenses ...	7,149	1,101	Increase ...	8,250
General Association Expenses	5,055	55	Decrease ...	5,000
Central Staff Expenses ...	17,985	815	Increase ...	18,800
Central Premises Expenses..	9,945	105	Decrease ...	9,840
Printing, etc.	2,755	45	Increase ...	2,800
Library Account	942	58	Increase ...	1,000
JOURNAL Account	66,687	1,113	Increase ...	67,800
Irish Account	1,069	11	Increase ...	1,080
Scottish Account	2,080	20	Increase ...	2,100
Capitation Grants	6,155	385	Increase ...	6,500
Subscriptions written off ...	3,311	189	Increase ...	3,500
Depreciation	4,037	87	Decrease ...	4,000

Reserve Fund :				
Replacement of Stock ...	3,635	3,635	Decrease ...	—
Increase of Fund	2,365	135	*Increase* ...	2,500
	£134,337			£134,320
Estimated Surplus... ...			...	2,280
				£136,600

Organisation.

MEMBERSHIP FIGURES.

42. During 1926 there was a net increase in the membership of the Association of over 1,800, and during the four years 1923-6, the net increase has been over 8,000. The Council welcomes this as a recognition on the part of the profession of the value of the work of the Association. The most fruitful sources of recruitment were :—by Head Office summer recruiting issue and by circulars to newly qualified, 816; by other activities of Head Office, 552; by Oversea Branches, 704; by Home Divisions and Branches, 536.

43. The following is a summary of the changes in the membership during 1926 (the figures for 1925 are given for comparison):—

1925.			1926.		
New members	8,091		New members	2,872	
Paid arrears	833		Paid arrears	814	
Resignations withdrawn	28	3,952	Resignations withdrawn	39	3,725
Resignations	438		Resignations	467	
Deaths	807		Deaths	296	
Arrears	1,110		Arrears	1,134	
Expelled	2		Erased under Article 9 (c) (1)	2	1,899
Erased under Article 9 (c) (1)	2	1,859			
Increase ..		2,093	Increase ..		1,826

Membership, December 31st, 1925 .. .. 80,524.
Membership, December 31st, 1926 ... .. 82,350.

WORK DONE BY THE DIVISIONS, BRANCHES, AND FEDERAL COMMITTEES.

44. The great majority of the Divisions and Branches in the British Isles have furnished to the Council reports for 1926, and these reports, together with the reports of proceedings published in the *B.M.J.* Supplement, show gratifying activity of the local units of the Association. One in every three of the Divisions which have reported has held at least seven meetings during the year; the remaining bodies have held, in the great number of cases, four or five meetings.

On behalf of the Association, the Council desires warmly to thank the Chairmen, Presidents, Secretaries, Treasurers and Executives of the Divisions, Branches and Federal Committees for the highly creditable work which is being done.

FORMATION OF GROUPS IN THE ASSOCIATION.

45. From time to time circumstances have arisen which seemed to show that the machinery of the Association is defective as regards its capacity to obtain the opinions, and therefore represent the views, and protect the interests, of certain classes of practitioners, and the Council has considered the question whether any and if so what modifications of the machinery of the Association are necessary and advisable to meet this position. The difficulty was felt long ago when special arrangements were made for representation of the Services on the Council. The most recent outstanding example was provided by those members who are in the Public Health Service, and elaborate provisions were made for them, not only by giving them special representation in the R.B., Council, Public Health Committee, and Branch and Division executives, but also by creating a special liaison with the Society of Medical Officers of Health.

46. Examples of other special cases are: the representation always given on various Committees and Sub-Committees to the Poor Law Medical Officers Society; formation of special Committees, as for example, the Ophthalmic; and co-option from time to time to one or other of the Standing Committees or Sub-Committees (generally the Medico-Political and Parliamentary) of representatives of, for example, ship surgeons, prison surgeons, Ministry of Pensions officials, medical officers of schools, asylum medical officers, etc. All these permanent or temporary arrangements have been made chiefly because it was recognised that the section of the profession concerned was not large enough, or not large enough in most areas, to be able to put its special case up to the Divisions and through them to the R.B.

47. An outstanding example of the necessity for consideration of the principles under which arrangements of this kind should be made presents itself at the present moment. There is a growing body of pathologists, employed either part- or whole-time by hospitals and public authorities, and mostly engaged also in private practice, and new problems are arising in connection with their work. The Council last session appointed an *ad hoc* Committee to consider these problems, and on it several outside members with special experience were appointed. In the meantime, a number of pathologists have formed themselves into a new association. The fact that these men (mostly members of the Association) have felt it necessary to form a new body shows that they are too small in numbers or too widely scattered to feel that they can use the ordinary Division machinery for their purposes, and that they believe that their only safe course lies in forming a new body, though this means an additional subscription.

48. The formation of the Pathological Association and of a Spa Practitioners Association show that a number of our members do not feel that they can get all they want *inside* the Association, and so long as this can be said it is a reflection on the Association's claim to be able to collect the opinions of and speak for *all* classes of practitioners. In addition, every doctor engaged in a special line of work who joins an outside body whose object is to protect his special interests feels he has a good excuse for resigning from, or declining to join, the B.M.A.

49. The Council believes that the above considerations show the need for a new form of machinery to meet the requirements of those members of the Association who have common interests sufficiently distinct from those of the general body of members, and who by reason of their smallness in numbers and/or nature of distribution, are not able to meet to discuss those interests or to express their opinion in regard to them adequately through the Divisional machinery of the Association. The initiation of some such new machinery would obviate the need of such members going outside the Association to get their medico-political work done.

The Council recommends:—

Recommendation:—That the Representative Body approves the scheme for formation of Groups in the Association, and instructs the Council to prepare the necessary amendments to the Articles and By-laws for submission to the A.R.M. 1928, it being agreed that the Council, should the need arise, may give immediate provisional effect to the scheme (see Appendix III.).

LOCAL CONFERENCES FOR PROMOTION OF MEDICAL AND ALLIED SCIENCES.

50. The Council has considered following Minute 47 of the A.R.M. 1926:—

Minute 47 (Proposed by Brighton).—Resolved: That the Council be instructed to consider and report to what extent and under what conditions could financial and other assistance be given to Branches and Divisions of the Association in the United Kingdom which may desire to invite societies formed for the promotion of medical and (or) allied science to hold conferences within their respective areas,

and a memorandum by the Brighton Division on the subject.

51. There are already in existence, under the auspices or with the co-operation of Divisions and Branches of the Association, various arrangements for local discussion of clinical, scientific and allied subjects in which outside bodies or persons other than members of the Association to some extent participate. Many Divisions and Branches have meetings dealing with such matters to which lay persons interested are invited. There are also, financed direct from the central funds of the Association, B.M.A. Lectures, to which medical non-members are on occasion invited. Some Divisions and Branches have, as complimentary membership, persons distinguished in science resident within their areas but not eligible for ordinary membership of the Association. Incidentally this method of increasing the usefulness of the clinical and scientific work of the Divisions and Branches is one which, the Council considers, might well be further developed. There is also, in many areas, mutually helpful co-operation between the local Divisions or Branches of the Association and other local societies. Thus, often, the Division or Branch and a local medical or other scientific society, or local group of a central society, carry out in co-operation a concerted programme.

52. The Brighton Division proposes that Divisions, especially those situated where the Association cannot be expected to have its Annual Meeting, should be encouraged to invite from time to time into their areas central societies, for the purpose of the society's annual meeting or a special conference of up to a full 2-days' mutually agreed programme, to be held at a time, other than the Association's Annual Meeting, settled between the Division and the Society; that local hospitality and entertainment should be arranged with the town officially and with individual residents therein; that mutual arrangements be made as regards the expenses, the whole scheme for such a meeting or conference to be as for a miniature Annual Meeting of the Association; and that in order to assist Divisions which might desire to arrange such meetings or conferences, the Council should earmark a sum of money from which grants could be made on certain conditions, including a stipulation that there would be no competition with the Annual Meeting of the Association.

53. In the opinion of the Council it is not, in the interests of the Association or of the profession, desirable that a general provision of the kind should be made from the funds of the Association. The Council is, however, sympathetically disposed to the object which the Brighton Division has in mind, but considers (1) that it is best that any definite local proposals for holding of meetings or joint conferences of central societies in local areas should come from local units or representatives of the societies themselves where such exist, direct to the headquarters of the societies, for the decision of the latter; (2) that there could be no harm, and might be great advantage, in suggestions of the kind being made by a Division or Branch of the Association to the local unit or representatives of the society, provided that the Division or Branch did not in any way purport to commit the Division or Branch to expense outside the legal powers of the Association, or, without the previous sanction of the Council, to expense greater in amount than the Division or Branch could meet from the ordinary funds of the Association in its hands; and (3) that inasmuch as local municipalities are generally willing to help as regards the provision of hospitality on such occasions, this source of possible help as regards the organising of such joint conferences should be carefully borne in mind by any Division or Branch concerned. Subject as above, the Council would consider sympathetically, with a view if necessary to a supplementary grant and any other help in the power of the Head Office to give, any proposal by an individual Division or Branch for such a meeting or joint conference in its area.

ORGANISATION OF PROFESSION IN SOUTH AFRICA.

54. The A.R.M. at Nottingham (Min. 43) expressed its gratification with the arrangement whereby there is now only one organised body representing the profession in South Africa, namely, the "Medical Association of South Africa —Die Mediese Vereniging van Suid-Afrika (British Medical Association)," the constituent parts of which are the Branches and Divisions of the B.M.A. in South Africa.

The Federal Council of the new body has prepared, and the Council has approved a constitution, duties and powers of the Federal Council, including plenary ethical powers.

The Federal Council having been informed by its legal advisers of the need for incorporation of the Medical Association of South Africa, the Federal Council drafted, for the approval of the Home Association, a Memorandum and Articles of Association of the new body. The draft followed closely the spirit and letter of the Memorandum and Articles of Association of the parent body, and thus, subject to merely formal amendments, the Council had much pleasure in approving it. Steps have since been taken by the Federal Council for completion of the incorporation of the new body under the South African law accordingly.

Journal of Medical Association of South Africa—Die Mediese Vereniging van Suid-Afrika (British Medical Association).

55. Among matters requiring urgent settlement by its Federal Council on the formation of the Medical Association of South Africa, were the establishment of an official journal of the new body, and the question of appointing an Organising Medical Secretary for South Africa.

During the Medical Secretary's recent visit to South Africa the question arose of the provision of an official journal, to be sent (in addition to the *B.M.J.*) to every member in South Africa, following the example of Australia and New Zealand. The proposal was mooted that the two existing South African medical journals, namely, the "South African Medical Record" and the "Medical Journal of South Africa" should be amalgamated and the result published as the official organ of the Medical Association of South Africa. At that time the prospect of South Africa being able to have an Organising Secretary seemed rather remote, and the new journal was suggested rather as an alternative, but it was always agreed that the journal and the Secretary were complementary in the work of organisation and that both should be secured as soon as possible.

The Federal Council applied itself with great energy to these questions, and as a result a scheme was formulated (*i.*) for the setting up in the place of the two medical journals of a new journal, to be called "The Journal of the Medical Association of South Africa (British Medical Association)"; and (*ii.*) for appointing an Organising Medical Secretary. In connection with the matter, the Federal Council applied to the home Association for a grant of £1,000 per annum, possibly for a period of three years.

The Council recognised that such a journal as was proposed would be a very good means of keeping the members in touch with their Branches, and the detailed proposals made by the central executive, and the particularly with their Federal Council for amalgamation of the two existing journals also commended themselves to the case. The proposals moreover satisfactorily the needs of the Council as likely to meet had the advantage that they would secure the appointment of an Organising Medical Secretary for South Africa. In connection with the question of a possible appointment of that kind, the Council had, in February, 1924, been prepared to grant a sum of £1,000 a year for three years on condition that the members of the Association in South Africa found the balance and that a suitable secretary could be found. There were, as matters then stood, various difficulties in the way of the appointment of such an official, and the Council therefore, in October, 1924, at the request of the South African Committee, decided that that offer should be kept open for a year. The Council regarded the new application of the Federal Council for assistance as coming within the spirit of its decision of February, 1924, and after reviewing all the circumstances of the case decided to make a grant of £1,000 a year for two years, namely, for 1927 and 1928.

The Council has very great pleasure in reporting that the first number of "The Journal of the Medical Association of South Africa (British Medical Association)" was published under the joint editorship of Drs. W. Darley-Hartley and C. L. Leipoldt on January 8th, 1927, and that there has been a gratifying increase in membership throughout the Union of South Africa. Mention should be made of the handsome gift made by the private proprietors of the "Medical Journal of South Africa" who presented that journal with its assets valued at £2,000 to the Federal Council.

56. The home Association and its ramifications throughout the world will join in congratulating our South African colleagues on the great progress they are making, and especially on the fact that they have found that this can best be done as a part of the one great medical Association of the Empire.

Incorporation of Queensland Branch.

57. The Council has pleasure in reporting the completion of the incorporation of the Queensland Branch, and has conveyed to the Branch its good wishes for the success of the Branch under its new constitution.

Newly Qualified Practitioners.

58. The Council has pleasure in reporting that practically all those Divisions and Branches whose areas contain medical schools have taken very successful action in connection with the scheme recently inaugurated by the Council for interesting final-year medical students and newly qualified medical practitioners in the work of the Association. One result of these gratifying activities is seen in the increased membership of the Association, especially among the newly qualified.

59. The second edition of the "Handbook for Recently Qualified Medical Practitioners" was published in April, 1926. The new edition has met with an even greater response than the first edition, 2,000 copies having already been disposed of. The Handbook has been presented to those attending the meetings of welcome to the entrants to the profession, organised by the Divisions and Branches, and constitutes a very valuable part of the Association's propaganda among the newly qualified and other practitioners.

New Divisions of the Association.

60. The Council has formed new Ashford, Dover, Folkestone, Rugby, and Tyrone Divisions, and has adjusted the areas of many other Divisions and Branches in order to meet the convenience of members and make the work of the Association on their behalf still more effective.

Constituencies for Election of Representative Body, 1927-28.

Divisions in British Isles.

61. The Council has, subject to one or two adjustments, repeated the 1926-27 grouping of the Divisions in the British Isles for election of the Representative Body, 1927-28.

Divisions outside British Isles.

62. Each Division and Division-Branch outside the British Isles has been made an independent constituency.

Groups of Branches for Election of Council, 1927-28.

Bodies in British Isles.

63. Pursuant to the standing authority conferred upon it by the Representative Body, the Council has grouped the Branches and Constituencies in the British Isles respectively for election of the "24" and "12" members of the Council for 1927-28 in the same way as for 1926-27.

Bodies outside British Isles.

64. The Branches outside the British Isles have been grouped for election of the "7" members of Council, 1927-28, in the same way as for 1926-27.

Central Lectures on Public Health Topics.

65. As an extension of the practice of the Association whereby public lectures are delivered at its Annual Meetings, the Council organised, as an experiment, a "Hastings Lecture" in the Great Hall of the Association on a topic of public health interest to which the public were invited.

66. The lecture was given by Sir Berkeley Moynihan, P.R.C.S., who took as his subject "Cancer and how to fight it," and the meeting was presided over by the Minister of Health, Mr. Neville Chamberlain. The attendance was very satisfactory and the press notices both before and after the Lecture were both numerous and complimentary. The Council has, on behalf of the Association, conveyed to Sir Berkeley Moynihan and Mr. Chamberlain its thanks. The Council will consider whether further lectures of a similar kind should be given.

"British Medical Journal."

Circulation and Advertisement Revenue.

67. The circulation and revenue of the *British Medical Journal* have again far surpassed all previous records. The steady growth in circulation is shown by the following figures, which give the average number of copies printed weekly during the eight years since the armistice: 24,520 in 1919; 26,195 in 1920; 27,247 in 1921; 27,600 in 1922; 29,036 in 1923; 31,339 in 1924; 33,530 in 1925; and 35,920 in 1926. Advertisements and circulation usually bear a close relationship, and there is the best possible evidence of the increasing value set upon the *British Medical Journal* as an advertising medium. The income from advertisements last year was £46,369, as compared with £43,480 in 1925; £39,437 in 1924; and £38,318 in 1923. It is worthy of note that the advertisement revenue for 1926 was nearly twice that for 1914, when the pages of advertisements were much more numerous and the rates much lower.

Size of Journal.

68. The weekly average number of pages of the *British Medical Journal* in 1926 was 115·8, distributed as follows:—Journal, Epitome, and Supplement, 61; advertisements, 54·8. This figure 115·8 is higher than that for 1925, and considerably higher than the average for any year since the beginning of the war. In 1926 the total pages of text and of advertisements was 5,876 (fifty-one issues), as compared with 5,884 in 1925 (fifty-two issues); these figures do not include the half-yearly indexes nor special plates printed on art paper. The growth in size of the *Journal* during the past ten years, made necessary by increasing calls on its space, many of them due to new activities of the Association, is shown by the following figures: in 1917 the total number of pages of text, including Supplement but excluding advertisements, was 2,100; in 1926 the total was 3,080.

Publication of Reports.

69. Publication of the proceedings at the Annual Meeting at Nottingham, including full reports of the twelve Sections, occupied 284½ pages; the reports of the Presidential Address, proceedings of the Annual Representative Meeting, the statutory Annual General Meeting, and the various conferences held at Nottingham, occupied 65¾ pages; this making in all, 350 pages. Publication of the full reports of the scientific Sections was once again completed in the last issue of December. Apart from the two Annual Meeting issues of the *Supplement*, those which contained the Annual and Supplementary Reports of Council, the annual report of the Insurance Acts Committee, and the report of the Annual Panel Conference, were exceptionally large. The *Supplement* of July 3rd, consisting of 24 pages, was devoted to the first report of the Association's Special Sub-Committee of Inquiry into Rheumatic Heart Disease in Children. In accordance with custom no Epitome or Supplement appeared with the Educational Number published on September 4th. A considerable amount of space in the body of the *Journal* was again devoted to British Medical Association lectures and papers of scientific and practical interest read to the Divisions and Branches of the Association. On several occasions the *Epitome of Current Medical Literature* was enlarged to six pages, when the other demands upon space made this practicable, and in these issues a wider range of topics was covered.

Illustrations.

70. During the year, 12 special plates were issued for the reproduction of illustrations which would not have given good results if printed in the text on the ordinary paper by rotary machines. One of these art-paper plates was in colours, and another was a double sheet of four pages. A very large number of figures, executed in line or half-tone, were printed in the text, and the general standard of reproduction of these blocks has been improved. Altogether, 528 illustrative blocks were engraved in 1926, against 512 in the previous year. An additional mechanical type-setting machine, making five linotypes in all, was set up in the composing room at Tavistock Square, for the printing of display advertisements, at a cost of £1,175.

Effect of the General Strike.

71. Owing to the General Strike it was not possible to print the issue of the *Journal* for May 8th. It was therefore decided to publish one issue for that week and the following week, bearing the double date "May 8th and 15th, 1926," with the result that fifty-one instead of fifty-two issues appeared last year. The material was in course of preparation for printing when the strike stopped all work at the machine printers' office (where the *Journal* is printed on rotary presses) on the morning of May 4th, and work was not

resumed there until the afternoon of May 17th. The compositors in the Association's Printing Department at Tavistock Square (where the type for the *Journal* is set) were called out by their trade union on May 6th, and returned to duty on May 13th.

MSS. AND BOOKS.

72. In the twelve months under review a very large number of original articles and addresses, and medical, surgical and obstetrical memoranda were submitted to the Editor for publication in addition to those from the Annual Meeting to which reference has already been made. Of this large number space was found for the inclusion of 445 in all—188 original articles, 98 Annual Meeting papers, and 159 clinical memoranda. The number of books received from publishers for review was 869, and notices of 519 books appeared.

COST OF PRODUCTION AND DISTRIBUTION.

73. It will be seen from the Journal Account published in the annual Financial Statement that the gross cost of production and distribution of the *British Medical Journal*, including all editorial and a proportion of the managerial expenses, was £66,687 in 1926. Receipts from advertisements, sales to non-members, etc., amounted to £53,207; so that the net cost of the *Journal* to members of the Association was £13,480 or 8s. 4d. a head for the whole year, including postage. Thus, while the gross cost of producing a single copy of the *Journal* and supplying it to a member was practically 9d., the net cost to him was approximately 2d.; to a non-member in Great Britain or Ireland the price of a single copy, including postage, was 1s. 4½d. Sales of *Journals* to non-members yielded £6,264. The charge for postage of the *Journal* forms a very heavy item of the total expenditure on the *Journal*. It amounted to £12,049 in 1926, as compared with £11,836 in 1925; £10,635 in 1924; £9,724 in 1923; £8,904 in 1922; and £7,261 in 1921. The increase in postage costs is due mainly to the continued growth in membership, and partly to the growth in size and weight of the *Journals* posted.

CENSORSHIP OF ADVERTISEMENTS.

74. Strict supervision has been maintained over advertisements tendered for publication in the *British Medical Journal*, and during 1926 it was found necessary to exclude many which did not conform to the policy and requirements of the Association. This censorship entails a considerable loss of revenue. The immediate loss is known, but the consequential loss, due to withdrawal of further advertising matter from the same quarters, cannot be calculated. Nevertheless, costly as it may be in terms of money, this policy of excluding undesirable advertisements from its official organ is a duty the Association owes to its members and through them to the public. While the acceptance of an advertisement for publication in the *Journal* is not to be understood as recommending or guaranteeing the article advertised, yet the appearance of an advertisement indicates that no objection of principle has been taken to it. The enterprise and ingenuity of some would-be advertisers is often such that the task of deciding whether their advertisements are admissible is far from easy. All new advertisements tendered for publication are scrutinised in the Finance and Medical Departments of the Association, and those considered prima facie to be misleading or otherwise objectionable are referred for further inquiry and consultation. The Council has laid down rules governing the acceptance and refusal of advertisements in general, but the application of these rules in particular cases tends to become more difficult. A detailed statement of advertisements suspended or refused, and of the grounds for the action taken, is presented to every meeting of the Journal Committee, when the circumstances of each case are reviewed. The Medical Department reports to the Committee on the results of excluding advertisements of medical posts at a lower salary than that approved by the Association. These results satisfy the Committee that the carrying out of this policy often has the effect intended by the Association. The Committee reappointed the Foods and Drugs (Advertisements) Sub-Committee to advise its Chairman in regard to doubtful advertisements of pharmaceutical and dietetic preparations. The claims made for particular substances have been reported on by pharmacological and analytical experts.

"ARCHIVES OF DISEASE IN CHILDHOOD."

75. As stated in the report of Council last year, the Council decided, in response to representations made by many members of the Association interested in diseases of children, to issue a periodical which would worthily represent the British school by presenting the investigations and conclusions, clinical and pathological, of all its workers. In order that the plan should be worthily carried out the Council appointed a General Committee, representative of all parts of Great Britain, with Dr. Hugh Thursfield and Dr. Reginald Miller as editors. They are assisted by a small Editorial Committee of practitioners particularly interested in the subject and resident in London, Liverpool, Edinburgh and Glasgow. The premature death of Dr. Thomson, of Edinburgh, has deprived the editors of his skilled and unselfish services. The first number of the *Archives of Disease in Childhood* was issued in February, 1926, and the first volume was completed by the sixth issue in December last. In the papers published the editors have achieved and maintained a very high standard. Its appeal is worldwide, for it is addressed to all those at home and abroad, in every sphere of work, who realise the importance to medicine and the race of this rapidly growing department. The bulk of the work presented in the past year has of necessity dealt rather with the medical and pathological than with the surgical aspects of Disease in Childhood, for the surgery of childhood, with certain exceptions, is not differentiated from that of the adult. The editors would welcome further papers dealing with surgery. The *Archives* appear six times a year, and the subscription (25s. post free) is payable to the Financial Secretary, British Medical Association, Tavistock Square, London, W.C. 1. The subscription for Canada and the United States is six dollars (post free). The price of single numbers is 4s. 6d.

"JOURNAL OF NEUROLOGY AND PSYCHOPATHOLOGY."

76. Early last year an application was received by the British Medical Association to take over the publication of the *Journal of Neurology and Psychopathology*, then in its sixth volume. From the first number of the seventh volume (July, 1926), the journal has been issued by the British Medical Association. The aim of the *Journal of Neurology* is to supply up-to-date information on the subjects named in its title. This it does by publishing short original articles, editorial articles, and a series of abstracts and critical reviews. With this programme it fills a place which no other periodical published in English exactly occupies. It is edited by Dr. S. A. Kinnier Wilson, with the assistance of an Editorial Committee, mainly British, all of whom are members of the British Medical Association. It is published quarterly, and the subscription is 30s. a year, payable to the Financial Secretary, British Medical Association, Tavistock Square, London, W.C. 1. The price of a single number is 8s. 6d. (post free).

Science.

SCIENTIFIC WORK OF ANNUAL MEETING, 1927.

77. The Council has arranged the following Sections for the forthcoming Annual Meeting at Edinburgh. *Three-day Sections*: Medicine, Surgery, Obstetrics and Gynæcology, Pathology and Bacteriology (one day combined with Comparative Medicine), Therapeutics and Pharmacology, Diseases of Children, Mental Diseases (one day combined with Neurology). *Two-day Sections*: Neurology (one day combined with Mental Diseases), Ophthalmology, Laryngology and Otology, Preventive Medicine, Physiology and Biochemistry, Comparative Medicine (one day combined with Pathology and Bacteriology). *One-day Sections*: Dermatology, Tropical Diseases, Forensic Medicine, Tuberculosis, Venereal Diseases, Radiology, History of Medicine, Medical Sociology.

THE ASSOCIATION'S SCHOLARS AND GRANTEES.

78. The annual sum granted by the Council for the direct encouragement of original investigation and research exceeds £1,100. The following are the awards made for the period 1926-27:—

Ernest Hart Memorial Scholarship.

Claude H. Whittle (Cambridge)	The pathology and epidemiology of pneumonia and pneumococcal infections.

Ordinary Research Scholarships.

Helen M. M. Mackay (London) (2nd year)	Secondary (alimentary) anæmia in infancy and ultra-violet light treatment.
Percy C. Raiment (Oxford) (2nd year)	The significance of the changes of the inorganic radicles of the blood in cases of chronic rheumatism, gout and allied diseases.
William C. Wilson (Edinburgh)	Injury and disease of the thoracic organs, in order to elucidate the mechanical and pathological factory involved, and to assess the value of treatment by surgical measures.

Research Grants.

N. L. Capener (London), £25; Winifred C. Callis (London), £10; L. S. Davidson (Cambridge), £25; W. S. Duke-Elder (London), £70; E. G. Holmes (Cambridge), £50; H. W. Jones and R. E. Roberts (Liverpool), £40; Mary F. L. Keene (London), £10;

A. P. Mitchell (Edinburgh), £25; G. H. Drummond Robinson (Cambridge), £20; E. F. Skinner (Sheffield), £20; N. Ross Smith (London) £25; H. H. Woollard (London), £30.

Work of the Scholars and Grantees.

79. Satisfactory work was carried out by the Scholars and Grantees for 1925-6, the results in several cases being communicated to various scientific societies. The Council is grateful to the following gentlemen who reviewed the work done by the Scholars and Grantees:—Prof. W. E. Dixon, Sir David Drummond, Prof. G. E. Gask, Prof. J. B. Leathes, and Prof. J. Lorrain Smith.

ENQUIRY INTO RHEUMATIC HEART DISEASE IN CHILDREN.

80. Arising out of a recommendation of the Section of Medicine of the Portsmouth Meeting, 1923, the Science Committee appointed a Special Sub-Committee of Enquiry into Rheumatic Heart Disease in Children under the chairmanship of Sir Humphry Rolleston. The first Report of the Sub-Committee appeared in the *B.M.J.* Supplement of July 3rd, 1926. It embodied researches conducted over a considerable period and has been widely recognised as a valuable contribution to the subject. The Sub-Committee was re-appointed to advise on the rheumatism problem generally and its second Report on the Prevention and Control of Rheumatic Infection in Children was published in the *British Medical Journal*, April 16th, 1927. The Council has had much pleasure in placing on record its appreciation of the work of the Sub-Committee.

The Council has made a special grant of £100 in aid of a scheme of investigation, which is being carried out with the approval of the Sub-Committee under the direction of Dr. Reginald Miller at the Rheumatism Supervisory Centre at Paddington Green Children's Hospital.

B.M.A. LECTURES.

81. The system of B.M.A. Lectures to Divisions and Branches continues to be appreciated, and the Council has set apart £400 to meet the demand for these lectures in 1927.

The following have given Lectures during the past year:—Dr. J. D. Barris, Mr. W. Rowley Bristow, Dr. R. M. Bronte (2), Dr. S. Cameron, Dr. T. F. Cotton, Prof. W. E. Dixon, Dr. T. Watts Eden, Dr. Herbert French (2), Prof. G. E. Gask, Dr. T. D. Greenlees, Mr. N. Bishop Harman, Prof. John Hay, Prof. W. E. Hume, Dr. Robert Hutchison (2), Dr. R. Jewesbury, Dr. G. J. Langley (2), Prof. D. M. Lyon, Prof. E. Mellanby, Dr. Reginald Miller, Prof. F. Craven Moore, Mr. C. A. R. Nitch, Prof. Miles Phillips, Dr. F. W Price, Sir James Purves-Stewart, Mr. H. S. Souttar, Dr. T. Grainger Stewart, Dr. G. F. Still, Prof. Ralph Stockman, Dr. H. Letheby Tidy, Prof. D. P. Wilkie.

THE LIBRARY.

82. In conformity with Minute 55 of the A.R.M. 1926, the Council has amended paragraph 4 of the Library Rules to read—

"4. A member shall be entitled to retain a book borrowed from the Library for a period of twenty-eight days unless the book be accompanied by a notification from the Librarian that it must be returned at the expiration of 14 days . . ."

and in order to promote the greater use of the Library, to lessen the trouble of application and slightly to diminish the cost, paragraph 2 of the Library Rules has been amended as follows:—

"2. Application for any book to be sent post free may be made in writing on a special post-card form. These forms may be obtained from the Librarian on the payment of 5s. for 12. *Applications* not on these forms must each be accompanied by a remittance of 6d. per volume towards the cost of postage and packing."

The number of books borrowed from the Library during the years 1922-26 has been respectively as follows:—

1922	...	3,700
1923	..	4,800
1924	...	7,200
1925	...	7,300 (during 1925 Library was closed for several weeks).
1926	...	9,810

It will greatly expedite the issue of volumes from the Library, if members will promptly return books in accordance with Rule 4 (see above). The Council appeals to members for loyal co-operation in this matter. It may seem ungracious to remind members of the penalties prescribed for breach of the Rules, but when volumes are improperly detained the delay is to the prejudice and disadvantage of other readers.

The Council again acknowledges the valuable services rendered by the Honorary Librarian, Mr. W. G. Spencer.

THE "BRITISH PHARMACOPŒIA."

83. The Council in its Report for 1926 stated that the Association had been invited to send representatives to a Conference of scientific bodies with the Pharmacopœia Committee of the General Medical Council, concerning the method of preparation of the British Pharmacopœia. Following upon that Conference, the Lord President of the Council was moved by the General Medical Council to remit the question for consideration by the Committee of Civil Research, and a Sub-Committee of that body invited the Association to place its views before the Sub-Committee. The Council accordingly submitted the memorandum of evidence which appears in Appendix IV., and Dr. J. W. Bone and the Deputy Medical Secretary (Dr. G. C. Anderson) gave oral evidence before the Sub-Committee.

84. The Council has, at the request of the Sub-Committee of Civil Research, made enquiries of the various governing bodies of the Association overseas, and of the Canadian Medical Association as to:—

1. The best method of adapting the British Pharmacopœia to Imperial uses;

2. The manner in which the Dominions and Colonies could with this object co-operate to the best advantage in the preparation of the British Pharmacopœia;

3. The utility of the present Pharmacopœia;

4. Any improvements that might be effected so as to render the Pharmacopœia more useful;

5. The inclusion of substances or preparations in use daily in tropical climates or restricted parts of the Empire in (a) a separate volume, (b) an addendum, or (c) in the body of the Pharmacopœia itself.

The replies were prompt and have been most useful. They have been communicated to the Sub-Committee of Civil Research.

STEWART PRIZE.

85. The Council has decided to award the Stewart Prize to Sir Malcolm Watson, M.D., LL.D., in recognition of the scientific and administrative work that has freed large tracts of tropical Malaya from malaria, and has proved of high service both to preventive medicine and to economic developments. The Prize will take the form of an Illuminated Certificate and a cheque for £50.

Sir Malcolm Watson has spent many years in the Federated Malay States, and has devoted himself with great zeal to the study of malaria and other diseases prevalent in tropical latitudes. He is the author of two books of recognised authority and value, namely, "Rural Sanitation in the Tropics," and "The Prevention of Malaria in the Federated Malay States." The practical value of his work, both in the prevention of disease and in relation to commercial interests, has been recognised by the Government, and his academic studies have gained for him an honorary degree (LL.D.) from his *Alma Mater*.

THE SIR CHARLES HASTINGS CLINICAL PRIZE.

86. The Sir Charles Hastings Clinical Prize consisting of an Illuminated Certificate and a cheque for 50 guineas, which was established by the Council for the promotion of systematic observation, research and record in general practice, has been awarded in respect of the year 1927 to Dr. John Sinclair Manson, Warrington, for his clinical study entitled "Observations on Human Heredity."

The clinical study submitted by Dr. James Alston, Edinburgh, showed exceptional merit and the Council has awarded to him the distinction of Honourable Mention.

The 10 clinical studies submitted for the Prize showed much careful work and observation. They were examined by Prof. W. E. Dixon and Sir Humphry Rolleston to whom the Council is much indebted for this further service.

The Council proposes to offer the Prize for competition in 1928 under the existing Regulations.

THE NEED FOR THE USE OF DOGS IN PHYSIOLOGICAL AND THERAPEUTIC EXPERIMENTS.

87. On several occasions the Association in co-operation with other organisations has taken an active part in opposition to Bills promoted in Parliament with the intention of suppressing, or of limiting in some special direction, the practice of research by experiments on animals. Such a Bill (Dogs Protection Bill) has recently been read a first time in the House of Commons, and were it to become law the progress of research in this country would be seriously hampered. An energetic campaign in support of the Bill is being conducted, and in these circumstances the Council has felt it a duty to try to inform both public and

Parliamentary opinion, and to expose some of the misrepresentations by which the case for the Bill is being supported. The following steps have been taken :—

(a) A reasoned statement as to the need for the use of dogs in physiological and therapeutic experiments was prepared by the Science Committee and published in the *B.M.J.* on December 4th, 1926.

(b) In response to several requests the Council convened on April 4th a Conference of representatives of medical and other scientific organisations. The Conference, which was of a most representative character, unanimously adopted the following resolutions :—

> That this Conference, believing that any withdrawal or curtailment of the powers at present granted under license and inspection will hinder medical research to the detriment of the health and well-being of the community, wishes to enter a strong protest against any Bill which has for its object further restrictions upon experimental work on dogs or other animals;
>
> That this Conference is of opinion that the existing law should be altered so as to permit, under proper provision for the prevention of pain and for efficient inspection and control, the use, for purposes of research, of some of the numerous stray and unowned dogs now taken up by the police and condemned to the lethal chamber, thus ensuring conditions which are essential to progress in physiological knowledge and to the application of this knowledge to the practice of medicine;

and directed that a copy of the resolutions be sent to the Prime Minister and to the Home Secretary, together with a note of the names of those present at the Conference and of the bodies they severally represented. A full report of the Conference was published in the *B.M.J.* Supplement of April 9th, 1927.

(c) The Council has organised a Petition to Parliament in opposition to the Dogs Protection Bill, and steps are being taken to secure the signatures of all medical members of University staffs, medical schools and teaching hospitals (including post-graduate hospitals). The response has been excellent. The Petition is as follows :—

> Your Petitioners, medical members of university staffs, medical schools, and teaching hospitals in Great Britain and Northern Ireland, pray that your honourable House will not support any Bill which has for its object further restrictions upon experimental work on dogs or other animals, believing that any withdrawal or curtailment of the powers at present granted under licence will hinder medical research to the detriment of the health and well-being of the community.
>
> Further, your Petitioners would pray that you will endeavour to secure such an alteration in the existing law as will permit, under proper provision for the prevention of pain and for efficient inspection and control, the use, for purposes of research, of some of the numerous stray and unowned dogs now taken up by the police and condemned to the lethal chamber, thus ensuring conditions which are essential to progress in physiological knowledge and to the application of this knowledge to the practice of medicine.

(d) The Council has urged Branches and Divisions to press upon the attention of Members of Parliament the prejudice to medical knowledge and the public interest which must follow interference with experimental research. Many Divisions are known to have taken action and it is hoped that the rest will follow suit.

PATHOLOGY.

88. In view (i) of complaints by members of the Association that the advertisements of various pathological institutes in the *British Medical Journal* are unfair to the private practitioner of pathology, and (ii.) of proposals submitted to the Council relative to commercial pathological laboratories and laboratories of public health authorities, the Council has considered the whole situation.

Some General Propositions.

89. The Council adopted the following general propositions :—

(a) That in the interests of medicine and of medical practice the status and professional values of the private practitioner of pathology should be more generally recognised;

(b) That the practice of clinical pathology should be conducted in accordance with the professional customs and ethical principles that govern other specialised departments of medical practice;

(c) That so far as possible, and this especially in difficult and obscure cases, the pathologist and the practitioner in charge of the patient should meet in consultation;

(d) That a practitioner engaged in private practice as a pathologist is at liberty to notify the fact, together with his professional address, to medical practitioners within the area of his practice;

(e) That in no circumstances should a pathological report be furnished to any person other than a qualified medical practitioner.

The Pathologist as Consultant.

90. The Council has carefully considered the representations submitted by various private and hospital pathologists. It is convinced that in the interests of medicine and of medical practice the status and professional values of the private practitioner of pathology should be more generally recognised. The desirable position is that the expert pathologist should occupy in medical practice a position comparable to that held by experts in other specialised departments of medicine. He should, that is, in consultation with the practitioner in charge of the case, add his contribution to the diagnostic scheme. In many instances, indeed, it is only by this personal association of the pathologist and the clinician that the facts determined in the laboratory can be made to render a maximum service to the problems of clinical practice. This proposition may well be emphasised by those immediately concerned, and it is open to the pathologist, as it is to experts in other specialised departments, to announce by legitimate means his ability to make a particular contribution to the various aspects of medical science and practice. Through the agency of medical journals, of lectures and of local medical societies and discussions, he has, even as others, the means of claiming his place in the professional brotherhood and of educating his fellows in the value of the subject of his choice. Further, in commencing practice, and in accordance with a pleasing custom, he has the right to introduce himself to his professional neighbours and to intimate to them the form of work which he proposes to cultivate. Unquestionably the desirable arrangement is one, not of independence and detachment but of co-operation. Laboratory tests, like other observations, need to be brought into comparison with the clinical record. In any event, the Council feels justified in assuring the writers of various memoranda submitted to it that the Association will through its *Journal* and by other agencies continue to emphasise the position of laboratory tests as aids to diagnosis and treatment, and to recognise that such tests are of special value when their application rests on a known individual guarantee and when the results are placed by personal consultation in their due order and perspective.

Advertisements of Pathological Institutes.

91. One of the complaints advanced by the private pathologist is that advertisements of pathological institutes and laboratories in the *British Medical Journal* are allowed, while ethical custom forbids such advertisements to individuals. There is here obviously some inequality of opportunity, and though not prepared to advise the summary exclusion of these advertisements, the Council is of opinion that in some respects they require supervision. The Council has therefore defined the conditions under which such advertisements may be allowed in the *British Medical Journal* as follows :—

> (i.) That the offer of the advertisement is accompanied by a guarantee from some responsible person that the work of the laboratory is conducted by a registered medical practitioner whose name must be supplied to the office, and
>
> (ii.) that the advertisement quotes no tariff or fees.

92. Advertisement by postal circulars to members of the profession raises a more difficult issue. The custom has long been cultivated without open objection, and, seeing that there are certainly some parts of the country where local pathological facilities are not at hand, an intimation of the addresses of available laboratories must be admitted to be convenient or even necessary. The Council is of opinion that if and when such intimations are issued they should in all cases bear the name of the registered medical practitioner responsible for the work of the laboratory, and that each report issued from the laboratory should be guaranteed in like fashion. Again, any announcement by postal circular should cultivate the characters of a professional intimation rather than those of a commercial advertisement, and certainly anything of the nature of a fee-cutting competition ought to be regarded as utterly undignified and unworthy. To meet the position further, the Council sees no objection to

the private practitioner of pathology announcing the existence of his laboratory to the practitioners in the area in which he practises, provided such announcement is on professional and not on commercial lines. If, as the Council strongly urges, it is in the interests both of medicine and of the public that the individual practising pathologist with opportunities for personal consultation should be widely available, some reasonable method for the announcement of what in many districts must be a new development ought to be allowed, it being of course understood that due regard be paid to professional custom and tradition.

Pathological Institutes and the Public Health.

93. The Council has received various criticisms adverse to the work of certain private institutional laboratories. Into these, however, it has not felt itself called on to enter. Broadly, individualism in laboratory work can claim the special advantage of personal responsibility and guarantee and of the opportunity for consultation and discussion, as compared with what may be called mass production or a simple affirmative or negative verdict. The private pathologist may also claim that in relation to the area in which he practises he is able to afford a prompt service and to avoid those risks of deterioration or change which may seriously affect certain specimens during their transit through the post.

94. Yet on economic grounds, other reasons apart, the organised pathological institute is likely to continue to exist, for certain laboratory tests when applied to numerous specimens at one and the same time can be conducted at a cost which is trifling as compared with the application of the same tests to individual specimens. To secure this advantage the laboratory must collect its specimens from a large area, and such geographical, and consequent economic pressure comes particularly into operation when—and this is a growing quantity—laboratory work is undertaken for public health authorities and is financed at the public charge. The private practitioner working in a limited area is here clearly at a disadvantage, and at the same time he cannot but feel the effect of the low level of the fees accepted by the laboratory working for the public health authority. He may hope by a high standard of personal and professional efficiency and responsibility to win a recognised position in the consulting ranks of the profession, but the routine and simpler tests and the investigations required by public health authorities are likely to continue to find their main application in the organised pathological institute. This statement may be partially qualified by the possibility that medical practitioners in increasing measure may cultivate laboratory methods for themselves.

Varieties of Pathological Institutes.

95. The Council has learned the necessity of recognising certain differences of professional quality between various classes of pathological institutes advertised in the medical journals or elsewhere. In some instances the institute is obviously a form of advertisement cultivated by a commercial firm for the sake of drawing the attention of the profession to the firm's goods or products; and cheap fees are charged in order to render the advertisement more effective. The Council considers this practice most objectionable, as it makes a scheme of medical work and responsibility subordinate to a purely financial end. Further, if such a practice is legitimate in reference to pathology, there would seem to be no consistent objection to its application in other directions, and thus a commercial firm might among its advertising activities offer the opportunities of a cheap X-ray department or the consultant services of a physician, surgeon or other expert. The Council is of opinion that the Association should endeavour to discourage its members from any association with pathological institutes of this order.

Other organisations advertised as pathological institutes or under some allied term are, there is reason to believe, the property either of an individual medical practitioner or of a group of practitioners or of a limited liability company.

96. Again, the laboratories of hospitals and of medical schools are utilised as a source of information by private practitioners. Strictly speaking such laboratories should undertake examinations needed for hospital patients only. But it is not unnatural that practitioners should prefer reports, even for non-hospital cases, from a pathologist attached to the school where they have been students. In any such arrangement the relation should be a personal one between the practitioner and the pathologist as consultant, rather than between the practitioner and the hospital. Where a pathologist attached to a hospital or medical school undertaking pathological work as a general service does such work for persons able to pay fees, the fees paid for such examinations (subject to such charge for the use of the laboratory as may be arranged) should, the Council considers, be the property of the pathologist and should be a matter of private arrangement between the pathologist and the persons for whom the examinations are made.

The Council recommends:—

Recommendation: That the Representative Body disapproves of the establishment by trading firms of laboratories as subsidiary enterprises for the purpose of offering pathological examinations and reports on individual cases, and advises members of the Association to avoid any association with such enterprises.

Recommendation: That in the opinion of the Representative Body all institutions undertaking pathological examinations and reports should include in any intimation made to the profession the name of the registered medical practitioner in charge of the laboratory, and that each report issued from the laboratory should be guaranteed by the personal signature in writing either of this practitioner or of some other registered medical practitioner approved by him.

Recommendation: That in the opinion of the Representative Body, public health authorities should neither provide for pathological examinations nor furnish pathological reports on individual cases, except (i.) in cases which directly involve questions of public health, or (ii.) where provision is made for such reports by statutory right, or (iii.) when the patient is stated by the practitioner to be, in his opinion, unable to pay a fee.

Recommendation: That where a pathologist attached to a hospital or medical school undertaking pathological work as a general service does such work for persons able to pay fees, the fees paid for such examinations (subject to such charge for the use of the laboratory as may be arranged) should be the property of the pathologist and should be a matter of private arrangement between the pathologist and the person for whom the examinations are made.

Medical Ethics.

ADVERTISEMENTS OF THERAPEUTIC INSTITUTIONS IN THE MEDICAL PRESS.

97. The A.R.M., 1924, passed the following resolution on the question of advertisements of therapeutic institutions in the medical press:—

Minute 151.—Resolved: That the advertisement in the medical press of institutions professing to provide medical advice and treatment is a practice free from objection, and such advertisements may include the names of the resident and attending medical officers.

It appears to the Council that, as a large number of advertisements of such institutions appearing week by week in the *British Medical Journal* contain particulars which are not free from objection, the above decision of the Representative Body should be amplified to meet the position.

The Council takes the view that it is sufficient to state in the advertisements the name or names of the medical officers of the institutions, with their qualifications, and that the inclusion of such particulars as the private address, consulting rooms or hours savours of personal advertisement of the practitioner concerned.

The Council recommends:—

Recommendation: That the Representative Body considers it undesirable that there should be inserted in the medical press or in other publications primarily intended for the medical profession any advertisement of a therapeutic institution which includes any laudatory statement of the form of treatment given, or the private address or the consulting rooms or hours of a member of the medical staff; but that there is no objection to the name and qualifications of medical officers of the institution being given.

PUBLICITY BY MEDICAL PRACTITIONERS: HIGH COURT ACTION BY THE ASSOCIATION.

98. From the various pronouncements made in the public press it would appear that the Association's attitude with regard to the publicity which is allowed to medical practitioners is still misunderstood. The policy of the Council in this matter is guided by paragraph 12 of the Report of the Central Ethical Committee on Indirect Methods of Advertising approved by the A.R.M., 1925, which was re-stated in the Annual Report of the Council, 1926 (*B.M.J.* Supplement, April 24th, 1926, page 144).

A commentary upon the Association's attitude in regard to publicity by doctors appeared in a certain London newspaper. The Association was advised by its solicitor that this commentary constituted a libel upon the Association

which would entitle it to redress. The newspaper in question having declined to publish an apology, the Council had no alternative but to institute proceedings against the printers and publishers of this newspaper, and the action is pending.

PREPARATION BY ASSOCIATION OF AN ETHICAL CODE.

99. The Council has considered the question of the publication by the Association of an Ethical Code. Having regard however to the ground covered by Section IV. of the Handbook for Recently Qualified Medical Practitioners dealing with "Some Practical Aspects of Medical Work," the Council is of opinion that that Section renders it unnecessary and undesirable for the Association to issue at present any other guide on ethical matters. The Council contemplates the extension of the Section from time to time in conformity with the various ethical pronouncements of the Association.

ADOPTION BY DIVISIONS AND BRANCHES OF RESOLUTIONS UNDER THEIR ETHICAL RULES *Re* THE SCALE OF MINIMUM COMMENCING SALARIES.

100. As a result of the decision of the A.R.M., 1926, urging those Divisions and Branches in England and Wales which had not adopted a resolution under their Ethical Rules in relation to the scale of minimum commencing salaries for whole-time public health appointments to take steps in this matter, many of the bodies concerned have taken the necessary action. The position to date is as follows:—

	Have adopted Resolution.	*Out of possible total of.*
Branches	17	26
Division Branches ...	3	3
Divisions	73	152

Those Branches and Divisions which have failed to adopt a Resolution are thereby depriving the profession, not necessarily only in their own area, of a powerful weapon of defence when public health appointments are offered at inadequate salaries. The Council, therefore, urges these Branches and Divisions to take action in this matter at the earliest possible opportunity.

ETHICAL RULES.

101. In pursuance of the standing instruction of the Representative Body the Council reports that the following bodies in Great Britain have still not adopted the Revised Ethical Rules:—*Divisions:* Argyllshire, Chester, Crewe, Dumbartonshire, Durham, Edinburgh and Leith, Halifax, Islands, Leigh, Ross and Cromarty, Salford, Wandsworth, *Branches:* East York and North Lincoln, Edinburgh.

Medico-Political.

CORONERS' AMENDMENT ACT, 1926.

102. Although this Act has not given full effect to the aims of the Association as laid down by the Representative Body in 1925, it has improved by 50 per cent. the fees paid to medical witnesses, and has introduced a fee of 10s. 6d. for a report by a practitioner who, having conducted a post-mortem (at the request of a Coroner), has supplied the Coroner with a report and has not been called upon to give evidence. Practitioners will in future receive a fee for each attendance at adjourned inquests and not, as in the past, one fee to cover all attendances at an inquest.

The full list of fees for medical practitioners, as from 1st May, 1927, will be governed by the following provisions of the Act:—

(a) for attending to give evidence at any inquest whereat no post-mortem examination has been made by the practitioner, one-and-a half guineas for each day on which he is required to attend; and

(b) for making a post-mortem examination of the body of the deceased and reporting the result thereof to the coroner without attending to give evidence at an inquest, two guineas; and

(c) for making a post-mortem examination of the body of the deceased (including the making of a report, if any, of the result thereof to the coroner) and for attending to give evidence at an inquest on the body, three guineas for the first day and one-and-a-half guineas for each subsequent day on which the practitioner is required to attend.

In relation to this matter the following resolution was passed by the Representative Body, 1926:—

Minute 108.—Resolved: That the Representative Body is of opinion that all medical officers—honorary or otherwise—of hospitals or rate-aided institutions be entitled to receive fees on the same scale as other practitioners for post-mortem examinations and attendance as medical witnesses at inquests.

and the Council is pleased to be able to report that the Coroners' Amendment Act of 1926 has removed the long standing grievance referred to.

REGISTRATION OF MATERNITY AND NURSING HOMES.

103. The Representative Body, 1925, in Minutes 122 and 123 instructed the Council to oppose the Nursing Homes (Registration) Bill, 1925, and also any other Bill having reference to Nursing Homes based on similar principles. The "similar principles" were defined as (i) non-recognition of the local medical profession by the supervising authority; (ii) disclosures of private case-records to supervising authorities; and (iii) inclusion within the definition of a nursing home of premises which are under the control of a registered medical practitioner.

104. The Council did not succeed in getting this policy adopted in the Midwives and Maternity Homes Act, 1926, Section 5 of which provides a penalty for a person who after 1st January 1927 carries on a maternity home, unless that person is registered in respect of that home. This Act defines a maternity home as

> "any premises used or intended to be used for the reception of pregnant women or of women immediately after childbirth, but shall not include any hospital or other premises maintained or controlled by a Government Department or local authority, or by any other body of persons constituted by special Act of Parliament or incorporated by Royal Charter."

The Act, however, provides, in Section 11, that a Local Supervising Authority may grant exemption from registration in respect of

> "any hospital or other premises for the conduct of which a duly qualified medical practitioner resident therein is responsible or any hospital or institution not carried on for profit or not used mainly as a maternity home"; or
>
> "any hospital or institution not carried on for profit and not used *mainly as a maternity home*"

but the same section also provides that the local supervising authority may at any time withdraw an exemption granted thereunder.

Maternity Homes registered under this Act are liable to be inspected by an officer duly authorised by the local supervising authority, who may inspect any records. It is required that in registered maternity homes the certificate of registration shall be exhibited in a conspicuous place.

105. The Nursing Homes (Registration) Bill, read a second time in the House of Commons on 1st April, 1927, and remitted to a Standing Committee, provides (contrary to the policy of the Association referred to in para. 103) for the registration and inspection of all nursing homes whether or not under the control of a resident medical practitioner, and repeals the provision in the Midwives and Maternity Homes Act, 1926 (Part II.) empowering local supervising authorities to exempt from registration maternity homes under the control of a resident medical practitioner.

106. The Council, after due consideration, and on the strong advice of medical Members of Parliament, is of opinion that it would be detrimental to the interests of the public and of the profession for the Association any longer to attempt to secure exemption from registration and inspection of either nursing or maternity homes for which a resident medical practitioner is responsible.

107. The Council intends, however, taking parliamentary action in connection with the Nursing Homes Registration Bill, in furtherance of the rest of the Association's policy on this question.

LUNACY LAW AND ADMINISTRATION.

108. The Council has appointed a Special Committee to consider the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales) and to examine the recommendations of the Commission in relation to the evidence submitted on behalf of the Association.

The following resolution of the Representative Body, 1926, has been referred to this Committee:—

Minute 115.—Resolved: That the following Motion be referred to the Council:—

> That the Council be requested to take all necessary steps as soon as possible to deal with the situation that has arisen as a result of the findings of the jury in the "Harnett v. Fisher" case with the view of protecting the interests of the medical profession.

EXAMINATION AND REPORT ON NAVAL PERSONNEL AND PENSIONERS.

109. The scale of fees payable to medical practitioners for examination and report on Naval Personnel and Pensioners has, on the representations of the Association, been increased,

and the following revised scale has been issued by the Admiralty:—

	s.	d.
For examining a naval rating. For invaliding and reporting on form B. 145, and in the case of tuberculosis, M. 133 ... ... (old fee, 5s.)	7	6
For visiting and reporting on a naval rating sick on shore	5	0
For examining and reporting on an applicant for a grant from the Compassionate Fund ...	5	0
For examining and reporting on applicant for benefits for Greenwich Hospital	4	0
Re-survey of naval pensioner and report on form B. 145	4	0
For examining an applicant for compensation and report on D. 729	4	0
For examination for enrolment and re-enrolment in Royal Naval Reserve	4	0

Travelling expenses 1s. per mile, one way.

CENTRAL EMERGENCY FUND.

110. This Fund was created in 1905 with the object of assisting members of the Association to maintain the interests of the profession against organised bodies, and grants made from this Fund have been of great assistance in the past. The Fund is administered by the members of the Medico-Political Committee who act as trustees, and is entirely supported by voluntary contributions.

PRIVY COUNCIL COMMITTEE ON POISONS AND PHARMACY ACTS.

111. At the invitation of the Privy Council Committee on the Poisons and Pharmacy Acts, the evidence set out in Appendix V., was given before that Committee on behalf of the Association, on 4th March, 1927, oral evidence in support thereof being given by Dr. J. W. Bone, Mr. E. Lewis Lilley, and the Medical Secretary.

EXAMINATIONS UNDER SCHOOL TEACHERS (SUPERANNUATION) ACT, 1918.

112. As a result of action taken by the Council, medical practitioners should in future have no difficulty in obtaining a fee of 15s. for the examination of teachers submitting themselves for medical examination under the School Teachers (Superannuation) Act, 1918.

PUERPERAL MORBIDITY AND MORTALITY.

113. The enquiry into the causation of puerperal morbidity and mortality and on the administrative action, if any, that should be taken in connection with this matter is being continued, but the Council is not yet in a position to report thereon.

With a view to assisting in the consideration of this very important subject, information under the following heads, among others, has been sought but the response to the first has been very inadequate:—

(a) the experiences of individual practitioners and Lying-in Hospitals as to the incidence of puerperal fever and mortality; and

(b) the number of maternity beds available throughout the country.

The Puerperal Fever and Puerperal Pyrexia Regulations, 1926, which came into operation on 1st October, 1926, require the notification of cases of puerperal fever and puerperal pyrexia, and also provide that local authorities may, if the notifying doctor so desires, provide a second opinion, trained nurses, pathological examination of the lochia or blood, and hospital accommodation for the patient. This coincided with the previously expressed opinion of the Council.

The Council, being of opinion that it would be inadvisable for the Association to lay down a uniform fee which local authorities should pay to consultants for services rendered under these Regulations, has advised that the fee paid should bear relation to the usual consultation fees in the various areas, and should be arranged between representatives of the medical profession and the local authority.

DANGEROUS DRUGS TRIBUNALS.

114. The Representative Body, 1925 (Min. 192 (1)) approved a suggestion by the Government that a special medical tribunal should be set up consisting of three medical practitioners to be nominated by the General Medical Council, the British Medical Association and the Royal College of Physicians with a legal assessor, to consider charges against medical practitioners for offences under the Dangerous Drugs Act and to advise the Home Secretary as to the withdrawal of the authorisation to possess and supply the drugs and the right to prescribe them. Under the Dangerous Drugs Regulations, 1926, two such tribunals have been set up, one for England and one for Scotland and, in response to the invitation of the Home Office to nominate a member of each of these tribunals, together with two practitioners to act as substitutes in respect of each tribunal, the Council nominated Dr. J. W. Bone (Luton) for the English and Prof. T. K. Munro (Glasgow) for the Scottish Tribunal, with Dr. H. G. Dain and Dr. W. Paterson, and Dr. G. A. Allan and Dr. John Patrick, as substitutes for the nominees. These nominations have been adopted by the Home Office.

MEDICAL PRACTITIONERS ENGAGED IN MUNICIPAL MATERNITY HOSPITALS.

115. The Representative Body in 1926 adopted the following resolutions as "policy":—

Minute 88.—Resolved: That where the Local Authority makes provision for the institutional treatment of maternity cases, this should be mainly or primarily for serious cases of ante-natal complications, for cases requiring major obstetric operations, for cases where isolation and treatment of septic infection is specially indicated, and other cases where the home conditions are unsuitable or dangerous for confinements.

Minute 92.—Resolved: That where a general practitioner is called upon to render assistance at a confinement in a Municipal Maternity Hospital, the fees payable to such practitioner should not be less than the scale of fees approved by the Ministry of Health for the payment by Local Supervising Authorities to medical practitioners called in on the advice of midwives under Section 14 of the Midwives Act, 1918.

Minute 95.—Resolved: That where a consultant is called in by the practitioner in charge of the case the fee should be for the consultation not less than three guineas and for a major operation not less than ten guineas.

During the discussion of this matter by the Representative Body it was proposed (Min. 90) that the whole of the last clause of Minute 92 should be deleted and the following words substituted therefor:—

The Local Authority shall be responsible to such practitioner for his fees until such time as the patient is removed from the hospital.

The Council is, however, of opinion that it is not desirable that the responsibility of Local Authorities in regard to the payment of fees in respect of maternity cases should be extended beyond the present period of responsibility, namely four weeks, and accordingly recommends:—

Recommendation: That (with reference to Min. 90 of the A.R.M. 1926), inasmuch as the liability of Local Authorities for the payment of a medical practitioner called in on the advice of a midwife extends over a period of four weeks from the birth of the child, it is not desirable to suggest that the period of responsibility of Local Authorities should be extended.

116. The Representative Body, 1926, also passed the following resolution:—

Minute 97.—Resolved: That the question of consultative services for Municipal Hospitals on a salaried basis be referred to the Council.

In this connection the Council recommends:—

Recommendation:—That the principle of remuneration on a salaried basis for consultative services to municipal maternity hospitals is not unreasonable but that the actual salary must be governed by the circumstances of each particular case (*i.e.*, the amount of work required and the time occupied) and should bear some relation to the remuneration laid down in the following Minute 95 of the Annual Representative Meeting, 1926.—

Minute 95.—Resolved: That where a consultant is called in by the practitioner in charge of the case the fee should be for the consultation not less than three guineas and for a major operation not less than ten guineas.

ADMINISTRATION OF ANÆSTHETICS.

117. The Representative Body in 1910, in approving the evidence given on behalf of the Association before the Departmental Committee on Coroners Law, &c., approved *inter alia* the following:—

(1) That it should not be permissible for any person other than a registered medical practitioner or a registered dentist to administer any anæsthetic for medical or surgical purposes.

(2) That registered dentists should be permitted to administer nitrous oxide and local dental anæsthetics, but no other anæsthetics.

(3) That it is undesirable that any person should act both as operator and administrator in the same case where this

can be avoided, but it must be recognised that cases occur in practice, especially in sparsely populated districts, in which this responsibility must occasionally be undertaken.

As dentists now receive, as part of their training, instruction in the administration of anæsthetics the Council recommends that the policy as contained in the foregoing paragraphs should be amended to meet the present position.

Recommendation:—That the policy of the Association (as contained in the paragraphs relating to the administration of anæsthetics approved by the Representative Body in 1910, as part of the evidence given on behalf of the Association before the Departmental Committee on Coroners Law, &c.) be amended to read as follows:—

(1) That no person other than a registered medical practitioner should administer any anæsthetic for medical or surgical purposes, except that a registered dentist may administer anæsthetics for dental purposes only;

(2) That where a general anæsthetic is administered it is undesirable that any person should act both as operator and administrator in the same case where this can be avoided, but it must be recognised that cases occur in practice, especially in sparsely populated districts, in which this responsibility must occasionally be undertaken.

Remuneration of Medical Practitioners Administering Anæsthetics in connection with Dental Benefit under the National Health Insurance Acts.

118. Under the provisions which exist in the National Health Insurance Regulations for additional benefits, a number of Approved Societies are giving dental benefits to their members and a number of these societies, through the Dental Benefit Joint Committee (which is comprised of representatives of Approved Societies and dentists), have agreed to a scale of dental charges. The Council has informed the Ministry that the Association does not recognise this scale as applying to medical practitioners. The Council recommends the following scale of fees as applicable to medical practitioners for such services:—

Recommendation: That the fees for medical practitioners administering anæsthetics for dental operations (as an additional benefit under the National Health Insurance Acts), be as follows:—

(a) for the simple administration of nitrous oxide or a similar anæsthetic, 10s. 6d. if only one patient is dealt with, but if more than one patient is dealt with at the same time and place the fee should be 7s. 6d. per patient; and

(b) that for other administrations, whatever the anæsthetic, the fee should be one guinea.

Local Authorities and payment for Ante-Natal work.

119. The Representative Body in 1926 (Minute 112) instructed the Council to consider the advisability of pressing for the amendment of the Midwives Act, 1918, in order to secure that Local Authorities should be responsible for payment for ante-natal work.

The Council considers that, for the following reasons, the responsibilities of Local Authorities in this respect should not be increased:—

(a) such a provision would only apply to persons not entitled to medical benefit under the National Health Insurance Acts;

(b) any such provision might lead to persons who are not entitled to medical benefit being sent to the local clinic, where there is one, instead of remaining with their own doctors; and

(c) that where there are no clinics Local Authorities who are already complaining of the heavy burdens laid on them by Section 14 of the Midwives Act, 1918, might reasonably oppose the suggestion.

The Council accordingly recommends:—

Recommendation: That it is inadvisable to press (as suggested in Minute 112 of the A.R.M. 1926) for the amendment of the Midwives Act, 1918, in order to secure that Local Authorities be made responsible for ante-natal work to any greater extent than is at present the case.

Tests for "Drunkenness."

120. The Special Committee of the Association which was appointed to consider and report on the present tests for "drunkenness" with recommendations as to their modification or improvement, has presented its report to the Council.

On account of the special nature of the Report the Council is not submitting it to the Representative Body for approval, but authorised its publication in the Supplement to the *B.M.J.* of 19th February, 1927, and the Report was immediately communicated to the lay Press and placed on sale. The members of the Committee have been cordially thanked for their services.

Factories Bill.

121. Under the Factories Bill, 1926, it was proposed to transfer from Local Authorities to the Home Office the duty of enforcing those provisions of the Factories Act which relate to the sanitary conditions of workshops. This is opposed to the policy of the Association that the administration of all health services should be co-ordinated under the Ministry of Health. As the Government has stated its intention again to introduce a Bill on the lines of the 1926 Bill, the Ministry of Health has been asked to receive a deputation from the Association, the Society of Medical Officers of Health and the Association of Certifying Factory Surgeons which will urge that the Association's policy on this matter should be adopted. The Ministry is at present in communication with the Home Office on the matter.

Medical Defence.

122. The following two motions (Mins. 113-4) were submitted to the Representative Body in 1926, but subsequently withdrawn:—

That the Representative Body views with alarm the present position of members of the medical profession with regard to medical defence in that no Medical Defence Society completely indemnifies the principal for the acts of his assistant or locum; and is of opinion that the time has arrived for Defence Societies to issue a comprehensive policy such as is issued in other branches of insurance work.

That the Representative Body calls attention to the fact that under present conditions principals are legally responsible for the acts of their assistants unless both belong to the same Medical Defence Society, and instructs the Council of the Association to take up the question with a view to the issue by the Medical Defence Societies of an "All-In" policy, to cover these risks, on the lines of other insurance companies.

Arising out of consideration of the matters dealt with in these motions and out of correspondence with regard to medical defence which appeared in the *British Medical Journal*, a conference was arranged between representatives of the Association and the Standing Joint Committee of the Medical Defence Union and the London and Counties Medical Protection Society, when matters relative to the medical defence of medical practitioners were considered, and certain questions were submitted on behalf of the Association with a view to defining the exact liability of the societies.

The representatives of the societies agreed to give these matters their very serious and, if possible, favourable consideration, and the Council is now awaiting their deliberations, and hopes to report in the Supplementary Report.

Orthopædic Hospitals and Clinics, and Treatment of Physically Crippled Children.

123. The Representative Body in 1926 (Min. 103) decided that for part-time work at ordinary orthopædic clinics the remuneration of the medical practitioner should be £2. 12s. 6d. per session of not more than two hours, provided there is a limitation, to be agreed locally, of the average number of new cases to be seen in each session.

124. The Council submits for the information of the Representative Body the Memorandum contained in Appendix VI. concerning the following resolution of the A.R.M. 1926:—

Minute 122.—Resolved: That this meeting requests the Council generally to consider and report upon the present position and probable future development of organised schemes for "the treatment of physically crippled children" (infancy up to 16 years of age), and of "children suffering from actual or potential rheumatism and/or heart disease," and in particular to consider the following suggested governing principles:—

(a) The selection of patients should be mainly through the various branches of the Public Health Service;

(b) the clinical treatment should, wherever possible, be by means of private practitioners and voluntary hospitals,

and recommends:—

Recommendation: That the specialist work of orthopædic treatment whether at hospitals or clinics should not be done by whole-time officers, but, on a part-time basis, by surgeons who need not necessarily be devoting all their attention to orthopædic work.

Recommendation: That existing local institutions should be utilised to their fullest extent.

Recommendation: That the private practitioner should have free access to the work at hospitals and clinics for the purposes of observation and training, and that his services should be fully utilised by giving him a definite position in the scheme both at the clinic and in the domiciliary care of cases.

Recommendation: That the arrangements laid down in the British Medical Association's scheme for school children and maternity and child welfare clinics should apply equally in regard to orthopædic clinics. (*Vide Handbook, p. 192.*)

Mental Deficiency Bill.

125. The Mental Deficiency (H.L.) Bill, 1926, was dropped by the Government at the end of the last Parliamentary Session owing to lack of time and to the fact that the definition of "mental defectiveness" contained therein was to be opposed. The definition of "mental defectiveness" proposed in that Bill was "a condition of arrested or incomplete development of mind whether innate or induced after birth by disease, injury or other cause," and the Council, as it approved that definition and considered it would fill in a gap left by the Mental Deficiency Bill, 1913, urged the Ministry of Health to reintroduce the Bill early in the 1927 Parliamentary Session.

126. Another Bill has now been introduced as a private Member's Bill and "mental defectiveness" is therein defined as "a condition of arrested or incomplete development of mind existing before the age of 18 years, whether arising from inherent causes or induced by disease or injury." It is hoped that this variation will placate much of the former opposition. The Council is raising no objection to the proposed definition.

Receipt of Fees by Medical Members of Local Authorities.

127. A deputation from the Association has discussed with a representative of the Ministry of Health, difficulties which may arise owing to the acceptance by medical members of local authorities of fees for medical services paid by those authorities. The deputation was anxious to find out if medical members of local authorities accepting such fees could be exempted from disqualification under Section 12 of the Municipal Corporations Act, 1882, which would prevent them being or remaining members of local authorities.

128. The Ministry of Health, while fully alive to the difficulties of the position, pointed out that legislation would be necessary to get over them and that the Association would doubtless appreciate that if such legislation applied only to the medical profession it might savour of preferential treatment.

129. The Minister of Health considers that it would be proper to remove any disqualification now existing in cases where a contract was made by accepting an offer which was open generally to the public or to any specified class of the public and that this would cover the payment of fees by a local authority to any medical practitioner for reporting specified cases upon which he was in attendance such as that of a patient suffering from an infectious disease or a patient unfit to attend school; he believes that the Courts would hold that a medical practitioner was not disqualified in such circumstances and he would be disposed, should an opportunity occur, to introduce legislation removing any doubts in the matter. On the suggestion of the Ministry, the Council made enquiries as to whether other organised bodies of professional men are affected and has ascertained that the Royal Institute of British Architects, the Law Society, the British Dental Association and the Surveyors' Institution have received no complaints from their members in this connection.

130. The Council therefore feels that it is the medical profession alone that is affected by the present legal position and has intimated to the Ministry of Health that the Association desires (a) that members of medical staffs of hospitals who receive a portion of the money paid to hospitals by local authorities for the treatment of patients for whom the local authorities are responsible, and (b) medical practitioners who receive remuneration for medical attendance at clinics organised by local authorities where there is a rota of practitioners or where all practitioners who so wish may take a part in the work should not in consequence be debarred from membership of the local authorities concerned.

Medical Officers of Public Schools.

131. The Medical Officers of Public Schools Association having sought the assistance of the Association with a view to securing improved conditions of remuneration and employment of medical officers of public schools and improving the status of such officers, the Council submits the following recommendations for the consideration of the Representative Body. For the assistance of the Representative Body in considering this matter the Council also submits a memorandum as regards the duties, difficulties and conditions of service of such officers, namely:—

(a) The work of a medical officer of a school is carried on in circumstances which differ from those of the general practitioner. He is at a disadvantage in that he generally has no personal consultation with the parents or guardians of the boys who are ill, except by a special arrangement, nor is he in touch with the doctors who attend the pupils when they are at home.

(b) The Association is of opinion that it is advisable and desirable that every pupil in a public school should be examined periodically and a report furnished on their physical development.

(c) It is a common fallacy to assume that because the school population is one of healthy pupils, the sum total of work is small. This will be seen from a consideration of the duties of the medical officer which may be stated under the following heads:—

(d) Care of those who are actually sick—pupils and usually masters (servants are excluded, as they are attended under the N.H.I. Acts).

(e) Preventive work, i.e., keeping the pupils well

(i.) by constantly being among them and knowing them personally so as to recognise the early stages of fatigue, whether due to over-exercise, too little sleep, or a diet which may be lacking in quantity or quality. Periodical examinations of all pupils should be made and records kept;

(ii.) by general hygienic measures. These comprise diet in all its aspects, hours of sleep, hours of work in relation to age; exercise (its modification and relation to meals); and physical training; the efficient lighting, ventilation and cleanliness of the school premises; and personal cleanliness.

(f) Of the duties enumerated above, those under "preventive work" are the most important and onerous.

(g) It is the duty of the medical officer to know all the pupils personally so that he may be able to recognise at once any signs of debility or poor nutrition.

(h) The pupils are continually engaged in mental or physical work; the former, with the stress of rapid development during puberty, bringing certain troubles in its train; the latter with its liability to numerous minor surgical ailments.

(i) The school medical officer must be prepared to deal with parents and guardians of the pupils and these have many and varied ideas on the question of exercise, diet and medical treatment. This will often require a great deal of tact and knowledge of the world.

(j) Clerical work, including correspondence with house masters, parents and doctors, reports to the headmaster, the keeping of personal records of each pupil, general statistics and an annual report to the governing body.

(k) The administrative duties are comparable to those of a hospital superintendent without the help of a secretary or typist.

(l) His work commences about 8 a.m., with out-patient sick parade. He sees all pupils reporting sick for the first time, and will keep a watch on all other cases brought up for treatment. He must be constantly on the alert for any case of contagious or infectious disease especially during the first three weeks of the term.

(m) The ward visit is then made, all necessary dressings done and arrangements made for treatment.

(n) Clerical work follows. A list of all patients is sent to the headmaster and to each house master or tutor concerned with a report on the condition of the patient.

(o) Special detailed treatment (i.e., adjustment of splints, dressings, and minor operations) follows, with the necessary radiology and development of negatives, etc. Routine correspondence with parents of in-patients is usually carried out by house masters but in special cases the medical officer must do this after his in-patient visit.

(p) An afternoon or evening sick parade is held, followed by an evening visit to the in-patients. During the afternoon the medical officer must be available in case of accidents in the playing fields.

(q) The examination of new pupils is a very important duty. This takes much time and care as defects unknown to the parents are often found and must be reported to them.

(r) Arrangements may have to be made for anæsthetics for dental operations and for major operations.

(s) The work does not often finish with the end of the school term, and in addition the medical officer must be available at least a week before the commencement of the next term.

(t) Official school holidays amount to 15 or 16 weeks in the year, but the medical officer rarely gets half of this clear of all school work.

Whole-Time Medical Officers of Public Schools.

Recommendation:—That the whole-time Medical Officer of a Public School should be appointed by, be directly responsible to, and have direct access to, the Governors of the School.

Recommendation:—That the whole-time Medical Officer of a Public School should be a medical practitioner who has had experience in practice, including experience in special branches of medical work; and that the possession of a qualification in public health work would be an additional advantage.

Recommendation:—That the minimum commencing salary of a whole-time Medical Officer of a Public School with a maximum of 500 resident pupils should be £600 a year, plus £1 per head per annum for each resident pupil in excess of 500; and that, in addition, the Medical Officer should be provided by the School Authorities with a suitable house or an adequate allowance in lieu thereof.

Recommendation:—That the initial salary of a whole-time Medical Officer of a Public School should be subject to such periodical increments as shall have been determined upon between the Governors of the School and the Medical Officer at the time of his appointment.

Recommendation:—That the whole-time Medical Officer of a Public School should not be responsible, during the intervals between school terms, for any medical attendance given to pupils other than those remaining at the school owing to illness.

Recommendation:—That the duties of a whole-time Medical Officer of a Public School should include:—

- Examination of all new pupils on admission to the school.
- Periodical examination of resident pupils.
- Special examination of candidates for the various Services.
- Simple vision and colour vision testing.
- Supervision and inspection of school dietary.
- Supervision and inspection of physical training of pupils.
- Supervision of school sanitation.
- Attendance on sick resident pupils and masters.
- Inoculations and administration of vaccines.
- Dispensing of medicine, but not the provision of drugs.
- Administration of anæsthetics for dental extractions.
- Attendance while school games are in progress.
- Keeping of medical records of resident pupils.
- Special reports to the Headmaster, and House Masters *re* patients.
- Correspondence with House Masters, Tutors, parents and private medical attendants of pupils.
- General administration of the sanatorium.
- Advice on all general hygienic measures in connection with school work.
- Annual report to the Governing Body.

Recommendation:—That the following duties should not be demanded of a whole-time Medical Officer of a Public School as being covered by his salary, but may be undertaken by him by special arrangement:—

- Bacteriological examinations.
- Administration of general anæsthetics (except in emergency).
- X-ray examinations.
- Routine refraction testing.
- Major operations.

Recommendation:—That a whole-time Medical Officer of a Public School should not be allowed to enter into private practice nor to undertake consultative work outside the school community, but he may make private arrangements for:—

- Attendance on Masters out of term time.
- Attendance on Families of Masters.
- Attendance on Servants of Masters.
- Attendance on School Servants.

Recommendation:—That, in the case of a preparatory or junior branch school under the same governing body as the principal school, it should be open to the Medical Officer to the principal school to act as Medical Officer to such preparatory or junior branch school, but he should not act as Medical Officer to a preparatory or junior branch school not under the same governing body as the principal school.

Recommendation:—That satisfactory arrangements should be made in school curricula for giving instruction to the pupils on questions of health and hygiene; and that the Medical Officer should be consulted in framing the syllabus.

Part-Time Medical Officers of Public Schools.

Recommendation: That a part-time Medical Officer of a Public School should be appointed by, be directly responsible to, and have direct access to, the Governors of the school.

Recommendation: That the usual duties of a part-time Medical Officer of a Public School include:—

- Attendance on sick resident pupils.
- Reports to Masters on sick resident pupils.
- Correspondence with parents regarding the health of resident pupils.
- Accessibility when school games are in progress.

Recommendation: That the remuneration of a part-time Medical Officer of a Public School for the performance of such duties should be either:—

(a) by a capitation fee of not less than 10s. 6d. per resident pupil per term, or £1. 11s. 6d. per resident pupil per year;

(b) by salary of such amount as shall be approximately equivalent to the remuneration of the Medical Officer if he were paid a capitation rate as stated in foregoing sub-paragraph (a); or

(c) by arrangement with the parents of the pupils where the parents are directly responsible to the Medical Officer for the payment of his fees;

Recommendation: That the duties of a part-time Medical Officer of a Public School should also include:—

- Examination of new pupils on admission to the school.
- Periodical examination of pupils.
- Keeping of medical records of resident pupils.
- Supervision and inspection of dietary of resident pupils.
- Supervision and inspection of physical training of pupils.
- Simple vision and colour vision testing.
- Advice on all hygienic measures in connection with school work.

Recommendation: That where the additional duties enumerated in the foregoing recommendation are required of a part-time Medical Officer of a Public School the remuneration should be increased by higher capitation rate or retaining fee.

Recommendation: That satisfactory arrangements should be made in school curricula for giving instructions to the pupils on questions of health and hygiene; and that the Medical Officer should be consulted in framing the syllabus.

CERTIFICATION UNDER THE WORKMEN'S COMPENSATION ACT.

132. In paragraph 226 of its Supplementary Annual Report last session, the Council reported that difficulties had arisen in regard to certification under the Workmen's Compensation Act, primarily in connection with the responsibility for payment for medical certificates and that the Council had decided to approach the Accident Offices Association (representing the larger Insurance Offices which undertake workmen's compensation insurance) with a view to ascertaining what certificates are required by Insurance Companies. In this connection the Representative Body passed the following resolution:—

Minute 111.—Resolved: That the following motion be referred to the Council:—

That (with reference to para. 226 of the Supplementary Report of Council) the Representative Body is of opinion that, while the obligation of certification of injury under the Workmen's Compensation Act, is in the first instance placed upon the employer, and there is no obligation whatever under the National Health Insurance Acts to provide compensation certification, nevertheless it is often found that the employer, or his agents, or his covering company requires initial certification either at no expense or wrongfully at the expense of the injured person, and that it is therefore advisable that a uniform and universally used form of certification be employed in all cases in order to conform to the law; and that the Council be instructed to take such steps as may be necessary to bring a uniform certification system into being at the earliest possible moment.

133. The position was discussed with representatives of the Accident Offices Association on 10th March, 1927, when the representatives of that Association stated (a) that they did not require or ask for certificates in the first instance in order to substantiate claims for compensation, but if they decided that a medical report was desirable they paid for it; (b) that they paid the employer insuring with them for any information of a medical nature which they required him to obtain; (c) that the present system worked well, and no uniform system of initial certificates would be of value to them; (d) that they neither induced nor pressed employers to produce certificates; (e) that they would be glad to hear of, and investigate, instances in which employers who were insured with them made difficulties with injured workmen on account of the absence of an initial certificate; (f) that it would not be possible for them to circulate all their clients, pointing out that initial certificates were not required; and (d) that if an employer, for purposes of discipline or record in his own works, asked the insured person to provide a certificate, that was no business of the Insurance Companies.

DEATH REGISTRATION AND CERTIFICATION.

134. As from 1st January, 1927, Registrars of Births and Deaths were instructed that if a medical certificate of the cause of death showed that the certifying practitioner had not seen the deceased person after death nor within 14 days before death, the matter should be referred to a coroner. Before issuing these instructions the Registrar ascertained that the Council would raise no objection to the proposal, but his attention was drawn to the fact that practitioners are allowed to issue monthly certificates to insured patients suffering from chronic illnesses and to the fact that deaths may not infrequently arise towards the end of that period in cases in which the doctor has not recently seen the patient and in whose case there can be no suspicion of neglect or foul play.

The Council considers that when this procedure becomes known to the public it is likely to cause the public, in order to avoid the inconvenience and unpleasantness of an inquest, oriat any rate of inquiries by the Coroner's Officer, to ask the certifyng practitioner to make a visit in order that he may be in a position to certify that he has seen the body of the deceased person. This would be in accordance with the long standing policy of the Association in favour of certification of the fact of death.

REMUNERATION OF ASSISTANTS.

135. The Representative Body in 1925 passed the following resolution:—

Minute 125.—Resolved: (a) That on general principles the employment in suitable cases of assistants by practitioners is in the interests both of the general public and of the profession.

(b) That it is not desirable for a principal to employ an assistant where he is unable to exercise adequate personal supervision over the latter, *e.g.*, in some types of branch practice. In such circumstances a partnership is to be preferred.

(c) That the offer or a promise of a future partnership should not be made a reason for paying a lower salary to an assistant.

(d) That the minimum commencing salary for a newly qualified inexperienced practitioner, acting as a whole-time indoor assistant to a practitioner, should be £240 per annum, with the addition of board and lodging; and in the case of such a practitioner employed on an outdoor basis, the board and lodging value should be estimated at from £120 to £160 per annum according to the circumstances of the individual case; that the only exceptions or possible exceptions to the foregoing should be in the case where, owing to arrangements made for study leave, or to physical disability or other reasons, the assistant is not able to give full time to the work.

(e) That a whole-time assistant should be entitled to not less than two weeks' holiday a year on full pay.

(f) That no steps should be taken for the present to make the foregoing expressions of opinion the policy of the Association, but they should be used for the assistance of the office in advising on points connected with the terms and conditions of the work of assistants. Where an advertisement is offered for insertion in the *British Medical Journal* in connection with an assistantship not in accordance with the foregoing opinions, the attention of the advertiser should be drawn to them in the hope that the advertisement will be amended; but the advertisement should not, if otherwise eligible, be refused.

In attempting to give effect to these instructions, difficulty has been experienced as many practitioners offer their services in advertisements in the *British Medical Journal* for less than the salaries suggested by the Representative Body and this leads to corresponding offers by employers. Moreover, these facts are frequently quoted by candidates for public appointments who are seeking to find an excuse for applying for such as are advertised at rates below those sanctioned by the Association. While at the present time not suggesting any amendment of the resolution of the Representative Body quoted above, the Council thinks the Representative Body should have an opportunity of discussing this matter fully.

SHIP SURGEONS.

136. The policy of the Association with regard to the remuneration of ship surgeons is contained in the following resolution of the A.R.M., 1912:—

Minute 158.—Resolved:—That the remuneration of ship surgeons should not be less than £10 a month.

Many shipping companies now pay their surgeons £25 a month though many pay less and not a few have surgeons who receive no salary. Whilst it is not suggested that the Representative Body should amend the Policy adopted in 1912, the Council proposes in the next edition of the Handbook and Handbook for Newly Qualified Practitioners, to indicate that the above-mentioned minimum salary suggested in 1912 is subject to the 50 per cent. general increase which has taken place in medical fees since the War.

STATUTORY RECOGNITION OF OPTICIANS.

137. Renewed life appears to have been given to the efforts of opticians to secure statutory recognition owing to the use made of them by approved societies in connection with the administration of ophthalmic benefit under the Health Insurance Acts, and the apparent acquiescence therein of the Ministry of Health. A private Bill having been introduced into the House of Commons "to secure the registration of optical practitioners, and to regulate the practice of sight-testing, and for purposes incidental thereto," the Ministry of Health has set up a Departmental Committee to consider the Bill (prepared by the Joint Committee of Qualified Opticians) and requested the Association to nominate a member for appointment thereon. The Council has accordingly nominated Dr. H. B. Brackenbury.

138. The Council has in course of preparation evidence for submission to the Departmental Committee based upon Minute 143 of the A.R.M., 1923, expressing the opinion that any State recognition of sight-testing by persons not possessed of a medical qualification would not be in the interest of the community, and ought to be opposed in the strongest possible manner.

Parliamentary Elections.

139. The Council, on behalf of the Association, expressed approval of the candidature of Dr. Haden Guest as Independent Constitutional candidate at the North Southwark By-election, March, 1927, and made a grant out of the Medical Representation in Parliament Fund to Dr. Guest towards his election expenses. He was, however, unsuccessful in his effort to re-enter Parliament. After payment of the amount in question there is a sum of rather more than £1,000 in this Fund at the present moment.

Public Health and Poor Law.

HEALTH LECTURES BY MEDICAL PRACTITIONERS.

140. In view of the likelihood of increased use being made of the services of medical practitioners for the giving of public lectures on health matters under arrangements made by local authorities, consideration has been given by the Council to the position of such practitioners and as to whether private practitioners should be barred from giving these lectures, more particularly if they practise in the area where the lecture is to be given.

On the former point, the Council, whilst of opinion that medical practitioners should not give their services gratuitously in this connection, suggests that the amount of the remuneration therefor must be governed by the status of the practitioner concerned. On the latter point, the Council sees no reason for any differentiation being made as to practitioners giving these lectures.

The Council recommends:—

Recommendation: (i.) That medical practitioners should not give health lectures under the ægis of local authorities gratuitously; and (ii.) that although the lecturer must in every case necessarily be approved by the local authority there is no reason why any particular class of practitioner should be excluded from delivering such lectures.

SMOKE ABATEMENT.

141. With a view to assisting the Ministry of Health in any efforts it might make to secure abatement of the smoke nuisance, the Council has informed the Ministry of Health that it is of opinion that, in view of the importance of a pure atmosphere for the health of the people, the Government should press forward measures for smoke abatement by securing more stringent laws regarding industrial smoke and by progressive improvement in the methods of domestic heating especially in connection with new housing schemes.

CO-OPERATION BETWEEN B.M.A. AND SOCIETY OF M.O.H.

142. The scheme of co-operation between the Association and Society of Medical Officers of Health agreed to by the Representative Body in 1923 (Min. 39) is under consideration with a view to defining more clearly the relationship between the two bodies and to render their co-operation more effective. As a first step in this direction it has been decided that the offices of the Association and Society shall keep each other advised in all matters relating to prospective public health appointments, and that the Society shall make it clear to all its members that any action taken locally must be by and through the British Medical Association Division.

PUBLIC HEALTH APPOINTMENTS.

143. The efforts of the Council to induce local authorities to adopt the scale of minimum commencing salaries for public health appointments, have met with very fair success. A statement as to the number of cases in which scale salaries have been secured since the A.R.M. 1926, will be included in the Supplementary Report of Council.

SCOTTISH PUBLIC HEALTH APPOINTMENTS.

144. Pending the result of negotiations between the Scottish Committee and the Scottish Health Authorities, the Council has decided not to insert "Important Notices" in the *British Medical Journal* relative to any Scottish public health appointment in which the salary, although less than the scale minimum commencing salary of £630 a year, offers such increments as will make the total salary over a limited number of years equal to that which would be received under the scale, provided that the commencing salary offered is not less than £500 a year.

STATUS OF MEDICAL OFFICERS OF HEALTH IN LOCAL ADMINISTRATION.

145. The fifth Annual Report of the Ministry of Health (dated 1923-24) in its opening section headed "Local Government and Local Finance" contains the following paragraphs:—

> Some difficulties have been caused during the year by proposals to give the Town Clerk more extensive powers of control over other officers than are usually provided for expressly by the terms of appointment.
>
> It is manifest that a Town Clerk or any other officer could not properly dictate to other persons in the employment of the Local Authority, the Medical Officer of Health or the Engineer, for instance, what they should do in the details of technical matters within their particular purview. Nor could any Local Authority impose on any one of their officers duties in conflict with those conferred on any other officers by statute or by central regulations.
>
> The proposal to make some one officer definitely responsible for the general supervision of the whole of the business of the Local Authority, and their chief adviser on all matters of policy, is, however a different question.
>
> The work of Local Authorities has changed very considerably in recent years. The large Authorities, in particular, in addition to being the bodies regulating matters of local government in their area, are in fact important business corporations, carrying out costly services, trading and other.
>
> There appears to be room for consideration whether, while maintaining to the full the traditions of local government service, and, especially, of democratic control, the time has not come for some further development of the administrative arrangements of the Local Authorities, and for their having one chief official who, whatever his title, shall be in a position of definite responsibility for the general official organisation.
>
> It may be premature to express any decided opinion on this possible development, but the question clearly merits attention. Two conditions would always have to be fulfilled —(1) The unquestioned control of the elected body; (2) No derogation from the responsibility of the present principal officers. The value of any such chief official as has been suggested would depend very largely on his exercising general control, on his not attempting to do the detailed work of officers expressly appointed because of their specialised qualifications, and on his working in full harmony with them.

146. The Council takes the strongest possible objection to the suggestions contained in the above-quoted paragraphs and, in notifying the Ministry of Health to this effect, pointed out that it considered it impossible for a town clerk to be responsible for the work either of a medical officer of health or of any other technical officer of the local authority.

147. In a few instances where the suggestion contained in the above paragraphs has been put into operation representations have been made by the Council to the Ministry of Health objecting thereto.

DEPUTATIONS TO LOCAL AUTHORITIES IN REGARD TO PUBLIC HEALTH MATTERS.

148. In view of the number of requests received by the Association to send deputations to local authorities in support of representations made on behalf of public health medical officers, the Council has decided, as a general rule, only to agree to deputations asked for by medical officers or Divisions (a) in the case of new appointments, (b) where there is urgency, and if sanctioned by the Chairman of the Committee after consultation with the Medical Secretary, and (c) in cases which have been approved by the Public Health Committee.

SPECIALIST SERVICES: PUERPERAL FEVER AND PUERPERAL PYREXIA REGULATIONS.

149. In connection with the compilation by a county medical officer of health of a list of obstetricians willing to act as specialists under the Puerperal Fever and Puerperal Pyrexia Regulations, 1926, a Division in the county, on being asked to submit the names of a few selected obstetricians for this purpose, decided that the names of all the competent practitioners in the area who were so willing should be placed upon a panel in order that private practitioners could select therefrom the specialists they required. The county medical officer of health did not think his authority would be willing to approve such a list but would wish to appoint one or more practitioners definitely. The matter was submitted to the Council which has expressed the opinion that in areas where several consulting obstetricians are willing to undertake this work it is desirable that all their names should be included in a local panel.

Poor Law Reform.

150. In view of the following Minute 106 of the A.R.M., 1926, further consideration has been given by the Council to the reply of the Minister of Health to certain of the Association's criticisms of the Minister's provisional proposals for poor law reform (referred to in paras. 25 of the Annual Report and 236 of the Supplementary Annual Report to the Nottingham Meeting):

> *Minute* 106.—Resolved: That the Memorandum of Evidence submitted to the Royal Commission on Local Government on behalf of the Association be approved, but that further consideration of the matter by the Council be given, if possible, before any Parliamentary or Political action be taken.

The first of the two points on which the Minister was not in full agreement with the policy of the Association was that he was not favourable to making co-option on the new health committees compulsory. Such co-option by the Council of a county or borough is to be permissive only.

151. The Council much regrets this attitude of the Minister and wishes still to press for compulsory co-option. Nevertheless this is not necessarily a fatal bar to the Association supporting the Government proposals, provided the rest of the Association's suggestions in the matter are accepted, because in that event

> (i.) there would still be an opportunity for the local profession to try to persuade local authorities to adopt co-option;
>
> (ii.) there would still be opportunity for the local profession to secure the election of local medical practitioners upon the local authority; and
>
> (iii.) there would be a representative local medical committee which would nominate local practitioners for co-option upon the local authority if co-option be ultimately obtained, and would in any case have to be consulted on medical matters.

152. If, however, upon the publication of the Bill it is found that the Association's proposals as to compulsory co-option and as to a statutory medical committee are both rejected, then the Council is of opinion that the full weight of the Association should

be used to oppose the passage of the Bill through Parliament or to secure its amendment in accordance with the Association's desires.

153. A second point upon which the Ministry's reply was not completely satisfactory was as regards the provisional proposal of the Minister that County Councils be given a general supervisory authority over, and responsibility for, the health activities of other local authorities in their administrative area. Of this the Association expressed strong disapproval, except in the event of a local health authority refusing to carry out its duties. The Minister has since stated in reply to a deputation that this objection will have to be met in the case of the larger boroughs and urban districts, but the modifications to be made have not been indicated in detail. Unless, on the introduction of the Bill this objection is adequately dealt with the Council is of opinion that the Bill or any relevant clause should be strongly opposed.

154. There has been objection in various quarters on the Association's incidental suggestion that the powers and duties of Insurance Committees under the National Health Insurance Acts should, with proper safeguards, be handed over to the local health authority if there is to be a real unification of health administration. These objections seem in the main to be based on a misunderstanding of the Association's attitude. Whether the administration of Medical Benefit ought to be transferred to the new local authority for other health purposes would depend (in the opinion of the Association) on what kind of a new Committee was set up as an alternative and how far the demand of the Association was met for medical representation thereon, and for the establishment of a Local Medical Committee with adequate powers in connection therewith.

National Health Insurance.

DISPENSING CAPITATION FEE.

155. In view of the cost of medicines a request was made to the Ministry of Health for an increase in the dispensing capitation fee from the existing 2s. to 2s. 6d. per annum per dispensing patient as from January 1st, 1926. As a result it was agreed with representatives of the Ministry of Health that an investigation be made by the latter in agreed areas of the cost of medicine ordered by practitioners who both prescribe and dispense for their patients. Subsequently the Ministry of Health made an offer to increase the dispensing fee from the existing 2s. to 2s. 3d. as from January 1st, 1927, which offer was accepted by the 1926 Annual Conference of Representatives of Local Medical and Panel Committees as being the best obtainable under the circumstances.

CERTIFICATION AND SICKNESS BENEFIT CLAIMS.

156. Members doubtless read the important speech by Sir Walter Kinnear, Controller, Insurance Department, Ministry of Health, to the October, 1926, Conference of Representatives of Local Medical and Panel Committees (*B.M.J.* Supplement, October 30th, 1926), upon the position in which approved societies were finding themselves owing to the greatly increased claims made upon their Sickness Benefit funds during 1926.

157. The Conference instructed the Insurance Acts Committee to consider what practical steps could be taken to meet the difficulties referred to by Sir Walter Kinnear, and the members of the Conference pledged themselves to use their influence locally in order to secure strict adherence to the principles governing certification under the National Health Insurance Acts. Following the consideration of the question and of the expressions of opinion on the matter received from Local Medical and Panel Committees, the following communication was addressed to the Ministry of Health on January 26th, 1927:—

BRITISH MEDICAL ASSOCIATION,
B.M.A. HOUSE,
TAVISTOCK SQUARE, LONDON, W.C. 1.
26th January, 1927.

Dear Sir,

Sickness Benefit Claims and Certification.

The Insurance Acts Committee has given careful consideration to the question of certification under the National Health Insurance Act in its relation to Sickness Benefit Claims, which was the subject of an address to the Annual Conference of Representatives of Local Medical and Panel Committees in October last, by Sir Walter Kinnear, and particularly to the possible relation of the increased claims for Sickness Benefit to the Regulation which allows for change of doctor at any time by insured persons.

With regard to this latter point I am instructed to state that so far as the professional aspect of the matter is concerned, the Committee remains firmly of opinion that the present unfettered free choice of doctor by patient is the ideal principle in any scheme of national health insurance, and that it would not be advisable to return to the previous arrangement under which insured persons could only change their medical attendant at definite dates. At the same time, the Committee recognises that the additional duties cast upon insurance practitioners, as compared with their duties as private practitioners, necessitate the existence of certain procedure in association with the principle of choice of doctor which is not necessary in private medical practice, and modification of this procedure may be necessary. The Committee submits a suggestion that the insured person should be required, in some agreed suitable, prescribed way, to give at least two weeks' notice to the Insurance Committee of intention to change his doctor, provided that a person receiving treatment should as at present, have the right of immediate change of doctor subject to the mutual consent of the two practitioners concerned. It is believed that the interposition of a small formal check such as this would give the insured person, who may be annoyed because he has been refused a certificate on which he may claim Sickness Benefit, time to reflect.

There is one aspect of the question which was referred to at the discussion on November 30th, 1926, namely, the possibility of making provision for obviating in future the situation which arose recently in Durham and elsewhere, where, owing to the coal stoppage, mass pressure was brought to bear upon insurance practitioners by the trade unions to obtain Sickness Benefit for their members in order to conserve the unions' funds. The Ministry is urged to take into very serious consideration the desirability of preparing in advance for a situation which may easily arise again.

The Committee is also of opinion that certification rules bearing less severely upon insurance practitioners than those at present in operation, that is to say, relying more upon his discretion, while providing for a more rigorous prosecution of the individual wrong-doer, would result in more efficient certification.

With respect to the general question of the recent increased claims the Committee would point out that, under a system of compulsory State insurance, the attitude of the individual insured person with regard to obtaining benefit from State funds is entirely different from that of the voluntary member of an old Friendly Society or similar body. He will apply for benefit from funds which he regards as State provided and practically unlimited, where he would never have claimed from a fund built up entirely from contributions of himself and his fellows. The present day tendency to look to the State for help in every emergency is likely to make this factor more important as time goes on. Secondly, the economic pressure which keeps many sick persons at work who might very properly remain away and consequently be in receipt of Sickness Benefit, is removed in times of unemployment, with the result that such persons quite properly claim Sickness Benefit. Then there is the widespread and sometimes vexatious use at present made of medical referees by the approved societies, which the Committee believes is tending to lessen the insurance practitioner's sense of responsibility in the matter of certification. Another cause which is operating as regards women is the advice received at ante-natal and maternity clinics, both before and after confinement. These are, in the opinion of the Insurance Acts Committee, contributory causes which must be taken into account in any effort to trace the cause of the increase in claims for Sickness Benefit.

In conclusion, I am desired to inform you that the Insurance Acts Committee, fully recognising the serious nature of the present position and the duty of the medical profession in this matter, is urging Local Medical and Panel Committees to hold local meetings of insurance practitioners for the purpose of discussing in all its bearings the question of certification in its relation to Sickness Benefit claims, and is suggesting that at such meetings attention should be given to the possibility of co-operation by practitioners in ways which might allay the fear that patients who desired to change from a doctor who for good reasons had refused Sickness Benefit certificates, would readily be accepted by other practitioners.

Yours faithfully,

(Signed) ALFRED COX,
Medical Secretary.

The Secretary,
Ministry of Health,
Whitehall S.W. 1.

DISCIPLINARY MACHINERY.

158. The disciplinary procedure of the Regulations was the subject of discussions with representatives of the Ministry in November and December, 1926. It was then pointed out that there was general dissatisfaction among insurance

practitioners with the present disciplinary procedure on two main grounds (a) that practitioners had been subjected to decisions of the Minister on questions of professional treatment, based upon a judgment of the Minister's medical officers, and (b) that the Minister in giving his decisions in disciplinary cases had departed from the recommendations of the Committee or the Court of Enquiry reporting upon the cases. The further discussion of this question is in abeyance pending an examination of the whole of the disciplinary machinery of the Regulations by the Insurance Acts Committee with a view to agreement, if possible, with the Ministry as to revision and improvement of the present machinery.

OPHTHALMIC BENEFIT.

159. Up to February, 1927, the Association's list of practitioners who had intimated their willingness to advise on ophthalmic cases and prescribe spectacles when necessary (at a fee of one guinea) for insured members of Approved Societies contained 899 names including duplicates, or 756 individuals, the former being distributed as follows:—England 789, Scotland 87, and Wales 23. Alterations to the list are forwarded to the Ministry of Health periodically and are issued by the Ministry periodically to the Clerks to the Insurance Committees concerned. Copies of the complete list are reprinted twice a year by the Ministry of Health and made available to approved societies, etc. In view of statements that have been made it may be well to make it clear that admission to this list is in no way affected by membership or non-membership of the Association.

160. The position in connection with the administration of ophthalmic benefit is far from satisfactory. On the one hand, there is the statement by Sir Walter Kinnear, Controller, Insurance Department, Ministry of Health, at the October Conference of representatives of Local Medical and Panel Committees, which was, briefly, to the effect that if every insured person who required glasses was to be referred to an ophthalmic surgeon, ophthalmic benefit would cease at an early date owing to lack of funds. From that statement and other sources it would appear that many approved societies hold the opinion that an insurance practitioner should take the responsibility of recommending in some eye cases that the patient should consult an optician (a responsibility which the Association declined to advocate or countenance when suggested by societies at the outset of the present arrangements) instead of, as at present, referring all such patients to a practitioner upon the Association's ophthalmic list.

161. On the other hand, experience of the operation of ophthalmic benefit indicates that the administration of ophthalmic benefit rests practically entirely in the hands of approved societies who may or may not grant a member's application therefor, or, if granting it, may refuse to permit the member to consult an ophthalmic surgeon, and refer him to an optician, thus ignoring the recommendation of the patient's own practitioner. Many cases recommended by a doctor for treatment by an ophthalmic specialist are deliberately referred by Societies to an optician who either refers the case to an ophthalmic surgeon or, more probably, attends to the case himself. Practitioners also complain that many societies when sending their members to a practitioner on the list do not allow them free choice of those on the local list.

162. The Ministry of Health has, therefore, been informed that in view of the various difficulties which have arisen in connection with the administration of ophthalmic benefit since its inauguration, the Association is of opinion that the following principles should be re-affirmed and maintained in practice:—

(i.) that no practitioner should be encouraged or even allowed to recommend his patients to a person not upon the Medical Register for the purposes of diagnosis or treatment;

(ii.) that the option of an approved society to recommend one of its members to see an unqualified person is not contested, but the onus of so doing and the responsibility for any untoward consequence following therefrom must rest entirely with the approved society;

(iii.) that there should be free choice of available practitioners upon the Association's ophthalmic list;

(iv.) that the selection of a particular ophthalmologist to see all or most of the cases dealt with by any approved society, whether in his private consulting room or at a clinic, is inconsistent with the arrangements agreed upon and should be discouraged both by the B.M.A. and the Ministry;

(v.) that the reference of a member by an approved society for treatment by a charitable institution is inconsistent with the arrangements agreed upon and should not be allowed.

Hospitals.

POSITION OF VOLUNTARY HOSPITALS IN REGARD TO THE RECOVERY OF MONEY.

163. In view of the doubt which exists as to the legal position of a voluntary hospital in trying to recover from patients the cost of maintenance and treatment in the circumstances referred to in the following resolution of the Annual Representative Meeting, 1926, the Council is obtaining counsel's opinion on the matter:—

Minute 59.—Resolved: That in all cases of accident where medical attendance is given at a Voluntary Hospital, and such medical attendance is covered either directly or indirectly by insurance, the hospital authorities should recover from the insurance company the full cost of maintenance and treatment of such patient. That where patients who would ordinarily be considered as private patients are admitted to hospital solely on account of accident or emergency, they should be considered as "private patients."

REMUNERATION OF VISITING CONSULTING STAFFS OF POOR LAW HOSPITALS.

164. The Council, having considered the following Minutes passed by the Representative Body in 1926, submits the recommendation set out below:—

Minute 66.—Resolved: (i.) That the minimum fee per visit of a consultant called in to a poor law patient in a Poor Law Hospital should be £2. 2s. 0d., with mileage in addition where necessary, and (ii.) that the minimum fee for each operation performed in such circumstances should be £5. 5s. 0d., the fee for a major operation being not less than £10. 10s. 0d.

Minute 69.—Resolved: That the following proposed amendment be referred to the Council:—

That where the remuneration of a consultant for regular periodic visits for either of these services (*i.e.*, consultation or operation) is on a salary basis it should be a matter of arrangement between representatives of the local medical profession and the Local Authority but should have regard to the minimum fees mentioned above (*i.e.*, Minute 66).

Minute 70.—Resolved: That the Council be instructed to consider the appropriate conditions of annual contracts for Visiting Consulting Staffs of Poor Law Hospitals.

Recommendation: That where the remuneration of a consultant for regular periodic visits to a Poor Law Hospital is on a salary basis, the amount of that salary should be a matter of arrangement between representatives of the local medical profession and the appointing authority, but regard should be had to the minimum fees laid down in Minute 66 of the Annual Representative Meeting, 1926, and/or to the basis of £2. 12s. 6d. for consultant sessions of not more than two hours, with an allowance for mileage where necessary.

RECOGNITION OF SERVICES OF VISITING MEDICAL STAFFS OF HOSPITALS.

165. The Council is of opinion that the following paragraphs of the Hospital Policy having served their purpose in connection with the introduction of the principle of the recognition of the services of Visiting Medical Staffs of Hospitals should now be deleted therefrom although the principle of para. 36 might very well be retained in a resolution of the Representative Body:—

34. The honorary medical staffs may find the following suggestions valuable in connection with the disposal of the moneys in the special fund, and accordingly the Association suggests to the hospital staffs concerned that one or more of the following methods of distribution of any moneys in the special fund may be found suitable:—

(a) To the members of the honorary medical staffs for their own personal disposal;

(b) for the assistance of members of the medical staff in connection with research work;

(c) for the purchase of instruments, books, etc., for the use of the medical staff, or for lending to other members of the profession;

(d) for the initiation or development of post-graduate teaching in the institution;

(e) the institution of a local medical benevolent fund administered by the members of the honorary medical staff, for dealing with necessitous cases (*e.g.*, widows and children of former colleagues);

(f) grants to any recognised medical benevolent fund or institution; or

(g) otherwise as the medical staff may decide.

36. Any concession of a nominal recognition of the services of the visiting medical staff by a percentage or honorarium should be accepted without prejudice and on account of the existing general economic conditions.

The Council therefore recommends:—

Recommendation: That paragraphs 34 and 36 of the Voluntary Hospital Policy (United Kingdom) be deleted.

166. The Council is, however, of opinion that the position of medical staffs of hospitals would be materially strengthened if the Representative Body adopted a resolution (not for inclusion in the Hospital Policy) urging the staffs to seek satisfactory recognition of their services and accordingly recommends:—

Recommendation: That the Visiting Medical Staffs of Hospitals should seek to secure arrangements with Boards of Hospitals for the satisfactory recognition of their services in accordance with Section XII. of the Voluntary Hospital (United Kingdom) Policy of the Association, since any laxity in securing such recognition is detrimental to medical work of all kinds and ultimately to the general public.

Propaganda on Hospital Contributory Schemes.

167. As at the present time hospital contributory schemes are being inaugurated throughout the country, the Council has issued to the medical staffs of Voluntary Hospitals and of some Cottage Hospitals in England, Scotland and Wales, a memorandum explanatory of the policy in regard to these schemes, laying special emphasis on the three fundamental principles referred to below. This is contained in Appendix VI.

Contributory Schemes are defined for the purposes of the policy of the Association as schemes to which contributions are made for which there is a stated or implied return, and the three fundamental principles of the Association's policy with regard to these schemes are:—

(1) that membership of contributory schemes should be governed by an income limit;

(2) that (except in emergency) a contributor to a scheme would only be admitted to hospital upon the recommendation of the attending practitioner; and

(3) that recognition is made of the services of the medical staff of the hospital attending members of contributory schemes.

Hospital Saving Association's Contributory Scheme.

168. Representations were made by the Council to the controlling body of the above-mentioned scheme (which operates mainly in and around London, and makes payments to co-operating hospitals in respect of the maintenance of contributors who are treated at those hospitals), to adopt as an integral part of the scheme the following principles contained in the Association's Hospital Policy, namely:—

(a) that contributors when attending hospitals should take with them a recommendation from their medical practitioner; and

(b) that the primary object of out-patient departments of hospitals should be for consultation.

The Hospital Saving Association is in favour of the first of these principles and has stated so in its instructions to its Group Secretaries (through whom contributors receive authorisation to attend hospitals) and at public meetings. What is now required is the adoption of this practice by general practitioners and hospital staffs.

The Hospital Saving Association also agrees with the principle that out-patient departments should be centres for consultations and specialist treatment.

Treatment of Patients Suffering from Early Stages of Mental Disease.

169. In connection with the setting up of clinics attached to voluntary hospitals for the treatment of patients suffering from the early stages of mental disease it has been learned that in some instances the Medical Superintendent of the County Mental Hospital has been placed in charge of these clinics. The Council does not consider this to be in the best interests of the patients.

The Council recommends:—

Recommendation: That specialist work in connection with the treatment of patients suffering from mental disease in its early stages whether at hospitals or clinics should not be carried out by whole-time medical officers of public health or local government authorities, but on a part-time basis by medical practitioners who have special knowledge of the subject but who need not necessarily be devoting their whole time to such special work.

Hertford British Hospital, Paris.

170. The Council has enquired into the circumstances connected with the dismissal in September, 1924, of the resident medical officer of this hospital and the consequent resignation of the other British members of the medical and surgical staffs of the hospital. As a result of a visit by Sir Richard Luce, M.P., and the Medical Secretary to Paris in November, 1926, when they conferred with a number of persons interested in this matter, including members of the Board of Management and members of the late medical staff, the Board agreed that His Majesty's Government should be asked to send to Paris a competent and reliable person who would consider the whole of the evidence and decide whether or not the Hospital Committee had been unjust in dismissing the late Resident M.O. Both sides agreed to accept the decision of such a person, and the Government has arranged for such an enquiry by Mr. Vaughan Williams, K.C.

Naval and Military.

Representative of the Indian Medical Service on the Council.

171. The term of office of Lt.-Col. F. O'Kinealy, I.M.S. (ret.), the present representative of the Indian Medical Service on the Council, expires at the termination of the A.R.M., 1927. Col. O'Kinealy is eligible for re-appointment. The Council recommends:—

Recommendation: That Lt.-Col. F. O'Kinealy, I.M.S. (ret.), be appointed the representative of the Indian Medical Service on the Council for the period 1927-30.

New Conditions of Service for the R.A.M.C.

172. Largely as a result of action taken by the Association, new improved rates of pay and conditions of service for the R.A.M.C. were introduced by the War Office as from July 1st, 1926. They were approved by the A.R.M., 1926, and the Council has expressed its indebtedness to Sir Richard Luce, M.P., the Chairman of the Naval and Military Committee, for the valuable help rendered by him in connection with this matter, both in Parliament and out.

173. Notwithstanding the improved conditions of service, however, the War Office is still experiencing difficulty in obtaining an adequate number of candidates for the Corps, and has recently been reduced to appointing temporary officers for service at home stations. As the future of the Corps depends upon an adequate supply of young doctors, the Council again draws attention to the opportunities for a career afforded by service in the regular Royal Army Medical Corps. The new conditions provide adequate remuneration, a gratuity of £1,000 after seven years' service to those who do not desire to remain permanently in the Corps, and valuable concessions affecting officers who have held, or are about to hold, resident appointments in hospitals. In view of the satisfactory conditions of service now obtaining, the Council feels that the Association should assist the War Office to the utmost of its ability to secure the right kind and number of young medical men. A special letter with this end in view is being sent to the college magazines of the various medical schools.

Marriage and Lodging Allowances for R.A.M.C. Officers Serving in India.

174. Marriage and lodging allowances for R.A.M.C. officers serving in India have now been approved by the Secretary of State for India, and take effect as from July 1st, 1926. As officers of other branches of the British Army serving in India received these allowances as from July 1st, 1924, the Council drew the attention of the India Office to the fact that officers of the R.A.M.C. were thus at a great disadvantage by the prolonged delay which had ensued in arriving at the decision to grant them the new rates, and pressed for the ante-dating of the rates to July 1st, 1924. The India Office stated in reply, however, that the revised marriage and lodging allowances were based upon the increased rates of pay for the R.A.M.C., which came into force from July 1st, 1926, and that it was not possible to make them retrospective beyond that date. The Council feels that no further useful action can be taken.

Employment of Qualified Pharmacists in the Army.

175. The League of Ex-Service Pharmacists asked the Council to support it in its efforts to secure the employment of qualified pharmacists in the Army. The Council, believing that the request was a reasonable one, has expressed itself in favour of the efforts of the League to secure that qualified pharmacists should be employed in the larger military hospitals.

Medical Benevolence.

176. During the twelve months ending December 31st, 1926, the amounts collected by the Association on behalf of existing medical charities were as follows:—

	£	s.	d.
Royal Medical Benevolent Fund	1,141	0	6
Royal Medical Foundation of Epsom College	841	2	3
Royal Medical Benevolent Fund Society of Ireland	35	13	0
Sir Charles Hastings Fund	17	8	11

In addition, the sum of £767. 10s. 3d. was received for distribution among existing medical charities at the discretion of the Trustees of the B.M.A. Charities Trust Fund. This amount, together with a balance of £457. 2s. 8d. brought forward from 1925, was distributed as follows:—

	£	s.	d.
Royal Medical Benevolent Fund	600	0	0
Royal Medical Foundation of Epsom College	400	0	0
Royal Medical Benevolent Fund Society of Ireland	50	0	0
Sir Charles Hastings Fund	124	12	11
Royal Medical Benevolent Fund Guild ...	150	0	0

It will thus be seen that altogether the Association passed on to medical charities in 1926 the sum of £3,259. 17s. 7d. This compares favourably with the amount collected in 1925, *i.e.*, £2,267. 19s. 8d., but is, of course, still very far from being satisfactory.

177. The Council considered the question of the best method of appealing for subscriptions and donations to the Charities Trust Fund and for increased support for medical charities generally, and came to the conclusion that the duty of collecting subscriptions should be laid on the Divisions, as the Council was convinced that local appeals would be more satisfactory than a central one. A memorandum (D. 11) was accordingly issued to Divisions containing suggestions as to the way in which appeals might be made and Divisions were advised to ascertain, first of all, which members of the profession in the area are already subscribing to medical charities, in order that they may not be troubled with further appeals.

178. At the present time the claims of the various medical charities are brought to the notice of members of the Association by means of the form of application for the annual subscription to the Association. It is, however, thought that this should be supplemented later in the year by a systematic appeal from the Divisions to local members of the profession at a time when financial calls are less numerous, poesibly in connection with the Annual General Meeting of the Division. Also, it has been suggested to Divisions that they should arrange an annual social function of some kind the proceeds from which, after paying expenses, might be forwarded to the Association's Charities Trust Fund. This suggestion has been acted upon already by several Divisions and looks like being generally adopted, with results that are bound to be satisfactory.

179. The Council aims at raising a steady income of at least £20,000 per annum for medical charities This sounds ambitious in view of the present feeble response of the profession, but if every member would accept it as part of his duty to his profession to give not less than a guinea a year to the Charities Fund, the position of the medical charities would be vastly improved and the reputation of the profession correspondingly raised.

Wales.

180. Though the Welsh Committee itself has not met so far this session, its Contract Practice Sub-Committee has been active in the interests of colliery and works doctors, which is one of the main concerns of the parent Committee.

The prolonged coal stoppage last year entailed great financial loss to colliery doctors, and meetings of the Sub-Committee and also one of colliery and works doctors have considered how best the situation should be met. It was resolved to leave the initiative to the doctors in each locality, and Division Secretaries and others concerned have been informed of the findings of the General Meeting.

Ireland.

181. Satisfactory progress with regard to membership of the Association continues to be made in Northern and Southern Ireland. If it were not for the large number of the younger members who leave Ireland every year to practise in Great Britain the total membership would be convincing of the satisfactory position of the Association in Ireland.

182. In the last annual report of the Council references were made to the Commissions in Northern and Southern Ireland inquiring as to whether the existing medical services were equal to the needs of the communities in these areas. The views of the profession were carefully prepared and put before both Commissions. It is believed the work of the Commissions is now completed and that the reports are about to be placed in the hands of the printers.

183. In the Free State two further Commissions of a medical nature, namely, the Poor Law Commission and Clean Milk Supply Commission, have been appointed. The terms of reference of the Poor Law Commission are to inquire into the adequacy and suitability of schemes which have been formulated under previous Acts and to make recommendations in regard thereto and generally to advise upon the system of relief of the destitute sick and poor, including the insane poor. The Milk Commission is taking evidence with the view of ascertaining what changes in the existing law and its administration are necessary to ensure a pure milk supply. On both Commissions there are members of the medical profession, including the Irish Medical Secretary.

184. The Department of Local Government and Public Health (Free State) has experienced some difficulty with the County Councils who in many instances have refused to provide funds for the appointment of whole-time county medical officers of health under the Local Government Act, 1925. The County Councils urge that the whole or at least half the cost of the salaries and travelling allowances of the medical officers of health should be paid out of State funds. To this claim the Department of Local Government and Public Health replies that the agricultural grant in aid of certain local rates has been doubled in recent years and that the grant alone is more than is required to pay the entire salaries of all the officials employed by the local authorities in the Free State. The Minister has, moreover, stated that the appointments must be made by the local authorities.

185. The outstanding legislation, affecting the medical profession, since the last report of the Council, is the Local Authorities (Officers and Employees) Act, 1926. This Act provides for the establishment of a Commission charged with the duty of selecting persons to be appointed to situations in the employment of local authorities. The main offices to which the Act applied includes amongst others every office under a local authority the qualifications for which are wholly or in part professional or technical. This provision means that all medical appointments hitherto made by the local authorities will, in the future, be filled by a body which will be known as the Local Appointments Commissioners. The Local Appointments Commissoners will, for medical appointments, appoint a Selection Board consisting of medical men who will recommend to the Commissioners the most suitable candidate for the vacancy. The Act is at present in operation. It has been recommended to the Appointments Commissioners on behalf of the profession that special consideration should be given to post-graduate experience and study.

186. The Coroners (Amendment) Act, 1927, has been recently passed through the Dail and Senate. The Act contains many changes in the previous law as it affected coroners and medical practitioners. The duty of viewing the body under the new Act is imposed on the coroner and not as formerly on the jury. The fees payable to medical witnesses have been revised and are as follows:—

(a) for attending to give evidence at any inquest whereat no post-mortem examination has been made by the practitioner, not exceeding two guineas;

(b) for making a post-mortem examination of the body of the deceased and reporting the result thereof to the coroner without attending to give evidence at an inquest, not exceeding three guineas; and

(c) for making a post-mortem examination of the body of the deceased (including the making of a report, if any, of the result thereof to the coroner) and for attending to give evidence at an inquest on the body, not exceeding four guineas.

Oversea Branches.

EAST AFRICAN MEDICAL SERVICE.

187. New regulations introduced for this Service towards the end of 1926 were considered by the Council in the light of representations from the Branches concerned. Generally speaking, the Branches seem to consider that the regulations, including the scales of pay, may be regarded as, in the main, acceptable so far as the officers who were already in the Service when the regulations were introduced are concerned. At the same time it is evident that the new entrant into the Service is in a position which compares unfavourably with that of his immediate seniors as regards ultimate total emoluments, apart from certain opportunities for promotion the value of which it is impossible to assess without information which the Council has been unable to obtain. The Medical Service as a whole is left, in relation to other branches of the Civil Service, in a less favourable position than formerly. The Council understands, however, that whatever may be expected to result from

practical experience of the new scales, there is at the moment no lack of suitable candidates for the Service, and in these circumstances it seems inadvisable to press the Colonial Office for any further concession at the present time, except as regards certain points of detail which are still open to discussion. The Council has therefore indicated to the Colonial Office that, whilst regretting its failure to secure the full measure of improvement for which it has worked, it does not at present propose to ask for any modification of the regulations, beyond those involved in points of detail. Those who contemplate entering the Service and who apply to the Office for information as to the pay and prospects will be given full information and left to make their own decision as to its advantages, it being pointed out to them that, apart from the question of the scale of pay, the Service seems to offer considerable scope to those who are attracted to this particular branch of medical work.

Malayan Medical Service.

188. The Council is gratified to be able to report that after some years of endeavour, its representations to the Colonial Office in respect of the salaries and conditions of the Malayan Medical Service have been recognised by the introduction of new terms and conditions which the Council considers are now on the whole satisfactory.

The only point of real substance contained in the Report of the Federated Malay States Medical Inquiry Committee (which Report was supported by the Association) which has not been met in the new conditions, is the proposal that the three Services should be unified, but this the Government has decided for political reasons is at the present impracticable.

A new Standing Advisory Medical Committee for Malaya has been appointed which may, to some extent, at any rate, act as a co-ordinating body.

The Council considers the new terms and conditions for this Service are such that it can advise medical practitioners to enter the Service, but is asking the Malayan Branch for its comments on the position.

Windward Islands Medical Service.

189. In 1923 the A.R.M. approved the insertion of an "Important Notice" in respect of this Service and the "Notice" is still appearing. The Council in that year decided that the minimum salary which the Association could approve for this Service was £400, rising by annual increments of £25 to £600, but the existing scale of salaries is £400 for the first five years and then by increments of £20 a year until £500 is reached at the end of 10 years' service.

Shortly after the publication of the "Important Notice," a local Ordinance was passed which legalised the registration of foreign practitioners in the Islands. Another Ordinance also regulates the fees which medical officers of the Service may charge to private patients. Both these Ordinances are strongly objected to by the Council.

In July, 1926, the Governor of the Islands stated he would consider the suggestions of the Grenada Branch for the improvement of the terms and conditions of medical officers of the Service, including the repeal of the Ordinances referred to above, but would not entertain the suggestion which the Branch had made for improvement of the scale of salaries. So far, however, no improvements have been made nor have the Ordinances been repealed, and therefore the "Important Notice" is still appearing.

The Council is gratified to be able to report that the Canadian and American Medical Associations have agreed to assist the Association in this matter by advising practitioners, so far as they can, of the conditions to which the Association takes exception.

Medical Officers to Overseas Commercial Bodies.

190. From time to time advertisements for medical officers for employment by commercial bodies overseas are submitted for publication in the *British Medical Journal*, and a number of these advertisements contain no statement as to the salary (and other emoluments, if any) which will be paid to the practitioner appointed. The Council has decided that unless the Association is informed of the terms and conditions of the appointment (not necessarily for publication) such advertisements will not be published in the *Journal*.

Bill to Regulate Medical Education in India.

191. A Bill "to regulate medical education in India" has recently been introduced, in which it was proposed to set up a "Council of Medical Education," one of the duties of which would be

> "the establishment of a qualification in independent schools or methods of medicine as shall empower the holders thereof to practise in all provinces in India."

The Branches in India were asked for their opinion and the Council of the Hyderabad Branch, which is the only one which up to the present has replied, is unanimously of opinion that nothing would be gained by having a separate register of practitioners of indigenous systems of medicine in India.

The Council referred the matter to the General Medical Council. It has since been learned that the Bill is not being proceeded with.

Medical Practice in Hong Kong.

192. The Council is pleased to be able to report that the Hong Kong Government has decided that as from the beginning of 1927, patients who can afford to pay will be charged fees for medical services rendered to them in Government Hospitals in addition to being charged for the bed or room occupied, thus avoiding unfair competition with outside practitioners.

ROBERT BOLAM,
Chairman.

APPENDIX I.

Return of Attendances

At Council Meetings, from the termination of Annual Representative Meeting, 1926, up to and including April 6th, 1927.

(Prepared pursuant to Standing Orders.)

Chairman: Sir Robert Bolam.

NAME.	ATTENDANCES. Actual.	Possible.
President: Hogarth [illegible]	6	7
President-Elect: [illegible]	1	7
Past President: Thomson	3	7
Chairman of Council: Bolam, Sir Robert, Newcastle-on-Tyne	7	7
Chairman of Representative Body: Brackenbury, H. B., London	7	7
Deputy-Chairman of Representative Body: Hawthorne, C. O., London	7	7
Treasurer: Harman, N. Bishop, London	7	7

APPENDIX III.

SCHEME FOR FORMATION OF GROUPS IN THE ASSOCIATION.

1. The Council shall have power to form Groups in the Association, but, nevertheless, shall not approve the formation of any Group unless it be shown that the ordinary machinery of the Association cannot be used.

2. A Group shall be composed of members of the Association who have common interests sufficiently distinct from those of the general body of members, and who by reason of their smallness in numbers and/or nature of distribution, are not able to meet to discuss those interests or to express their opinion in regard to them adequately through the Divisions and Branches of the Association.

3. If a sufficient number of members specially concerned shall petition the Council to the effect that they wish a Group to be formed, their request shall be considered by the Council, whose decision, subject to appeal to the Representative Body, shall be final.

4. If the formation of a Group be authorised, a list of those qualified to be members of it shall be made in the Central Office. Only the members on the list shall be considered to be members of the Group.

5. The Annual Meeting of the Group shall be held at the time and place of the Annual Meeting of the Association. Other meetings of the Group may be authorised by the Council.

6. The Group Meeting shall appoint a Committee not exceeding 6 in number.

7. The Group Committee may meet twice a year at the Head Office and at other times by consent of the Chairman of Council, the travelling expenses of the members of the Group Committee being paid in the usual way.

8. The Group Committee shall consider the opinions expressed at the Group Meeting, and may also take the opinion of members thereof by post, or, if so authorised by the Council, at a further meeting or meetings of the Group.

9. The findings of the Group Committee shall be placed before the appropriate Standing Committee of the Association, to whose meetings, when these findings are under consideration, the Group Committee, Chairman and one member of the Group Committee shall be invited and shall have the right to speak on those matters but not to vote. It shall be the duty of the Standing Committee concerned to place the Group Committee findings before the Council with the remarks of the Standing Committee. Any such findings approved by the Standing Committee concerned shall be submitted as recommendations of that Committee.

10. The Chairman of Council shall have power, if so requested by the Group Committee, to invite the Chairman or other specially designated representative of that Committee, to the meeting of the Council while matters considered by a Standing Committee in accordance with Rule 9 are being dealt with; and the Group Committee representative shall have the right to speak on those matters, but not to vote.

11. If no member of the Group Committee is in fact a member of the Representative Body, the Chairman of the Representative Body shall be authorised to invite not more than two members of a Group Committee to attend the A.R.M. and to speak on the matters specially affecting that Group, but not to vote.

12. The Council shall have power to dissolve a Group if and when in its opinion the need for its special organisation has ceased to exist.

APPENDIX IV.

MEMORANDUM OF EVIDENCE SUBMITTED BY THE BRITISH MEDICAL ASSOCIATION TO THE SUB-COMMITTEE OF THE COMMITTEE OF CIVIL RESEARCH ON THE EXISTING PRACTICE RELATING TO THE METHOD OF PREPARATION OF THE BRITISH PHARMACOPŒIA.

1. In response to the request of the Sub-Committee on the British Pharmacopœia appointed by the Committee of Civil Research that the British Medical Association should submit its opinion as to the existing practice relating to the method of preparation of the British Pharmacopœia, we have been instructed by the Council of the Association to forward the following observations:—

2. As the British Pharmacopœia establishes a legal standard for the substances described in it when these are dispensed or sold for medicinal use, the revision of the volume is a matter of great importance to the members of the medical profession. The Association claims to express the general views adopted by the profession, and as the membership of the Association is over 32,000, it will be realised that the collective opinion of its members is well worthy of consideration.

(A) *Responsibility for the Publication of the British Pharmacopœia.*

3. At present the British Pharmacopœia is, in pursuance of the Medical Act of 1858, Section 54, published under the direction of the General Medical Council, and the Association believes that opinion within the profession is definitely in favour of the continuance of the existing practice and wishes to leave the final and formal responsibility for future editions in the hands of the Council.

(B) *The Method of Preparation of the British Pharmacopœia.*

4. The practice of the General Medical Council has been to entrust the work of revision to a Pharmacopœia Committee (of twelve members), which, being an Executive Committee, is necessarily composed wholly of members of the Council. These members are appointed to the General Medical Council primarily to assist in the highly important duties connected with medical education and registration with which the Council has to deal under the Statute; it is improbable that any of them are appointed because of their special fitness for the work of preparing a Pharmacopœia. The Association appreciates that in the past the Pharmacopœia Committee, in dealing with the difficult task entrusted to it, has taken steps to obtain expert and authoritative information from various Committees of Reference, has instigated many practical researches and has sought information in many other directions. It is, however, felt that the method of compilation adopted by the General Medical Council is not the best that can be devised and the Association would suggest that it is essential that experts should have a voice in the editing of the volume. At the present moment they have no such voice, and the Association is convinced that any attempt to prepare another edition of the Pharmacopœia, on the lines of the 1914 edition, would break down, as the essential co-operation of all interests would not be secured.

5. The Association favours the suggestion made at the Conference held in February, 1926, of representatives of scientific bodies and the Pharmacopœia Committee of the General Medical Council, that:—

> "It is desirable that the revision of the British Pharmacopœia should be placed in the hands of a committee of experts appointed for that special purpose by the General Medical Council."

The highest degree of responsibility should be given to this Committee of Experts to make decisions, to initiate recommendations, and to explore the whole field of modern therapeutics. It would then remain for the General Medical Council to adopt or to refer back the conclusions of the Committee of Experts.

6. The Association suggests that a Committee of Experts should be appointed by the General Medical Council on such lines as the following:—

5 Members of the General Medical Council
and the following members nominated to them:—
1 by the Ministry of Health,
1 by the Scottish Board of Health,
1 by the Royal Society,
1 by the Royal Society of Medicine,
1 by the Medical Research Council,
2 by the British Medical Association,
1 by the Physiological Society,
1 by the Chemical Society,
1 by the Linnean Society,
2 by the Pharmaceutical Society of Great Britain,
1 by the Pharmaceutical Society of Northern Ireland,
1 by the Pharmaceutical Society of Ireland,
1 by the Society of Analysts.

This would mean a Committee of twenty members representative of the chief interests deserving of consideration. Much of the work would necessarily fall to be done by means of Sub-Committees to which further experts might be co-opted.

(C) *Continuity of Work.*

7. With the constant changes that are taking place in therapeutic practice it is essential that the work of the revision of the Pharmacopœia should be continuous. On the appearance of one edition the Committee should be deemed to be discharged and a new Committee appointed in like manner, retiring members being eligible for re-appointment.

8. The Revision Committee should have such financial resources as to be able to appoint and pay a suitable Secretary

and to conduct or direct such tests or other research work as they may think necessary for the proper performance of their work.

(D) *Adaptation of the British Pharmacopœia to the Needs of the British Empire.*

9. In the opinion of the British Medical Association, the result of the attempt made in 1914 to produce a Pharmacopœia to serve the needs of the whole Empire has not been entirely satisfactory. It appears to the Association that certain drugs and preparations used in tropical climates or in restricted parts of the Empire only, should be placed in a separate Volume or Addendum. Questions relating to this proposal might be decided in consultation with the Governing bodies in India and the Dominions and with the other authorities concerned.

10. If it be finally decided that the new Pharmacopœia is to serve the needs of the whole Empire, the Association supports the suggestion that—

> "It is desirable that the Governments of India and of the Dominions be requested, if they think fit, to appoint Expert Committees to work in co-operation with the Committee for Great Britain."

(E) *Scope of the Pharmacopœia.*

11. The Association suggests that the Pharmacopœia should contain, so far as is practicable, all those drugs and preparations which experience shows to be in common use by medical practitioners and which, in the interests of the public, require a standard method of preparation or a standard of strength or a standard of purity; provided that such drugs and preparations have a therapeutic or diagnostic value or are pharmaceutically necessary.

(F) *Need for Economy.*

12. Another important matter to which the Association wishes to direct attention is that due regard to economy should be given in considering the inclusion or otherwise of any preparations in the British Pharmacopœia.

13. The provision of an official name, and an official standard for a preparation will generally speaking reduce its price. If there are preparations equally effective, one of which is cheaper than the other, the cheaper preparation should be included either along with or in preference to the other.

14. It would probably be found possible to add to the Pharmacopœia preparations of certain drugs, particularly sweetening and flavouring agents which, whilst equally efficacious, are much cheaper than those at present included.

In this connection special regard should be had to any Drug Tariff issued under the National Health Insurance Acts.

APPENDIX V.

MEMORANDUM OF EVIDENCE SUBMITTED BY THE BRITISH MEDICAL ASSOCIATION TO THE PRIVY COUNCIL COMMITTEE ON THE POISONS AND PHARMACY ACTS.

I. The British Medical Association, representing as it does the majority of the medical profession in this country, is naturally interested in all matters appertaining to the practitioner and the materials with which he has to work. It is therefore interested in the conditions relating to the sale of poisons. As the Association has not had access to the evidence which has been given before the Committee, the evidence to be given by the Association may perhaps not be of as much value as the Association would wish. If the Committee desires specific information on points that have already been raised before it, the witnesses representing the Association will do their best to give that information, and if they are unable to do so when they are heard on 4th March, would be willing to use the machinery of the Association either for obtaining such information as is required or for asking the opinion of its members on any points which the Committee would desire specifically to be put to them.

II. The Association makes the following commentary on the questionnaire which has been sent to it by the Committee:—

> *Question 1*: Do you think that, generally speaking, the conditions relating to the sale of Poisons, as laid down in the Poisons and Pharmacy Acts are satisfactory, or are you of opinion that certain modifications are desirable or necessary?

Excepting on one point the Association has no reason to suppose that the conditions relating to the sale of poisons as laid down in the Poisons and Pharmacy Acts are unsatisfactory. That exception has regard to Section 3 (1) of the Dangerous Drugs and Poisons Act of 1923, which requires that a seller of any Poisons in Part 1 of the Schedule of Poisons shall not supply them except on receipt of an order in writing signed by the purchaser giving the name and address of the purchaser, and the name and quantity of the article purchased. This, in the opinion of doctors in dispensing practices, and of all the sellers of the articles whose opinion we have taken, is totally unnecessary with regard to the Poisons and is regarded by all as a nuisance. The position is made more invidious for the doctor by the fact that apparently no ceremony of the kind is necessary when a retail chemist buys these poisons from a wholesaler. The Association takes no exception to the Clause so far as Dangerous Drugs are concerned, but it trusts that if, as it hopes, the Committee recommends the consolidation of the Acts relating to the sale, etc., of poisons it will recommend the rescission of this Clause so far as Poisons are concerned.

On the general question of the conditions relating to the sale, etc., of poisons, the Association has to report that there has been a practically total absence of complaint and our experience would lead us to believe that had there been any serious dissatisfaction we should have heard of it.

> III. *Question 2*: Have you any criticisms or suggestions to offer with regard to the present procedure for the modification or extension of the Schedule of Poisons to which the Acts apply?

If the Committee has reason for thinking that the present procedure for the modification or extension of the Schedule of poisons is not satisfactory, the Association would submit a method which it would probably be agreed would be more in accordance with present-day custom. That is to say, if we were beginning afresh and were asked what kind of machinery should be set up for the purpose of modifying or extending the Schedule of Poisons, the Association would suggest a Committee composed of representatives of the Ministry of Health, the Home Office, the Pharmaceutical Society of Great Britain, the Royal College of Physicians, the British Medical Association and the Society of Apothecaries. This Committee would consider all suggestions made to it by any of the bodies represented on it, or by any other responsible person or authority and would make recommendations to the Government Department concerned. This Department the Association considers should be the Ministry of Health, for the Association is strongly of opinion that all questions concerning the medical and kindred professions should be brought under the ægis of the Ministry of Health, except with regard to those matters which are under the control of the General Medical Council. The Ministry of Health could quite well arrange for co-operation with the Home Office in so far as that Department is concerned with the legal aspect of poisons.

> IV. *Question 3*: Do you regard the present division of the Poisons Schedule into Parts I. and II. as sufficient, or would you be in favour of further sub-divisions which would on the one hand impose conditions more stringent than those governing the sale of substances included in Part I, and on the other hand provide safeguards for certain other substances where some restriction as to sale is desirable but where a sufficiently strong case could not be made out for inclusion in Parts I and II as at present constituted?

The Association is of opinion that there should be three if not four groups in the Schedule of Poisons:—

> (a) Poisons used in Agriculture, Horticulture and Commerce. These should be sold only by qualified persons or by persons licensed by the Local Authorities as prescribed in Section 2 of the Poisons and Pharmacy Act of 1908. We would suggest that articles in this class should be put up in wrappers or containers labelled "Poison" having printed on the label the name of the poison, the approximate strength of it and the most practical antidote for use in case of poisoning. The group should contain arsenic and all the poisons mentioned in Sections 2 and 5 of the Poisons and Pharmacy Act, 1908, and any others that may be added by the proper authority.
>
> (b) The present Part I. Poisons.
>
> (c) The present Part II. Poisons.

V. There is another group of what may be called "Habit-forming Drugs," typically exemplified by the Barbituric Acid group, which the Association is of opinion might properly be dealt with either by placing them in a fourth division of the Schedule or placing them in Part III. of the Dangerous Drugs Act, 1920. The chief advantage of such a discrimination as regards these drugs would be the ability to prevent repetition.

> VI. *Question 4*: If the Schedule be thus extended in an upward direction to include a sub-division governed by conditions more stringent than those at present obtaining under Part I., do you think that this expedient could be made to serve as a

half-way house between the restrictions of the Dangerous Drugs Acts and the provisions of Part I. in the case of potent drugs?

See answer to Question 3.

VII. *Question 5*: If your answer is in the affirmative, what conditions would you feel inclined to impose in the case of substances which it is thought desirable to include in this higher division of the Schedule with a view to safeguarding adequately the public without putting unnecessary obstacles in the way of employment of the drugs in the treatment of disease

See answer to Question 3.

VIII. *Question 6.* It has been suggested that the qualifications of the dispensers in Hospitals and other similar Institutions should be those required of persons at present authorised by the Pharmacy Acts to keep open shop for the compounding and dispensing of Poisons. Have you any views upon the point?

The Association is in favour of the holders of positions as dispensers in hospitals and similar institutions being required in future to hold some qualification either as a Pharmacist or as a holder of the Assistant's diplo[illegible]e Society of Apothecaries or some similar

IX. *Question 7*: It has also been suggested to the Committee that registered pharmacists should alone be permitted to dispense medicines containing poisons except in emergencies and where no pharmacist is accessible. Have you any remarks to make upon this suggestion?

The Association is not in favour of the suggestion that only registered pharmacists should be permitted to dispense medicines containing poisons except in emergencies and where no pharmacist is accessible.

X. At the present time medical practitioners have a right to dispense *any* medicines and the Association would strongly oppose any attempt to take away that right. To support such a change it would have to be shown that the public suffers from the present position of affairs and the Association knows of no complaints on this score. Reference to the Registrar-General's Reports on the causes of death discloses no marked increase in the numbers of deaths from poisons, and the Association is not aware that it has ever been suggested that of the deaths from poisoning that do occur any appreciable number can be traced to the dispensing done by or on behalf of doctors in private practice. The public in most parts of England and Wales get the medicines which are prescribed for them by their doctors from the dispensaries of those doctors. Insured persons in areas where a chemist is available get their medicines from a chemist, but it must be remembered that even there the doctor has to dispense in emergencies, which means generally whenever the chemist has retired for the night or left his premises as a very large number do after business hours. Dispensing by doctors is regarded by the public as a convenience and it is also a right possessed by the doctor which has never been seriously challenged. Whether the doctor dispenses the medicines himself or has them dispensed by a dispenser in his employ the doctor is equally responsible; and the Association would submit that the doctor who is responsible for the treatment of the patient is at least as much concerned as anyone else could be with the safety and convenience of his patient.

XI. The position of the doctor's dispenser is very different from that of the pharmacist keeping open shop. The former deals with the dispensing of one man (or perhaps a partnership) with whose ways he is thoroughly familiar. The latter must be capable of dealing with the various methods of prescribing of the whole profession and with the requirements of the public. He is a pharmacist and not a mere dispenser.

XII. Again it is to be noted that dispensing is not, for the purposes of the doctor who owns his own dispensary, nor even (but to a lesser extent) for the pharmacist, the complicated matter that it used to be. A very great deal is done for the dispenser by the wholesale druggist who now provides in an easily handled form many of the things which at one time took a great deal of time and needed a good deal of skill in making up. The more difficult preparations are naturally still left in the hands of the pharmacist.

XIII. Moreover if the doctor were to be prevented from dispensing medicines containing poisons, except in emergency and in rural districts, he might as well be prevented from dispensing any kind of medicines, for a large proportion of this prescriptions contain poisons. It would not be worth his while keeping a dispensary for the remainder. If the doctor were deprived of his right to dispense the pharmacist would naturally have to be prevented from counter prescribing, and the Association sees no practicable way of enforcing anything of the kind. The average pharmacist, being a law-abiding person, would, if such a law came into force, undoubtedly do his best to keep it, but is he to be prevented for example from making up a probably harmless mixture containing say, a minute dose of Nux Vomica for a patient who complains that he is "run down" and requires a tonic and does not want to be bothered to go to the doctor, or wishes to avoid the expense? It is difficult to believe that the public would stand being told that they must go to the doctor in every case where the appropriate medicine might contain small doses of poisonous substances, unless able to produce a prescription for what they want. Further, there is the increased cost to the community. No arrangement could be arrived at dividing the prescribing and the dispensing between the doctor and the chemist which would not increase the total cost to the public. The Association therefore is not in favour of any restriction of the right of the doctor to dispense his medicines, whether containing poisons or otherwise.

XIV. *Question 8*: Are there any other matters coming within the Committee's terms of reference to which you desire to draw attention?

The Association hopes that the Committee will recommend the consolidation of the Acts and Orders relating to the sale of poisons and at the same time trusts that the Committee will not be induced, without the very strongest reasons, to recommend the imposition of further restrictions on either doctors or pharmacists with regard to the purchase, storing or dispensing of poisons. Medical men and pharmacists are accustomed to deal with poisons and have to do so very frequently every day. We have no right, of course, to speak for pharmacists as a class, but we can say that doctors find that on the whole the work of the pharmacist is done carefully, skilfully and conscientiously, and they have a right, on their record, to be trusted in professional matters for which they are specially trained and recognised by the State.

XV. Speaking for the medical profession, the Association would submit that it ought to be assumed that practitioners have the interests of their patients sufficiently at heart to take the necessary care in dealing with poisonous drugs just as they do with other potentially dangerous means of treatment. The Association took an active part in advising and helping the Home Office when it introduced regulations dealing with Dangerous Drugs—a class of medicament which admittedly raises an acute social problem. But medical men as a whole would strongly resent having placed upon them with regard to the ordinary poisons restrictions approaching in severity the Dangerous Drugs Regulations and as at present advised the Association sees no need for further restrictions.

APPENDIX VI.

MEMORANDUM SUBMITTED BY THE COUNCIL ON ORTHOPÆDIC HOSPITALS AND CLINICS.

AUTHORITIES AND FINANCE.

State funds from rates and taxes are available for treatment of crippled children and of persons *of any age* crippled by non-pulmonary tuberculosis.

Orthopædic Hospitals are in almost all instances Voluntary Hospitals taking charity cases as well as those for whom capitation payments are available.

Central departments responsible are the Ministry of Health and the Board of Education.

Local Authorities:—
Local Health Authorities,
Education Authorities,
Boards of Guardians.

Within any one administrative County there may be many such independent authorities for one or more parts of the work.

The Ministry of Health is responsible for:—

1. Patients suffering from tuberculosis, whatever their age, under the Public Health (Tuberculosis) Act, 1921.

2. Infants and children up to five years of age under the Maternity and Child Welfare Act, 1918.

The Board of Education is responsible for non-tuberculous children of school age, normally 5 to 16, but also from 2 to 5 if provision is made for their education.

The Ministry of Health does not pay any grant directly to a hospital. All grants and arrangements for admission to hospital are made through the Local Authority.

If children of school age are sent into hospital by any person or authority other than a Local Education Authority,

the Board of Education pays a direct grant to the hospital not exceeding £24. 10s. 0d. per annum per unit of average school attendance.

Before any arrangement can be made hospitals and their charges must be approved by the Ministry of Health or by the Board of Education.

The capitation rate is arrived at by the hospital submitting an annual balance sheet to the Board of Education giving in detail the costs of maintenance, treatment and education.

The charges must not exceed the actual cost of these services.

Local Health Authorities may, and Local Education Authorities must, collect from the parents of the patients whatever sum is considered fair.

Similar arrangements can be made for treatment in clinics whether patients have received in-patient treatment or not.

NATURE OF THE WORK.

The work involves the early discovery of the cripple, efficient treatment, after care and the education of the patient during the time he is under observation.

The actual treatment both at clinic and hospital must clearly be largely, if not entirely, of a specialist nature. In many of the existing clinics the principal work is carried out by an orthopædic surgeon assisted by trained orthopædic nurses. As a rule the surgeon is on the staff of a general or orthopædic hospital. He visits the clinics periodically and sees both new cases and cases which, having been into hospital, require after treatment. The nurse carries out his instructions in the intervals between his visits.

The general practitioner seems to have been usually overlooked both in actual schemes at work and in publications purporting to put forward ideal schemes.

Girdlestone, in his monograph "The Care and Cure of Crippled Children," certainly insists on the importance of ensuring the willing co-operation of the local doctors but assigns no particular functions to them. He stresses the fact that the whole scheme is voluntary from start to finish. On the question of remuneration he points out that the orthopædic surgeon has special financial difficulties as the majority of crippled children belong to the poorer classes. For this reason, he says, "there is much to be said for the payment of the visiting orthopædic surgeons by the hospital on a part-time basis," and also says that the hospital can set aside a certain proportion of the capitation payments made by local authorities for this purpose.

He visualises the staffing of clinics in the future by young surgeons who have been house men in orthopædic hospitals and suggests that if they can get a fee of say three guineas for attending clinics it will induce them to settle down in country towns with a good hospital with a view to getting on the staff.

It seems that as much of the work at clinics must be of the nature of specialist treatment, the sphere of the general practitioner until he has acquired the necessary knowledge and skill will be confined to the discovery of early crippling conditions and to such after care as he can carry out either at the clinic or in the patient's home, under the direction of the orthopædic surgeon. Meanwhile it should be open to him to put in as much time as he can at the clinic with a view to acquiring skill which will enable him to become competent to take an active part in the work of the clinic.

It is understood that in the clinics attached to the Wingfield Hospital, Oxford, any practitioner may bring his patients to the clinic and attend them there.

It is clear from such information as has come to hand that in trying to regulate rates of remuneration, particularly as regards operative work that necessitates treatment at a hospital, the Association is going to find itself up against the old difficulties, the honorary status of some of the orthopædic surgeons, the in-patient letter and the hospital contributory scheme.

A COUNTY SCHEME.

(*See* "The Cripple," by Frederick Watson, 23 *et seq.*)

The following is a County scheme as outlined by C. E. Humphreys, the C.M.O. Montgomeryshire.

There should be:—

1. Provisions for the prevention and early detection of crippling.
2. Provisions for ascertaining the number of cripples and the nature of their defects.
3. Provisions for remedial facilities:—
   (a) An Orthopædic Hospital.
   (b) Orthopædic Clinics.
4. Provisions for following up and ensuring regular attendance at the clinics.
5. Provisions for after care by committees of voluntary workers.

The orthopædic hospital should be an open air hospital and if it is a general hospital it should have an open air hospital run in connection with it with sufficient beds to give cases prolonged treatment.

The surgeons appointed must have had special experience in orthopædic work and a proportion of the nurses must be trained in orthopædic work.

After care clinics should be set up and run in close association with the Central Orthopædic Hospital. They should be not more than a day's return journey from the central hospital.

SOME WORKING SCHEMES.

The following are particulars of some actual schemes in being, and a good deal of further information is contained in the Report of the Central Committee for Care of Cripples, 1924 and 1925.

The Shropshire scheme with its 300 bed open air hospital at Gobowen caters for Shropshire, Herefordshire, and a good deal of Wales. It has after care clinics in Denbighshire and Flintshire and is arranging for them in Montgomery and Monmouth. It is staffed by visiting surgeons from London, Birmingham, Cardiff and Liverpool.

Oxfordshire has a complete county scheme centred round the Wingfield Orthopædic Hospital. It has three general hospitals attached to it at Reading, Aylesbury and Windsor and clinics at Banbury, Stow-on-the-Wold, Witney, Wantage, Newbury, Wallingford, Sandhurst, Wokingham, High Wycombe, and Newport Pagnell.

Each patient at the Wokingham clinic pays 3d. per attendance.

It is stated that none of the surgeons in this scheme are paid for either hospital work or clinic work; that general practitioners are not utilised as paid units at the clinics and that domiciliary visiting is done by the orthopædic nurses.

Gloucester County has not yet a fully developed scheme of its own. It sends cases of surgical tuberculosis to the Cheltenham General Hospital and for other orthopædic cases has made use of the Hereford Clinic and the Shropshire Hospital.

An orthopædic nurse has been appointed:—

(a) to visit out stations and assist the orthopædic surgeon;

(b) to supervise cases and give any immediate treatment required—adjusting and removing splints.

(c) to examine appliances supplied by the Committee.

The M.O.H. in his annual report says the nurse has reviewed many of the cases in their homes and will attend regular clinics both with the orthopædic surgeon and intermediately at the out stations.

Information has been collected by the Council with respect to clinics established throughout the country, some of which are attached to voluntary hospitals.

COMMENTS AND SUGGESTIONS.

It is clear that there are growing up somewhat insidiously all over the country schemes for orthopædic treatment, partly under voluntary and partly under State auspices, partly under Education Authorities and partly under Public Health Authorities, which schemes appear to be of a somewhat haphazard or experimental character.

It would be unfortunate to allow these developments to proceed much further without warning the profession and public of certain possible dangers and laying down one or two general principles that ought to be observed in all schemes.

It is suggested that the chief dangers are:—

1. The establishment of yet another segregated public health service, with its separate institutions and whole-time specialist officers.
2. The withdrawal of a large number of cases of a special type from those hospitals in which medical education is carried on in connection with medical schools, so adding to the difficulties of securing an adequate knowledge of such conditions among medical practitioners in general.
3. The ignoring of the general practitioner altogether or his perfunctory use in connection with this work.

Action on the above lines would result in reducing the experience of the private practitioner (specialist and general) and consequently his value to the community.

Association Notices.

TABLE OF DATES.

April 23, Sat. Last day for receipt at Head Office of nominations: (i) by a Division of not less than 3 members, for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.

May 7, Sat. Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.

May 10, Tues. Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.

May 14, Sat Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.

BRANCH AND DIVISION MEETINGS TO BE HELD.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—A meeting of the West Dorset Division will take place on Friday, April 29th, at the Durlston Court School, Swanage, near the Children's Hospital, at 2.45 p.m. Cases will be shown and a paper read by Dr. W. A. Rees, O.B.E. Tea will be served afterwards at the Trocadero Restaurant by the courtesy of the Swanage members. A report and recommendations of the Divisional Ethical Committee will be brought forward.

KENT BRANCH: DARTFORD DIVISION.—A general meeting of the Dartford Division, to which all practitioners in the Dartford area are invited, will be held at the King Edward Avenue Hospital, West Hill, Dartford, on Wednesday, April 27th, at 3 p.m. Agenda: Anaesthetic fees (national health insurance); midwifery fees; antenatal clinics; maternity homes. At 4 p.m. a paper will be read by Mr. A. L. MORETON, M.S., F.R.C.S., medical superintendent of the Alexandra Hospital for Children with Hip [illegible] pains, or the diagnosis of certain chronic af[illegible] the joints of children."

LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.—The annual meeting of the Rochdale Division will be held in the Education Offices, Lyceum, Ballie Street, Rochdale, on Wednesday, April 27th, at 8.30 p.m. Business: Annual report for 1926; election of representative, deputy representative, officers, and Executive Committee for the ensuing year.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, May 3rd, at 9.30 p.m. Dr. H. C. Lucey will read a paper on clinical pathology.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—A meeting of the Willesden Division will be held at St. Andrew's Church Hall, High Road, Willesden Green, on Wednesday, April 27th, at 9 p.m. Agenda: Minutes, correspondence, etc.; consider Annual Report of Council (BRITISH MEDICAL JOURNAL SUPPLEMENT, April 23rd); any other business.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, April 29th, at 8.15 p.m. Dr. L. G. Parsons, physician to Queen's Hospital and the Children's Hospital, Birmingham, will give an address on "Some points in the diagnosis and treatment of pneumococcal infections in childhood." Tea and coffee will be served at 8 p.m.

NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.—It is proposed to hold an annual dinner of the Bishop Auckland Division on Friday, April 29th, at 7.30 for 8 p.m., in the King's Café, Newgate Street, Bishop Auckland. Tickets £1 1s. each (inclusive of wines). Guests may be invited.

OXFORD AND READING BRANCH: OXFORD DIVISION.—A clinical meeting of the Oxford Division will, by invitation of the local practitioners, be held at the Horton Infirmary, Banbury, to-day (Friday, April 22nd), at 3 p.m. Professor G. E. Gask, C.M.G., D.S.O., director of Surgical Unit, St. Bartholomew's Hospital, will read a paper on "Some operations for gastric ulcer," illustrated by lantern slides. Clinical cases will be shown by members of the honorary staff of the Horton Infirmary and others. On Thursday, April 28th, the South-West Division of the Royal Medico-Psychological Society is meeting at the Mental Hospital, Littlemore. Cases will be shown from 2.30 to 4 p.m. Those members of the Division who intend to be present and to take tea are asked to notify Dr. Good.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.—A clinical meeting of the Portsmouth Division will be held on Thursday, April 28th, at 3 p.m., at the Royal Portsmouth Hospital (Out-patient Department). 3 p.m., Examination of cases; 3.45 p.m., tea, provided by the staff of the hospital; 4 p.m., discussion of cases in Board Room. The meeting will end promptly at 5 p.m.

SUFFOLK BRANCH: WEST SUFFOLK DIVISION.—A clinical meeting of the West Suffolk Division will be held at the Angel Hotel, Bury St. Edmunds, to-day (Saturday, April 23rd), at 8 p.m. Sir Thomas Horder, Bt., K.C.V.O., physician to St. Bartholomew's Hospital, has kindly promised to open an informal discussion on "What are the most useful methods of supplementing clinical diagnosis?" Arrangements have been made for members attending the meeting to dine together, and Sir Thomas Horder's paper will be read after dinner. Dinner (at 8 p.m.), price 5s. Morning dress.

SURREY BRANCH: GUILDFORD DIVISION.—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital on Thursday, April 28th, at 4 p.m. Dr. J. A. Ryle will read a paper on "Modern views on diathesis." Tea will be served at 3.45. At a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, to be held on May 19th, Professor Hobday will open a discussion on clean milk. Further particulars will be announced later.

SUSSEX BRANCH: BRIGHTON DIVISION.—A conjoint meeting of the Brighton and Hove Association of Pharmacy and the Brighton Division of the British Medical Association will be held at the Queen's Road Dispensary, Brighton, on Wednesday, April 27th, at 8.30 p.m. Dr. Donald Hall, F.R.C.P., will open a discussion on "Therapeutics—thirty years ago and now." It is hoped that as many members as possible of both associations will attend and take part in the debate.

Meetings of Branches and Divisions.

BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

A MEETING of the Nuneaton and Tamworth Division was held at the Nuneaton General Hospital on April 6th.

It was decided to hold the annual dinner on the second Wednesday in May in Nuneaton, and the arrangements were left to the Executive Committee.

Dr. P. C. CLOAKE read a paper on "Neuritis and its treatment." He described the pathology of the condition, etiology, symptoms, both general and local, and diagnosis. With regard to the latter, he mentioned the importance of local pain, tenderness along the affected nerve, and loss of power and wasting in the muscles supplied by the nerve. He described various varieties of neuritis and entered very fully into the question of treatment, mentioning the great importance of the general factor in the more acute cases, and the importance of treating foci of infection, such as apical abscesses of the teeth, colitis, pyelitis, gleet, etc. He also described the use of autogenous vaccines in these cases. He entered into the question of local treatment, alluding to radiant heat, diathermy, massage and electricity, etc., and discussed the indications for their use, and described methods of preventing deformities. He also described medicinal and operative treatment.

A discussion followed in which Drs. H. PRICE, E. NASON, L. E. PRICE, DUDLEY, and POWER took part.

Dr. CLOAKE having replied, a vote of thanks for his valuable address was carried unanimously.

It was decided to communicate with the local members of Parliament regarding the Dogs' Protection Bill.

BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.

THE second regular meeting for 1927 of the West Bromwich Division was held on April 5th.

It was brought to the notice of members that under the Puerperal [illegible] which came into force on October 1st, 1926, local [illegible] he notifying doctor so desired, provide, *inter* [illegible] should see the patient.

The attention of members was drawn to the fact that under the Coroners Amendment Act, 1926, all medical fees in connexion with inquests would be increased by 50 per cent.; also that if, as a result of a *post-mortem* examination performed at the request of the coroner, an inquest was saved, the doctor, in addition to the 31s. 6d. for the *post-mortem* examination, would receive 10s. 6d.

for his report. The inquest fee, as from May 1st, would be £1 11s. 6d. a day, instead of £1 1s. for the whole inquest, however long.

The British Medical Association circular on medical charities (D.11) was read in full to the meeting. After some discussion it was agreed to leave the whole matter to the Executive Committee, who would prepare a scheme.

Dr. LEWIS GRAHAM (Birmingham) opened a discussion on "Some points in the conduct of midwifery in private practice." Dr. Graham's remarks and hints were highly appreciated.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.

A SUCCESSFUL meeting of the Bournemouth Division was held on April 7th in the St. Peter's Hall, Bournemouth; Dr. A. D. EDWARDS was in the chair and there was a good attendance of members.

Dr. E. K. LE FLEMING was again unanimously nominated as a candidate for election as member of the Council of the Association.

Dr. ROBERT HUTCHISON gave a very instructive British Medical Association lecture, entitled "Diet in infancy and childhood." After the lecture several members put questions to Dr. Hutchison, which he answered. On the motion of Dr. HYLA GREVES, seconded by Dr. JOHNSON SMYTH, a vote of thanks to Dr. Hutchison for his very interesting lecture was carried with acclamation.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

A MEETING of the West Dorset Division took place on March 31st at the Weymouth and District Hospital. Despite the weather there was a large attendance.

Dr. C. J. Marsh was unanimously elected representative, and Dr. O. Rees deputy representative of the Division for the year 1927-28.

Mr. R. L. HORTON showed (*a*) a case of tumour of the neck, with a suggested diagnosis of Hodgkin's disease; (*b*) a girl of 16 suffering from Hodgkin's disease; (*c*) a case of acute poliomyelitis who apparently had had a second acute attack over two months after the first.

Dr. C. M. FORBES showed a case with tumours in the right arm and forearm. It was suggested this might be due to neuro-fibromatosis.

Dr. O. REES showed a mother and daughter who both frequently dislocated both their patellae externally. The grandmother, now dead, had the same habit.

Dr. G. R. ALDRED-BROWN showed a case of recurrent scarlatiniform erythema with subsequent desquamation.

Dr. KING FRETTS showed a girl of 16 who had a long growth of hair in the sacral region, probably a dermoid.

Refreshments were served. Afterwards Mr. J. WHITTINGDALE, F.R.C.S., read a paper entitled "*Chronic pain in the right iliac fossa.*" He was followed in an interesting discussion by Drs. H. L. TASKER, R. L. HORTON, A. GRAY, E. W. SMERDON, F. L. NASH-WORTHAM, and O. REES.

JAMAICA BRANCH.

THE monthly meeting of the Jamaica Branch was held in the Leper Home at Spanish Town on February 17th. Dr. WILSON, senior medical officer, opened the discussion on leprosy, and Dr. CAMPBELL read a paper on the treatment of the cases at the home. Many cases were demonstrated to the seventeen members who attended. Dr. Campbell entertained the visitors to tea at the Rio Cobre Home.

METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.

A CLINICAL meeting of the Tower Hamlets Division was held on April 6th at St. Peter's Hospital, Whitechapel, when about forty members were present.

Dr. A. RANDLE showed two cases of perforated pyloric ulcer on which he had operated, occurring in men aged respectively 72 and 22, and illustrating the wide extremes of age at which this catastrophe was possible. Dr. E. MAPOTHER demonstrated cases exhibiting mental symptoms associated respectively with a physical basis (uterine tumour) and endocrine disorder. Dr. FANNING showed a specimen and drawings from a case synophthalmia. Dr. THOMPSON showed cases of tertiary syphilis and described the treatment. Dr. MARIAN showed cases of acromegaly and congenital cystic kidneys. He also demonstrated an appliance fitted to the ends of crutches and artificial legs, the principle of which was a steel spring acting as a shock absorber. A discussion ensued, and the proceedings terminated with a vote of thanks to Dr. A. Randle, medical superintendent of St. Peter's Hospital.

SOUTH INDIAN AND MADRAS BRANCH.

THE annual general meeting of the South Indian and Madras Branch was held on March 5th at the General Hospital, Madras, under the chairmanship of Major-General F. H. G. Hutchinson, C.I.E., K.H.S., I.M.S.

On the motion of Major J. A CRUICKSHANK, seconded by Dr. H. RANGAPPA, the accounts of the Branch for 1926 were passed and the annual report recorded.

The following members were elected office-bearers for 1927:

President, Major-General F. H. G. Hutchinson, C.I.E. *Vice-President*, Lieut.-Colonel E. W. C. Bradfield, M.S., C.B.E. *Secretary*, Major Clive Newcomb, I.M.S.

The action of the secretary in purchasing venereal films from the British Social Hygiene Council was approved. It was resolved that the Council should draw up rules for the custody and use of the films. It was resolved that one meeting a month should be arranged by the honorary secretary from July to February each year. The question of framing rules for the grant of Branch funds for research was referred to the executive committee.

YORKSHIRE BRANCH: WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.

A LECTURE meeting of the Wakefield, Pontefract, and Castleford Division was held at the Great Bull Restaurant, Wakefield, on April 7th, under the chairmanship of Dr. GIBSON.

Mr. G. L. WILKINSON, M.R.C.S., L.D.S., gave a very interesting lecture on conservative dentistry. He considered that Mrs. Mellanby's experiments were a useful addition to knowledge in the matter of dental caries. Summarizing her conclusions, he emphasized that vitamin A was the chief essential and that calcium was of secondary importance to this, and that some cereals—for example, oatmeal—inhibited calcification of teeth; it was found that white flour and rice were probably the least harmful of the cereals. Cod-liver oil was the best known source of vitamin A, and if a diet containing this and milk were given to growing children and also to the expectant mother, it was thought that the incidence of dental caries would be diminished. Another suggestion at the present time was that dental caries might be due to lack of endocrine balance. Mr. Wilkinson stated that a carious temporary molar, if left in the mouth, would lead to caries of the permanent teeth beneath it. He dealt with the question of apical infection, and said that all such areas could satisfactorily be cleared up without extraction of the tooth, provided the patient was in good health and that definite bony regeneration took place if this was properly done. He considered that a good *x*-ray photograph carefully read was of considerable value in conservative dentistry.

The following members took part in the subsequent discussion: DRS. GIBSON, RADCLIFFE, BUTLER, TOWNEND, STEVEN, and HILLIARD.

Correspondence.

State and Municipal Health Services.

SIR,—I think that this is an appropriate time to call the attention of the profession to the activities of county councils in the direction of State socialism by allowing their medical officers to enlarge the scope of their work at the expense of the general practitioner. To take the instance of our own area, the Holland Division of Lincolnshire, our medical officer of health has recently added to his two qualified assistants a third, and to his health visitors two more—this at a time when the nation is calling out for economy in Government departments. What is more, he has announced in the local press the benefits that any member of the public can obtain from his various departments.

Whatever the general opinion of the profession as to this extension of State interference with the health of private individuals, I know that our Medical Secretary, Dr. Cox, at a meeting of the local Branch of the British Medical Association at Boston last autumn, warned us against further encroachments on the work of the general practitioner.

Whether the doctors themselves take any steps to protect their interests or not will not much matter, as economic pressure is slowly but surely going to produce a marked retrenchment in public expenditure.—I am, etc.,

Long Sutton, Wisbech, April 12th. R. MURRAY BARROW.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders W. W. D. Chilcott to the *Victory* for the *Nelson* for trials; S. Bradbury lent to New Zealand Division; L. F. Strugnell to the *Adventure* on commissioning; J. F. Pace to the *Victory* for R.N. Barracks; H. W. Nicholls to the *Ganges*, temporary, supernumerary, and to the *St. Vincent*; H. C. Deves to the *Pembroke* for R.N. Hospital, Great Yarmouth.

SPECIAL NOTICE TO MEMBERS.

Every Member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he or she belongs.

British Medical Association.

PROCEEDINGS OF COUNCIL.

Tuesday and Wednesday, April 5th and 6th, 1927.

A meeting of the Council was held on April 5th and 6th at the House of the Association, Tavistock Square. The meeting began at 2 p.m. on the first day, the members having attended the Lister Celebration in the morning,[1] and continued throughout the whole of the second day. Sir Robert Bolam, Chairman of Council, presided, and there were present:

Mr. R. G. Hogarth (President), Dr. H. B. Brackenbury (Chairman of Representative Body), Mr. N. Bishop Harman (Treasurer), Dr. F. G. Thomson (Past President), Dr. C. O. Hawthorne (Deputy Chairman of Barcroft Anderson, Surgeon Rear-Dr. H. S. Beadles, Sir Alfred Blenkinsop, Dr. J. W. Bone, Dr. H. C. Bristowe, Dr. H. G. Dain, Dr. J. S. Darling, Dr. C. E. Douglas, Mr. T. P. Dunhill, Mr. W. McAdam Eccles, Dr. D. E. Finlay, Dr. E. R. Fothergill, Dr. F. J. Gomez, Dr. D. G. Greenfield, Dr. R. Wallace Henry, Dr. G. B. Hillman, Dr. J. Hudson, Dr. I. W. Johnson, Dr. R. Langdon-Down, Dr. E. K. Le Fleming, Dr. R. W. Leslie, Dr. E. Lewys-Lloyd, Sir Richard Luce, M.P., Dr. A. Lyndon, Dr. R. A. Lyster, Dr. J. A. Macdonald, Dr. S. Morton Mackenzie, Dr. A. Manknell, Dr. O. Marriott, Dr. J. C. Matthews, Dr. G. W. Miller, Dr. Hugh Miller, Dr. John Mills, Dr. Christine Murrell, Mr. A. W. Nuthall, Lieut.-Colonel F. O'Kinealy, Dr. W. Paterson, Dr. J. Dodds Price, Dr. R. Radcliffe, Mr. H. S. Souttar, Dr. Lockhart Stephens, Dr. John Stevens, Dr. W. E. Thomas, Dr. G. Clark Trotter, Mr. E. B. Turner, Sir Jenner Verrall, and Dr. J. F. Walker.

Apologies for absence in respect of the meeting on Tuesday, April 5th, were received from the Past President, the President-Elect, Dr. G. A. Allan, Dr. G. F. Buchan, Mr. T. P. Dunhill, Dr. I. W. Johnson, Dr. David Lawson, Dr. J. G. McCutcheon, Mr. A. W. Nuthall, Group Captain N. J. Roche, Dr. W. E. Thomas, Mr. E. B. Turner, Dr. D. Walshe, and Sir William de Courcy Wheeler; and in respect of the meeting on Wednesday, April 6th, from the President, the President-Elect, Dr. G. A. Allan, Dr. G. F. Buchan, Dr. David Lawson, Dr. J. G. McCutcheon, Dr. W. Paterson, Group Captain N. J. Roche, Dr. D. Walshe, and Sir William de Courcy Wheeler.

Preliminary Business.

The Chairman announced the death of Dr. Charles H. W. Parkinson, formerly member of Council, president of the Dorset and West Hants Branch, and chairman of the Bournemouth Division. The Chairman was authorized by the Council to send a letter of condolence to the family.

The Chairman reported that Dr. Clark Trotter was the only candidate nominated to represent the New Zealand and Fiji Branches on the Council for the unexpired portion of the late Dr. David Ewart's term of office—namely, to the end of the 1927-28 session—and he was accordingly elected; also that the following, in the absence of other nominations, had been elected members of the Council to represent groups of Branches outside the United Kingdom where there were vacancies: Mr. T. P. Dunhill (New South Wales and Queensland), Sir Jenner Verrall (South Australian, Tasmanian, Victorian, and Western Australian), Dr. F. J. Gomez (West Indian group), Dr. O. Marriott (Hong-Kong and China and Malaya), and Lieut.-Colonel Ashton Street, I.M.S.(ret.) (Indian group).

Dr. William Paterson was nominated for election to the Council of the Society of Medical Officers of Health for the remainder of the present session, in the place of the late Dr. Ridley Bailey. The nomination of Dr. H. B. Brackenbury to represent the Association on the Departmental Committee to consider the draft bill for the registration of optical practitioners was confirmed.

A report was received from Dr. H. Cooper Pattin, the official delegate of the Association to the Australasian Medical Congress, held in Dunedin in February, and already very fully reported in the Journal. The President of the Congress (Dr. Barnett) also sent a communication thanking the President of the Association and the Council for their cable message, which "was received with hearty acclamation at the inaugural function, and brought home to all of us the fact that the parent body maintains a very real interest in the welfare of the younger Branches in distant lands."

On the Chairman's motion, Sir G. Lenthal Cheatle, Dr. A. L. Flemming, Dr. J. Strickland Goodall, and Dr. S. Gilbert Scott

were appointed official delegates of the Association to the annual meeting of the Canadian Medical Association in 1927. Dr. H. M. Cohen of Manchester, who expected to be in the United States at the time of the annual session at Washington of the American Medical Association, was appointed to act as delegate on that occasion, and the Chairman was empowered to add a second name.

The Chairman reported that he had requested Dr. G. A. Allan to attend the official religious service at Glasgow in connexion with the Lister Celebration as representative of the Association, and Dr. Allan had attended and deposited a wreath.

The University of Toronto invited the Association to send a delegate to take part in the celebration of the centenary of the granting of the University charter, which was to take place in October. It was agreed to defer this matter until the Annual Meeting.

In response to the invitation of the Dean and Faculty of University College, London, asking the Association to send a delegate to the centenary celebrations, the Council decided that the Editor, Sir Dawson Williams, a Fellow of University College, should be asked to attend.

Dr. Fothergill was appointed to represent the Association at the National Conference on Maternity and Infant Welfare in July; and Dr. Dain, Dr. C. E. S. Flemming, and Mr. Bishop Harman were asked to serve as representatives to the third Imperial Social Hygiene Congress.

On the motion of the Chairman, Mr. W. E. Hempson was reappointed Solicitor of the Association for one year from April 1st.

The officers of the Association were constituted a sub-committee to consider preliminary arrangements in connexion with the preparations for the Annual Meeting in Canada in 1930.

The Medical Secretary read the cablegram from Shanghai which was reproduced in the JOURNAL of April 9th (p. 680), and the Council resolved that steps be taken to get into communication with the senders of the cablegram and assure the profession in Shanghai of its cordial sympathy and of whatever support the Association was able to give. It was also decided that copies of the cablegram should be sent to the members of the Medical Committee in Parliament.

Association Finance.

The Treasurer (Mr. Bishop Harman) reviewed the financial position of the Association in the light of the figures for 1926. The surplus originally estimated for the year was £4,200, but the actual total surplus realized was £8,873. Against this had to be set certain expenditure. It was necessary to provide a sinking fund for the redemption of the amount spent on leasehold premises. The Finance Committee recommended that a sum of £1,000 should be set aside annually for this purpose. For the first time in the history of the JOURNAL there had been a lapse in its sequence of issues. That was due to the general strike. Otherwise the year had been a "bumper" one for the JOURNAL. A striking feature of the year's working was the way in which the advertisement revenue had been maintained. The scrupulous care exercised by the Journal Committee and the staff over the character of the advertisements appearing in the JOURNAL exemplified the truth that honesty was the best policy, for the columns of the JOURNAL, as a result of this scrutiny, became more valuable for honest traders, who in consequence supported it more extensively. Altogether, it was a matter for congratulation that at the end of a year which had been in many ways exceptionally difficult the financial position should be so satisfactory. In reply to Dr. Macdonald, who wanted to know the explanation for the error in budgeting whereby the proved surplus turned out to be twice as great as the estimated surplus, Mr. Bishop Harman said that the budgeting was on the basis of the membership, and it had not been possible to budget for the increase of membership which had in fact taken place during the year.

On the recommendation that a sinking fund be commenced for the redemption of the amount spent on leasehold premises, the Treasurer said that the idea of the Finance Committee was to invest this money annually in a policy, which would be less likely to be used for other purposes than if the money were accumulated in the Association's own hands. Dr. Lyndon thought that the Finance Committee had not taken any final decision on the matter of taking out a policy, but had resolved to consider this expedient further. Dr. Beadles thought that the Association was quite large enough to be its own insurer, and that it was unnecessary for it to take out a policy. The Treasurer pointed out that the recommendation before the Council was only that a sinking fund should be commenced by the setting apart of a sum of £1,000, and that the course to be pursued would be a matter for further consideration by the Finance Committee, which would bring up a recommendation later on. The recommendation was agreed to, as were also certain other formal recommendations of the committee and of the Office Staff Superannuation Committee.

Early Mental Disease and General Practitioner Treatment.

Mr. Souttar brought forward two recommendations from the Hospitals Committee, both of them for reference to the Representative Body. One of them dealt with the recognition of services of the medical staffs of voluntary hospitals, and the other with the treatment by practitioners working on a part-time basis of patients suffering from early mental disease at hospitals or clinics. Both recommendations are set out in the Annual Report of Council (SUPPLEMENT, April 23rd, p. 155). With regard to the second of these Mr. Souttar pointed out that clinics for the treatment of patients suffering from the early stages of mental disease were being attached to hospitals and placed in charge of the medical superintendents of county asylums. His committee was of opinion that such a position was not in the best interest of the patients, and that such work should be in the hands of practitioners serving on a part-time basis who had special knowledge of the subject. If care were not taken in connexion with this matter the general practitioner might be pushed out of a province in which he could perhaps do better work than a whole-time officer. In border-line cases the general practitioner was very often the most competent person to deal with the situation.

Dr. Walker was not happy about the recommendation. A patient suffering from mental disease in its early stages seemed to him to require very expert handling. He quite agreed that a general practitioner of any standing was perhaps as well able to recognize early mental abnormalities as anybody else, but was he in a position to give the requisite time to the treatment of early mental cases? Dr. Brackenbury said that the committee's reason for bringing forward this recommendation was, not that it considered medical superintendents of mental hospitals to be less advantageously placed for dealing with such cases than other medical men, but that the whole-time officer employed by the local authority and the hospital superintendent ought not, on the general principles which had been enunciated by the Association from time to time, to be allowed to take the extra appointments, which might very well be left to the part-time service of private practitioners if they were properly qualified to carry out the work required.

Dr. Fothergill said that the superintendents of mental hospitals and their colleagues never saw the beginnings of mental disease, and therefore were not so versed in the disease in its early stages. Those who did see the beginnings were general practitioners—not necessarily general practitioners as a class, but those among general practitioners who had made a speciality of the work and had given most of their time to it.

Dr. Douglas supported Dr. Brackenbury's contention. They did not want such cases to be placed in charge of medical superintendents of county hospitals. In the Edinburgh Royal Infirmary there was a ward for incipient cases which was attended by one of the physicians of the hospital, and the experiment had been very successful. He was aware, however, that it was one which did not commend itself to medical superintendents of mental hospitals, and one such superintendent had said that he and other medical officers similarly placed did not think that to take such cases into general hospitals was at all the right thing. That opinion, however, was certainly contrary to the trend of public feeling at the present time. He thought that the Association ought to use all its influence in the direction of seeing that this work was not done by physicians to mental hospitals. Whether the work could be done by men in general practice was another matter, but personally he felt that such men, by reason of the width of their experience, knew a great deal more about the early manifestations of mental disorder than men who were working in mental hospitals.

Dr. Christine Murrell thought that if medical officers of mental hospitals were in charge of such clinics a wrong atmosphere would be created, and the patients of whom it was desired to get hold would not come. It was not at all advisable

that these clinics should be too much and too clearly associated with mental treatment and hospitalization. What was wanted was that the patients should feel only that they were nervously deranged.

Dr. Lyndon wanted some qualifying words to be inserted after the reference in the recommendation to medical practitioners as those who should carry out the treatment of these patients—such words as "medical practitioners who have special knowledge of the subject." Dr. Bristowe supported this suggestion. He considered it really necessary to have men who had some special knowledge of the subject to deal with early mental cases, and not those who had only the experience of the ordinary general practitioner. Dr. Mills said that his experience of the treatment of mental cases was that the general practitioner treated them wrongly. The proposal of the Hospitals Committee should not be passed in any shape or form, in his opinion. Dr. Dain suggested that if there was no urgency about this matter the recommendation might be taken back for rewording.

Dr. Lyndon moved an amendment of the latter part of the recommendation, which was seconded by Dr. Dain, and carried, and the Council then gave its approval to the amended recommendation, which read as follows:

> That it be recommended to the Representative Body that specialist work in connexion with the treatment of patients suffering from mental disease in its early stages, whether at hospitals or clinics, should not be carried out by whole-time medical officers of public health or local government authorities, but on a part-time basis by medical practitioners who have special knowledge of the subject, but who need not necessarily be devoting their whole time to such work.

The Hospital Saving Association Scheme.

In dealing with other matters in the report of the Hospitals Committee, Mr. Souttar said that the committee had had a good deal of correspondence with the Hospital Saving Association on one important point of hospital policy. It had been suggested by the Council that the Hospital Saving Association should adopt as an integral part of its policy a provision that its contributors when attending hospital should take with them a letter of recommendation from their private practitioner. The Hospital Saving Association recognized the importance of this, but said that it could not penalize its members by insisting upon such a letter when other patients entered without it. It brought itself within the four corners of the policy, however, by issuing a notice to its members pointing out the importance of taking a letter with them. The Hospital Saving Association had also raised another matter. It had made arrangements with opticians for the supply of glasses without any reference to the medical profession at all, but afterwards it had agreed to withdraw these arrangements, and a panel of medical practitioners who were willing to examine the eyes and prescribe spectacles, if necessary, for contributors to the scheme was being drawn up. He thought that the committee had scored a point with regard to this.

Dr. Hawthorne asked whether the Council might take it from Mr. Souttar's statement that the conditions regarding this optical arrangement were now satisfactory. This was not quite clear from the report of the committee, which stated, "Subject to it (the committee) being satisfied that the Hospital Saving Association will no longer recognize any arrangement with opticians for the examination of the eyes of its contributors, the committee has agreed," etc. He gathered that no positive assurance had been given on the point. A great deal had been heard about the attitude of the Hospital Saving Association, but its action seemed to be continually in conflict with what it professed. It professed great regard for the principle that the patient who went to hospital should go with a note of introduction from a practitioner, but it did not secure that that end was attained. As to the proposition that out-patient departments should be used as consultative centres, there again there had been a warm expression of appreciation on the part of the Hospital Saving Association, but no active measures had been taken to secure that the principle was carried out in practice.

Mr. Souttar said that there had been several discussions between the committee and the Hospital Saving Association with regard to patients' letters, and the Association had said that it would be quite willing to insist on a letter, but that practitioners refused to supply them. The people who had to be educated in this matter were practitioners. When the staffs of hospitals had been educated up to refuse to receive patients unless they brought letters with them, and when the practitioners who treated the patients had been educated as to the necessity of sending a letter with a patient, it would be time to quarrel with the Hospital Saving Association. In this connexion he called attention to an appendix on "Contributory schemes for hospital benefit," drawn up in a masterly way by the Deputy Medical Secretary, which it was proposed to bring before the Representative Body as a matter of propaganda.

Mr. Bishop Harman drew attention to a paragraph in the committee's report which stated that the attitude of the Hospital Saving Association on the matter of contributory schemes for hospital benefit was such as to justify the Council in withdrawing any opposition to the scheme of that association. He desired to see this paragraph deleted, and moved accordingly, and this was seconded by Dr. Hawthorne.

Mr. Souttar opposed the motion. The Hospital Saving Association was being asked to do something which the hospitals themselves did not do, and which many medical men refused to take the trouble to do. Why should the Hospital Saving Association penalize itself by insisting on its members having letters while other people were allowed to walk in without any letters at all?

Mr. McAdam Eccles also opposed the motion to delete the paragraph. He knew something about the Hospital Saving Association from the inside, and he could assure the Council that it was in absolute accord with the view that the patient should have a letter from his practitioner, but the difficulties in carrying this out at the present time were almost insuperable. In some of the large hospitals only one-sixth of the patients brought a letter. In hospitals which had medical schools, if the condition were insisted upon at the present time, the result would be a serious loss of clinical material for teaching purposes.

Mr. Bishop Harman maintained that the paragraph to which he objected was directly in conflict with the hospital policy of the Association. The Chairman considered it a debatable paragraph, and one which undoubtedly weakened the policy. Dr. Brackenbury said that he would be extremely opposed to the Association retiring from its policy in the slightest degree, and if the paragraph implied any such retirement he hoped it would be deleted. If the paragraph were taken out and things remained as they were, the Association would be bound in accordance with its hospital policy to carry out an active opposition to the Hospital Saving Association scheme. The Hospital Saving Association was adopting an attitude towards the policy of the British Medical Association which was perfectly correct, but was taking no action itself thereon, because it declared that it was not the body which could properly take action. He suggested a rewording of the paragraph, that it should simply read: "The committee is of opinion that this attitude of the Hospital Saving Association would justify the Council in withdrawing any active opposition at present to the contributory scheme of that association." The term "at present" meant that the provision would remain in force until the Council determined otherwise.

Mr. Souttar objected to the words "active" and "at present." They took away the point of the committee's paragraph, which was that the Hospital Saving Association had met the committee as far as it was possible to do so.

Dr. Brackenbury's amendment, which was seconded by Dr. Radcliffe, was carried, and a proposal by Mr. Souttar to leave out the words to which he had just objected was negatived.

Mr. Souttar, in reply to Dr. Hawthorne's earlier question about the arrangement with opticians being withdrawn, said that the committee had the assurance of the Hospital Saving Association that the action would be taken, and he was informed by Dr. Anderson that that association would not be supplied, as requested, with the list of ophthalmic surgeons in the area covered by its scheme until it had done so.

Groups in the Association.

Dr. Morton Mackenzie, chairman of the Organization Committee, brought forward a scheme for the formation of groups in the Association, based on a memorandum submitted by the Medical Secretary to the Council at its previous meeting. The idea was that groups should be composed of members of the Association who had common interests sufficiently distinct from

those of the general body of members, and who, by reason of their smallness in numbers or the nature of their distribution, or both, were not able to meet to discuss those interests or to express their opinion in regard to them adequately through the Branch and Divisional machinery. It was proposed that if not fewer than thirty-five members specially concerned petitioned the Council to the effect that they wished a group to be formed, the request should be considered by the Council, whose decision, subject to appeal to the Representative Body, should be final. Dr. Mackenzie said that if some such arrangement as this were not made there was always a danger that sectional societies altogether outside the organization of the Association might be formed. He believed that the majority of the groups which might possibly be formed would be of a scientific character, and the hope would be to associate them as far as possible with the appropriate Section at the Annual Meeting.

Dr. Fothergill, who was of opinion that this question should go before the Representative Meeting, mentioned some of the groups which might possibly be formed—ship doctors, medical officers of seaports, prison surgeons, spa practitioners, medical radiologists, medical officers of schools, psychologists, and others. He thought that the procedure of petitioning to have a group formed should be left quite fluid. One suggestion, that the annual meeting of the group should be held at the time and place of the Annual Meeting of the Association, he thought unwise. Why should not the members of the group have their annual meetings to suit themselves? He would have much the same procedure adopted as in the case of Divisions. He also urged the great need for care in dealing with what was an altogether new departure for the Association, which had hitherto been run entirely on territorial lines. He was very jealous of the Division grouping, and he thought that as far as possible members with special interests should be encouraged to voice their opinions through the Divisions.

Some criticism was made as to the number—thirty-five—of petitioners which was laid down as necessary before the formation of a group could be considered. Dr. Mackenzie did not think it worth while forming a group unless thirty-five people at least were found willing to support it; but Mr. Bishop Harman, who hoped the Council would approve the principle of group formation, deprecated the number being fixed at thirty-five. He preferred the same procedure, by advertisement in the JOURNAL, which was followed in the case of the formation of Divisions.

Dr. Brackenbury hoped that the Council would adopt, not merely the principle, but the scheme itself. At this time of day he thought they would all be in favour of the principle, but there might be some hesitation on details. He was glad that the Medical Secretary had been able to formulate a scheme which appeared so satisfactory. One had had it vaguely in mind that this thing would be very difficult. The whole object was, not to encourage the formation of groups, but to provide that when the necessity arose the machinery would be available. This would avoid the formation of bodies outside the Association, for such bodies, however they might begin, tended to drift more and more into the position of independent units. He thought the dangers of the scheme were very small, though in making a radical move of this kind it was necessary to be aware of such dangers as existed.

Dr. Bone was also in favour of the scheme, but asked what was meant by the phrase "common interests" as pertaining to the members of a possible group. Might there be groups of members whose common interests were financial or political? He thought also that by the subcommittee system the Association had already made provision for many members of this class.

Dr. Hawthorne said that one of the commanding phrases in the scheme was that the question of the formation of any group must be "considered by the Council." This clearly implied that the Council would not sanction a group unless it was considered necessary. The object was, not to encourage members having particular interests to form groups, but only to provide for the construction of a group when the need was not met in any other way. But the laying down of an arbitrary number like thirty-five seemed to tie the hands of the Council, and while in favour of the scheme he was against that part of the proposal.

The Chairman thought that the financial implications should be considered. The Council should pause before saying that any number below thirty-five needed special expression in a society of 35,000 members. Further, was it to be considered that ophthalmologists, for instance, had interests so distinct from those of other members of the Association that they would be entitled to form a special group? He was a little unhappy about the scheme. He could not see that it was right to give machinery such as this into the hands of very minute groups of members; and in the case of large groups, like the ophthalmologists, he could not see that their needs were so different from those of the general body of members in the Association as to warrant the formation of a group.

The Medical Secretary said that the intention was to provide for quite small groups. He never had in his mind a scheme which would attract any large number of members, for whom the machinery of the Divisions was at present available. But, take such a group as the prison surgeons—there were only about twenty-five of them working as whole-time officers. There was a further number of part-time officers, but their interests were different from those of the whole-time men. If he had been asked a year ago whether there was any hurry in this matter he would have said that there was not, but during the last twelve months the pathologists had got together and started a new body, which gave them an excellent excuse for not joining the Association. In reply to a question with regard to colliery practitioners, the Medical Secretary pointed out that such practitioners had a large voice in many Divisions in the country, and that the scheme now proposed was not for them, seeing that they were not a small group nor sparsely distributed.

With regard to the number of members required to petition the Council if a group was to be formed, it was agreed that it should be left to the Council, in the event of any request, to consider whether the number was satisfactory. The Medical Secretary also emphasized that one of the points in the scheme was that the group meeting or the group committee should, whenever possible, use the ordinary machinery of the Association, its Divisions and Branches, Standing Committees, and Council, for the discussion of subjects in which it was interested and for making any proposals to the Representative Body.

It was then agreed to recommend to the Representative Body the approval of the scheme.

Other Organization Matters.

Dr. Morton Mackenzie said that the Brighton Division had asked the Council to consider and report to what extent and under what conditions financial and other assistance could be given to Branches and Divisions which might desire to invite societies formed for the promotion of medical and allied sciences to hold conferences within their areas. As in everything which came from the Brighton Division, there was an excellent idea at the bottom of this proposal, but his committee thought that each suggestion of this kind should be treated on its merits. A long appendix contained the comments of the committee on the Brighton proposal.

Dr. Fothergill was delighted that the Organization Committee had accepted the principle of the proposal.

Pathologists and Public Health Authorities.

Dr. Hawthorne (Chairman of the Pathological Committee) said that as a result of representations made by the British Pathologists' Association, a body recently formed, the Council had been asked to modify certain of the recommendations which it adopted at its December meeting for submission to the Representative Body. Some of the proposals of this new body—not all of them—commanded the support of his committee, which therefore asked the Council to make the modifications. The Council had proposed that public health authorities should not furnish pathological reports except in three cases—namely, those which directly involved questions of public health, those in which the patient could not pay a fee, and those in which provision was made for such reports by statutory right. It was now requested that there should be incorporated in the recommendation that public health authorities "should neither provide for pathological examinations nor furnish pathological reports on individual cases" except in the three instances mentioned; in other words, that the door should be locked a little more effectively than was proposed in the original recommendation. It was also proposed to modify the second of the exceptions above, in order to afford some kind of guarantee that the person who claimed to receive a report without pay-

ment should be one who was really unable to pay a fee. The suggestion was that in each case there should be a guarantee from the practitioner in attendance that such was the economic state of the patient. He therefore proposed that the exception should read, "when the patient, as certified by the practitioner in attendance, is unable to pay a fee."

Dr. Fothergill suggested the alternative words "when the patient is introduced by the practitioner in attendance"—who would not introduce anybody able, to his knowledge, to pay a fee—but Mr. Bishop Harman hoped the Council would not accept this suggestion, as there was very little hardship, if any, involved in saying, "This patient of mine is a proper person to receive a report without payment." Dr. Manknell pointed out that in general practice nothing was more difficult than to judge of the ability of a patient to pay. Dr. Douglas said that this was a public health service, and the public health authorities had it in their power to charge an individual if he was in a position to pay. That was probably the correct angle, on the analogy of the Midwives Act, from which to view the matter. Dr. Brackenbury thought that the modification now suggested by the committee, that the method of determining that the patient was unable to pay a fee should be a little more specific, was quite reasonable. Dr. Fothergill still considered that the inquiry into the question whether the patient was able to pay a fee should be carried out by the local authority. Doctors should not be expected to make inquisitorial inquiries into the incomes of patients. Dr. Hawthorne, in reply to this, asked whether it was reasonable to suggest that when a doctor and patient were awaiting anxiously a pathological report the machinery of the local authority should be set in motion to conduct an inquiry into the economic condition of the patient. In the great majority of cases the position would be met if the doctor said, "In my judgement this is a patient for whom a report ought to be provided without payment of a fee." Doctors could surely trust their professional brethren to act fairly towards one another and towards the local authority. He was bound to press the principle upon the Council because his committee had heard the representatives of the Pathologists' Association, and had been convinced that something ought to be done to secure a guarantee. For practical purposes no one was able to produce that guarantee except the practitioner in attendance. He agreed, however, to substitute the word "stated" for "certified."

After further discussion, Dr. Radcliffe proposed as an amendment to lay down the requirement that the medical officer of health should be satisfied, "either by the general practitioner in attendance or otherwise," that the patient was unable to pay, and this was seconded by Dr. Hugh Miller, but was negatived.

Dr. Lyster indicated certain administrative difficulties. The suggestion underlying the recommendation was that practitioners should send specimens to the public health authority's laboratory when they could certify that the patient was unable to pay a fee. This implied a division by the practitioner of his specimens into two classes, the poor patients' specimens being sent to one laboratory, and others, presumably, to another laboratory, which would lead to difficulties of an obvious kind. But in many districts there would be no choice of laboratory. In his own area practitioners were sending specimens to his laboratory, and were indicating whether the patient could or could not pay. They were finding the service of great value to them—at all events, they were taking advantage of it to a constantly increasing extent. Was it likely that public health authorities would turn away specimens from patients who were able to pay, and could the Association criticize a local authority so long as it was paying its pathologists and laboratory workers a satisfactory sum?

After further discussion it was agreed that the recommendation to the Representative Body should read:

> "That public health authorities should neither provide for pathological examinations nor furnish pathological reports on individual cases except (1) in cases which directly involve questions of public health, or (2) where provision is made for such reports by statutory right, or (3) when the patient is stated by the practitioner to be, in his opinion, a person unable to pay a fee."

The Pathologist's Fees for Private Work.

Dr. Hawthorne moved a further recommendation modifying a resolution already passed. The resolution was that where a pathologist attached to a hospital or medical school undertaking pathological work as a general service did such work for persons able to pay fees, the fees should be the property of the pathologist, subject to such charge for the use of the laboratory as might be arranged. His committee now considered that the fees paid in the circumstances contemplated should be a matter of private arrangement between the pathologist and the persons for whom the examinations were made. It had been pointed out to his committee that hospital authorities might insist upon fees being fixed at a rate that would involve unfair competition with other laboratories outside. The revised recommendation followed the one already approved by the Council with regard to private patients in hospitals. The pathologists wished to make the position in their case the same as that of the attending practitioner, and to provide that it was for them to fix the fees, and not for the authorities to fix them.

The Chairman said that he was aware of several instances in which an attempt had been made to establish a system similar to that now suggested, and after a time it had been found to be unworkable. The pathologist, a whole-time man, got his introduction to various private work by virtue of his occupation as an officer, and the employing body had felt compelled, in the long run, in many cases, to insist on the disclosure of all such transactions, and that proper accounts be kept. The system was productive of friction between the person employed and his employers.

Dr. Brackenbury, in reply to a criticism by Dr. Radcliffe, that the Pathological Committee had heard only one side of the case, that of the pathologists, pointed out that on the committee there were two representatives of the Hospitals Committee, and it was not correct to say that one side only had been heard. The point was that under the original recommendation it was competent for the hospitals or laboratories concerned to say to the pathologists, "We agree that you may do private work, but we are going to prescribe the fees which you shall charge for that work," whereas the pathologists claimed to be at liberty to make their own schedule of fees and not to have to adopt the hospital schedule. The committee believed the contention of the pathologists to be a just one, and entirely consistent with the hospitals policy.

Dr. Thomas said that he could not conceive any public body engaging any person on the terms suggested; they were absolutely impracticable. Mr. Harman, however, said that the arrangement proposed was common practice in London, and worked admirably, without any suggestion of overcharging or undercharging, or anything else. The pathologists, however, must be protected in such a case as had occurred in London, where an institute was started with a scale of fees which undercut everything, even the public laboratories.

Dr. Hawthorne defended his committee, which, he said, had spent a great deal of time over this matter, and, as a matter of fact, had not endorsed all the proposals received from the Pathologists' Association, a body which came into existence long after the main deliberations of the committee were concluded.

The recommendation, which read:

> That where a pathologist attached to a hospital or medical school undertaking pathological work as a general service does such work for persons able to pay fees, the fees paid for such examinations (subject to such charge for the use of the laboratory as may be arranged) should be the property of the pathologist, and should be a matter of private arrangement between the pathologist and the person for whom the examinations are made—

was then put to the Council and adopted.

Orthopaedic Hospitals and Clinics.

Dr. Bone (Chairman of the Medico-Political Committee), in bringing forward a memorandum with regard to orthopaedic hospitals and clinics (SUPPLEMENT, April 23rd, p. 160), which he moved for approval and presentation to the Representative Body, recalled that the Representative Body gave the Council specific instructions to consider and report upon the present position and probable future development of organized schemes for the treatment of physically crippled children and of children suffering from actual or potential rheumatism and/or heart disease.

The memorandum and the contingent recommendations to the Representative Body, which are set out in the Annual

Report of Council, were approved. In the course of some brief discussion, Dr. Lewys-Lloyd asked what was meant by "free access" in one of the recommendations—"the private practitioner should have free access to the work at hospitals and clinics for the purposes of observation and training." Difficulty often arose about doctors in the same town. He himself had taken the definite stand of turning out everybody except the child's doctor, and he was quite prepared to do so again.

Dr. Brackenbury said that it was one of the principles already laid down by the Association that, speaking generally (of course, one could conceive of wanton abuse of privileges, but one did not assume such abuse), clinics and treatment centres established out of public funds should be available for medical observation and for the increase of medical experience. The recommendation simply applied that principle to orthopaedic centres. It was true that the privileges had to be used under certain regulations and with common sense, and those in administrative charge of the clinics could not yield to clamour on the part of a mob of practitioners intruding themselves in a consulting-room, which was what was logically implied by "free access."

Medical Officers of Public Schools.

Dr. Bone, in bringing forward a memorandum on the responsibilities and difficulties of medical officers of public schools, and a series of recommendations relating to whole-time and part-time medical officers, recalled the long discussion which took place in the Council at the December meeting (SUPPLEMENT, January 1st, 1927), when this question was first submitted, and said that many valuable suggestions had been made on that occasion, of which the committee in revising the report and recommendations had taken note.

Dr. Le Fleming thought that the matter might be approached from a wider point of view than that of a scale of salaries and a schedule of duties. Every medical man connected with public school work must be aware of the little attention which parents paid to the physical side of education. The parent was willing to spend from £50 to £100 a term for the mental education of his child, receiving twice a term generally a detailed report of the development of his child's mind, but only some ten shillings a term for possible attention to the physical side, because it seemed to be assumed that the physical development would proceed normally and without trouble, perhaps even without oversight. Therefore, he urged that, in the preamble to what the Council proposed to make the British Medical Association say upon this subject, the opinion of the profession should be very definitely stated that it was desirable that every pupil should be examined periodically, and that a report on his physical development should be furnished.

Dr. Bone said that his committee had not lost sight of the very important matter of periodical physical examination, and it was provided for in one of the recommendations. Dr. Le Fleming, however, contended that attention ought to be drawn to this matter singly and directly, instead of placing it, as in the recommendation, as a thing only equal in importance to some fifteen or twenty other duties. Referring to another paragraph of the report, which stated that the duties of the school medical officer included the care of those who were actually sick—namely, pupils or masters—he asked whether it was customary for attendance on the masters to be so included. Dr. Bone said that the committee had been informed that attendance on the masters, as distinct from the masters' families, was part of the duty for which remuneration was paid. The statement referred to the general usage, and a few exceptions did not invalidate it. Dr. Bone having further stated, in reply to Mr. McAdam Eccles, that the committee had not had any direct conference with the headmasters, Dr. Brackenbury said that more than one person on the committee was an experienced governor of a large public school, and such members, being unable to separate themselves into different parts, had brought their experience as governors to bear upon this problem.

Approval was then given to the preamble which appears in the Annual Report of Council (SUPPLEMENT, April 23rd, p. 149), the only alteration being that, to meet Dr. Le Fleming's point, the word "usually" was inserted before "masters" in the phrase "Care of those actually sick—pupils and masters," and a paragraph inserted expressing the desirability of periodical examination and report.

The Council then discussed the principal recommendation, which dealt with the appointment, qualification, salary, and duties of the whole-time medical officer. Discussion arose on the list of duties set out.

Dr. Fothergill here raised a point he had already raised in committee—namely, the question of periodical examination of boarders—which was set out as one of the duties. No reference whatever was made to day-boys, and his view was that every boy, even though a day-boy, should come under the supervision periodically of the medical officer. Why should day-boys be exempted? Dr. Le Fleming said that periodical supervision would undoubtedly be of benefit to the boy, but the practical objections were insuperable. The position of the medical officer would be made very difficult in these circumstances in relation to the other doctors in the town.

On the question of the duties which should not be demanded of a whole-time medical officer as being covered by his salary, Dr. Lyndon noted *x*-ray examinations, and asked whether it was not the fact that in many large schools at the present time the resident medical officers took *x*-ray pictures of injuries to bones and joints as part of their ordinary work, and did not charge fees for doing so. Dr. Bone replied that there were certain schools in which this was done, but the paragraph did not say that the medical officer was not to do it; what the paragraph said was that this was not part of his duty. There, again, the question was one of balance. Some men did such things in their schools without any special fee; in other schools it was a matter of special arrangement.

All the recommendations of the committee up to this point were adopted.

The principal discussion then took place on a recommendation that all public schools with 400 or more resident pupils should be provided with a whole-time medical officer.

Dr. Lyndon considered this to be doubtful wisdom. There were quite a number of public schools with more than 400 boys without a resident medical officer, local practitioners attending the different houses where the boys lived, and the system had worked well. Dr. Douglas took the same view, and urged also that it was very much better that this work should be in the hands of a man in general practice than in those of a whole-time medical officer. At Eton, he believed, the work was done by two part-time medical officers who were also engaged in practice in the neighbourhood. Mr. Bishop Harman supported the proposal of the committee, which he thought represented an advance. His experience had been that the treatment by part-time medical men at public schools was very good when the scholars were seriously ill, but very indifferent when they were not seriously ill. The beginnings of disease, which might be serious in the end, were not observed by the busy practitioner, who naturally could not be in the school whenever there was anything happening. Surely 400 children was a sufficient number to justify one medical man on the premises all the time. Mr. McAdam Eccles thought that it was necessary to exercise great care over this recommendation. It represented an ideal, but he questioned whether the time was ripe. Perhaps in the near future it might be possible to approve such a recommendation, but some governing bodies had not yet realized the advantage of a whole-time medical officer. Dr. Langdon-Down said that he had had children in schools under both systems, and in his experience matters were more satisfactory when the local practitioner came in. Observation was kept by the matron, and there was some fear that her feeling of responsibility would slacken if she knew that there was a doctor always, like herself, in the place. Dr. Bone hoped that the recommendation would go forward. If it did not, it simply meant that the Council did not believe in the whole-time medical officer. He pointed out also that under the recommendation no part-time officer would be displaced; only as vacancies occurred would posts be filled in the manner indicated.

The recommendation of the committee was negatived by 26 votes to 14.

Dr. Bone next came to a series of recommendations dealing with the part-time medical officer.

Dr. Brackenbury raised the question of the inclusion, among the part-time officer's duties, of the periodical examination of pupils. The Council had decided that it was not desirable in the case of a whole-time officer that he should make a periodical examination of any pupils except those who were

resident. Was it or was it not desirable that the man chosen for appointment as part-time officer should have as his duty the periodical examination of all the boys attending the school irrespective of whether that in their homes they were the patients of other local doctors?

Dr. Le Fleming hoped the Council would not agree to the inclusion of this duty. It was extremely important that there should be periodical examination of all pupils, whether by the term or by the year, but obviously, to examine properly hundreds of boys and furnish a proper report on their condition, must take up a great deal of time. To include this as part of the day's work would be wholly unreasonable. The periodical examination of day-boys, he thought, should be done by special arrangement, and not of necessity made part of the duty of the medical officer. If this work were included in a part-time officer's duties it might be done very perfunctorily or not at all.

Dr. Christine Murrell, as a part-time school medical officer, had no hesitation in saying that periodical examination, which was very largely preventive work, could be quite satisfactorily carried out both in regard to resident and day pupils by such an officer, without any difficulty at all being raised by the local doctors. These doctors welcomed such examinations, and it was all to their advantage to be told of any slight defect in their patients.

Eventually Dr. Le Fleming suggested a rearrangement of the order of duties given in the paragraphs, whereby the usual duties of a part-time medical officer of a public school were set out in one category, and other duties which might be included—these embracing periodical examination of pupils—were set out in another category. When the duties in this second category were required of the part-time officer, it was recommended that he should be paid a retaining fee. This rearrangement was accepted by Dr. Bone on behalf of his committee, and was approved by the Council. It appears in the Annual Report of Council, SUPPLEMENT, April 23rd, p. 150.

Nursing Homes Registration Bill.

Dr. Bone, in dealing with other work of the Medico-Political Committee, said that a great deal of attention had been given to the Nursing Homes Registration Bill. The policy formulated at the last Representative Meeting embodied three particular points: (1) compulsory delegation of powers of registration to a committee on which doctors and nurses must be represented; (2) medical records of every kind to be free from inspection; (3) all premises under the control of a registered medical practitioner to be exempt from the operation of the bill. The Select Committee, before whom the witnesses appointed by the Association gave evidence, had decided that this last point could not be conceded, though it was favourable to the other points in the Association's policy. The bill had been well received in the House, it was going into committee very soon, and there was every prospect of its passage this session. His feeling was that there was no hope of persuading the House of Commons to consent to the exemption of doctors' homes, though possibly some modification might be obtained in the Committee stage in the case of medical men who had a single resident patient under their care.

Sir Richard Luce also said that in his view there was no chance of Parliament consenting to a special exemption of medical practitioners' homes. One point affecting professional secrecy which should be safeguarded was with regard to regulations requiring, not only a record of deaths occurring in the home to be furnished, but also the cause of death. He did not think that the cause of death should be required to be given save to the registrar. The inspection of the homes would be carried out by the medical officer of health of the supervising authority, and it should be insisted that the supervising authority was a large one—that the right of inspection, for example, should be granted only to such authorities as had a whole-time officer.

Dr. Fothergill deprecated dropping the objection to the registration of the homes of medical practitioners. He failed to see why, if a maternity home in which a doctor was resident could be exempted under the Midwives and Maternity Homes Act, the same exemption should not apply to any other home under the control of a practitioner. Dr. Bone said that he would like the Council to express its opinion whether this point should be dropped or an endeavour made to obtain a permissive clause on the lines of Section XI of the Midwives and Maternity Homes Act. Dr. Brackenbury thought that if it was the case that this principle of exemption could not be supported in Parliament it had better be relinquished. The Council, by a show of hands, decided to relinquish the policy of asking for exemption.

Dr. Bone then passed in review other action taken by his committee. The results of the conferences which had taken place with the professional defence societies had been very satisfactory. The reintroduction of the Mental Deficiency Bill had been noted by the committee. Another matter upon which the committee would shortly be engaged was a new wording of the death certificate, consequent on the recent Births and Deaths Registration Act. A discussion with Mr. Vivian, the Registrar-General, would take place at an early date.

Supervision of Medical Officer by Town Clerk.

Dr. Lewys-Lloyd, for the Public Health Committee, brought forward the question of the post of medical officer of health for Smethwick, whose department, it was ascertained, would be under the supervision of the town clerk. The committee, after setting out certain paragraphs of the section on "Local government and local finance" in the fifth annual report of the Ministry of Health, which dealt with the powers of control exercised by the town clerk over other officers, and to which the town clerk of Smethwick had referred, recommended that the Ministry be informed that the Council was not in agreement with the views therein stated, and that it was impossible for town clerks to be really responsible for the work carried out by the medical officer of health and his subordinate medical officers. Dr. Lyndon, while agreeing with the recommendation, thought that the opinion of the Ministry, as set out in its annual report, had been misapprehended. Dr. Brackenbury thought there was real matter for protest in the doctrine laid down by the Ministry with regard to the responsibility of one officer for the general supervision of the whole of the business of the local authority. The recommendation as it stood was carried.

Other public health questions touched upon in the report of the committee included that of the status of tuberculosis officers, and the Council agreed that steps should be taken to obtain assent to the proposition that all tuberculosis officers in charge of areas so large that their clinical work could not possibly be supervised by the chief tuberculosis officer should be considered, for the purposes of the scale of commencing minimum salaries, to be officers in charge of departments, and entitled to the minimum commencing salary of £750 a year.

Dogs' Protection Bill.

Dr. Hawthorne, as chairman of the Science Committee, reported on the steps taken to organize opposition to the Dogs' Protection Bill. A petition against the bill had been prepared and circulated among the medical members of university staffs, medical schools, and teaching hospitals, and was being signed satisfactorily. It had been suggested to secretaries of Divisions and Branches that they should use their influence with members of Parliament to emphasize their objections to the measure. A conference attended by a remarkably representative number of delegates from universities, colleges, and scientific bodies was held in that room two days previously, when resolutions against the bill were unanimously carried. The bill was down for second reading on April 29th, but as it was third on the list its parliamentary chances appeared rather slender. Nevertheless, whatever was the fate of this particular bill, there was a strong feeling among many with whom his committee had taken counsel that unless public opinion was steadily and sufficiently educated a bill similar to the one now brought forward would before long be accepted by the House of Commons.

The Poisons and Pharmacy Acts.

Dr. Bone, who was one of the witnesses on behalf of the Association before the Committee on the Poisons and Pharmacy Acts, asked for the opinion of the Council on a matter which had been put to the witnesses by the Committee—namely, as to the restrictions which should govern the selling or dispensing of the preparations under the Acts. His own view was that the drugs in question should not be sold over the counter, but only dispensed on a doctor's prescription, and that such dispensing should be done on not more than three separate occasions, but that the Association was not interested in the machinery by which this was done, whether by a new schedule or otherwise.

Dr. Hawthorne's view was that the restrictions should be those which Dr. Bone had just stated, but that they should be secured by the construction of a new schedule under the *Poisons Act*.

After a brief discussion the Council voted on the proposal of Dr. Bone and of Dr. Hawthorne, and the latter had the majority.

Other Business.

Several other reports of committees were approved without giving rise to any discussion. Among these was the report of the Dominions Committee, brought forward by Sir Jenner Verrall, the principal matters in which were a statement on the present improved position of the East African Medical Service—improved so far, at least, as the existing members of the service were concerned—and also the bill to regulate medical education in India. With regard to this latter, however, Sir Jenner Verrall understood that the bill was moribund.

On the report of the Naval and Military Committee, Sir Richard Luce mentioned the shortage of candidates for the R.A.M.C. Notwithstanding the improved conditions of pay and service, and the introduction of a system of nomination through the medical schools, the War Office was still experiencing difficulty in recruitment. The committee had authorized him to draw up a letter for issue to the medical schools pointing out the advantages of the R.A.M.C. as a career.

Dr. Brackenbury made a statement on the position with regard to the proposals for the reform of the Poor Law. The Poor Law Reform Committee of the Association had put forward the two points in which the provisional proposal of the Minister was not in agreement with Association policy—namely, that the Minister was not favourable to the principle of compulsory co-option on the new health committees, and, further, that he proposed to give county councils a general supervisory authority over the health activities of other local authorities in their area. The committee could now only await the introduction of the bill.

Dr. Wallace Henry introduced the report of the Ophthalmic Committee, which dealt with a number of matters, more especially with difficulties which have arisen in the administration of ophthalmic benefit. These difficulties have been brought by the committee to the notice of the Ministry of Health. The committee also reported that the Association's ophthalmic list now contained 899 names, including duplicates, or 756 individuals.

The Council, sitting *in camera*, considered a report presented by its chairman, who is also the chairman of the Building Committee, on the progress made with regard to extension of the Association's headquarters.

The Council decided, on the recommendation of the Office Committee, to adopt a proposal by Dr. Fothergill to make a permanent record, in suitable volumes, of the signatures of present and future members of Council and of the Representative Body.

The Science Committee brought forward certain amendments of the Library Rules with the object of securing the more prompt return of borrowed books or periodicals.

It was resolved, on the recommendation of the Science Committee, that the Sir Charles Hastings Clinical Prize, 1927, should be awarded to Dr. J. S. Manson of Warrington for his clinical study entitled "Observations on human heredity," and that Honourable Mention be awarded to Dr. James Alston of Edinburgh for his clinical study on "The treatment of suppurating and other inflammatory lesions by magnesium sulphate"; also that the Stewart Prize be awarded to Sir Malcolm Watson, M.D., LL.D., in recognition of the scientific and administrative work that has freed large tracts of tropical Malaya from malaria, and has proved of high service both to preventive medicine and to economic developments. Sir Humphry Rolleston and Professor W. E. Dixon were thanked by the Council for examining and reporting on the ten clinical studies entered for the Hastings Prize.

The Council approved the second report of the Subcommittee on Rheumatic Heart Disease in Children, and authorized its publication in an early issue of the JOURNAL (SUPPLEMENT, April 16th, p. 121).

The Council then devoted the last hour of its session to considering the draft Annual Report. Various emendations were suggested and adopted, and, subject to these being made, the Report was approved and ordered to be circulated to Divisions and Branches, and submitted to the Annual Representative Meeting in Edinburgh next July.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships, as follows:

A Scholarship, known as the ERNEST HART MEMORIAL SCHOLARSHIP, of the annual value of not more than £200, and three other RESEARCH SCHOLARSHIPS, each of the annual value of not more than £150, for research in any subject (including State Medicine) relating to the Causation, Prevention, or Treatment of Disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1927. A Scholar may be reappointed for not more than two additional terms. *A Scholar may hold a junior appointment at a University, Medical School, or Hospital* provided the duties of such appointment do not interfere with his work as a Scholar.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

Applications.

Applications for Scholarships and Grants for the year 1927-28 *must be made not later than Saturday, June 4th, 1927*, on the prescribed form, a copy of which will be supplied by the Medical Secretary on application. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated to whom reference may be made.

March 5th, 1927. ALFRED COX, *Medical Secretary*.

TABLE OF DATES.

May 7, Sat.	Publication in SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office where there are contests in above elections.
May 10, Tues.	Last date for receipt at Head Office of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given.
May 14, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by *grouped* Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body Publication in SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given Last date for election of Representatives and Deputy Representatives
May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh). *A.R.M.* (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	Council (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary*.

British Medical Association.

ANNUAL REPORT OF COUNCIL, 1926-27—*(continued).*

APPENDIX II.—FINANCIAL STATEMENT FOR THE TWELVE MONTHS ENDING 31ST DECEMBER, 1926.

Balance Sheet 31st December, 1926.

Dr. **Cr.**

LIABILITIES.

Having examined the Balance Sheet, dated 31st December, 1926, and Accounts with the Books and Vouchers of the Association, except as regards the Irish Committee and Scottish Committee Accounts, and having received all the information and explanations we have required, we report that the Balance Sheet is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Association according to the best of our information and the explanations given to us and as shown by the Books of the Association.

We have inspected the Lease of the New Building and the Disposition in favour of the Association of the premises in Edinburgh, and have verified the Investments of the Association on General Account, on account of the Trust Funds, and of the Office Staff Superannuation Fund, and have further ascertained that the Deeds of the Freehold Property, 429, Strand, Agar Street, and Harvey's Buildings, are held by the Westminster Bank as security for the sum advanced.

We further report that we have examined the Accounts, with the books and vouchers, of the Medical Benevolent Funds for whom the Association receives remittances, and found them correct.

N. BISHOP HARMAN, F.R.C.S.,
Treasurer.

L. FERRIS-SCOTT, F.C.A.,
Financial Secretary and Business Manager.

PRICE, WATERHOUSE & CO.,
3, Frederick's Place, Old Jewry, London, E.C.2.
23rd March, 1927.

APPENDIX VII.

(NOTE.—*Referred to, in error, in para. 167 of the Annual Report, as Appendix VI.*)

CONTRIBUTORY SCHEMES FOR HOSPITAL BENEFIT.

A CONTRIBUTORY SCHEME AS REFERRED TO IN THIS MEMORANDUM IS DEFINED IN THE POLICY OF THE BRITISH MEDICAL ASSOCIATION AS A SCHEME TO WHICH CONTRIBUTIONS ARE MADE FOR WHICH THERE IS TO BE A STATED OR IMPLIED RETURN.

1. Contributory schemes are springing up in various parts of the country in increasing numbers, and from information received by the Association it is evident that the medical staffs of the hospitals concerned in many instances have not been consulted in connection therewith. The Association is of the opinion that the attention of the members of medical staffs should be drawn to certain fundamental principles which should be insisted upon before any contributory scheme is launched. These fundamental principles are:—

(a) That only persons below a definite income limit should be entitled to join a contributory scheme for hospital benefit.

(b) That (except in emergency) a contributor to a scheme should only be admitted to a hospital upon the recommendation of the attending practitioner.

(c) That recognition should be made of the services of the medical staff.

2. It is essential in any such scheme that there should be a clear definition of what is given or promised in return for the contribution.

3. An examination of many schemes shows that they may or may not contain some statement as to the contractual obligation for the provision of hospital and additional benefits. For example, there is the contributory scheme whereby it is explicitly stated that for the payment of a specified weekly sum the contributor becomes entitled to certain specified benefits, whilst on the other hand certain hospitals in certain areas receive periodic massed payments or contributions from work-people in the neighbourhood in return for which there is no definite guarantee that hospital benefit will be forthcoming to the contributor should occasion demand it, although in such cases the assumption that such benefits will be forthcoming is understood to be implied.

4. In the provinces some Hospital Saturday Fund contributions come under the latter category.

5. It would appear to be desirable that in any contributory scheme the presence, limitation or absence of a contractual obligation for the provision of hospital and additional benefits should be plainly stated to the contributors.

6. The establishment of a definite income limit and the admission to the hospital via the attending practitioner are essential in the interests of the medical staffs of the hospitals and the private practitioner who is not on the staff.

7. Modern progress in medical science, the introduction of costly appliances for diagnosis and treatment, the need for more prolonged clinical observation due to the increased complexity of medical, surgical, and special department work, and many other factors, have driven people, who formerly obtained medical and surgical advice from the private practitioner in their own homes or in a nursing home, to seek admission to a voluntary hospital through sheer inability to meet the demands made upon their purses.

8. It must, therefore, be fully recognised that the clientele of a hospital is now much more widely distributed, and that persons who until recently would never have contemplated entering a hospital are now only too anxious to obtain treatment there. It cannot be fairly claimed, however, that many of the persons who are treated in the voluntary hospitals should receive such treatment free of charge or for such a small contribution as, for example, the payment of a penny, twopence, or threepence a week, by means of a contributory scheme.

9. Persons above the income limit (which may vary in different areas but should be clearly defined and put in force) should not be permitted to obtain hospital benefit through any contributory scheme unless such scheme is so drawn as to take into consideration their particular financial circumstances. In any event they should pay the full cost of the maintenance and the agreed treatment fees.

10. In order to prevent abuse the recommendation by the attending practitioner should be insisted upon and therefore, unless the case is one which the attending practitioner considers on medical grounds to be a suitable one for hospital treatment, admission should be refused even although the person concerned is a member of a contributory scheme.

11. The need for this safeguard is perhaps most evident in connection with the out-patient departments of the voluntary hospitals. The amount of work carried on at the out-patient departments of some of our hospitals ought to be curtailed, and only such treatment should be given as cannot consistently with the best interests of the patient be undertaken by a general practitioner of ordinary professional competence and skill. The primary purposes of the out-patient department should be consultation, and the giving of such treatment as cannot be given by a private practitioner independently of the hospital.

12. If those in charge of the out-patient departments were to refer all cases not suitable for hospital treatment to practitioners concerned with the cases, and to refuse all further treatment which comes within the scope of the practitioner of ordinary competence and skill, there would be less abuse of hospitals and much less waste of the time and skill of the staff and the materials of the hospital.

13. The practice of referring a case to a hospital for advice when the patient is able to pay a fee (modified if necessary) to a consultant seeing the patient at his own home cannot be too strongly condemned, both because it is unfair to the medical profession and because it undermines the self-respect of those allowed to accept charitable services when they can afford to pay for them.

14. A proper regulation of the work at the out-patient departments of our hospitals will do much to remove many of the difficulties, financial and otherwise, which face the hospitals.

15. Without a definite income limit in any contributory scheme, the field of work of a member of a hospital staff in his private capacity is bound to diminish, as many persons who formerly obtained the advice of the member of the hospital staff in his private capacity will in future claim such advice at the hospital as one of the benefits of the contributory scheme in the area.

16. It is perhaps the junior members of the medical staff of the voluntary hospitals who will suffer most in this respect, and it is evident from information which the Association has collected that the pinch is being felt already in many areas. The Hospitals Committee of the Association would, therefore, urge upon the members of the medical staffs the necessity for taking a keen interest in any proposals for the establishment of schemes for hospital benefit upon a contributory basis, and for insisting

(1) that only persons below a definite income limit should be entitled to join any such scheme, and

(2) that admission to the hospital whether as an out-patient or in-patient should, except in emergency, only be upon the recommendation of the attending practitioner. (This does not mean that a person applying for out-patient examination and/or treatment, without such recommendation, should always be turned away without being seen.)

17. The following maximum scale of income limits, subject to economic and local variations and to periodic revision, is suggested:—

Class 1—Limit of Income £200 a year.

(a) Single persons over 16 years of age.
(b) Widow or widower without children under 16 years of age.

Class 2—Limit of Income £250 a year.

(a) Married couples without children under 16 years of age.
(b) Persons with one dependent under 16 years of age.

Class 3—Limit of Income £300 a year.

(a) Married couples with a child or children under 16 years of age.
(b) Persons with more than one dependent under 16 years of age.

The applicability of this scale with or without modification is, of course, one of the matters which should receive earnest attention at the inception if possible of any contributory scheme.

18. The third fundamental principle outlined in paragraph 1, viz., the recognition financially of the services of the medical staff should engage the serious consideration of the medical staffs.

19. Nearly everyone is now agreed that for the work which a hospital does for the State the hospital and the medical staff should receive payment. This was recognised in the treatment of discharged and disabled soldiers during the war, and in many hospitals as much as 20 per cent. of their gross receipts under such arrangements was allocated to the medical staffs.

20. Again, it is generally agreed that for cases referred to the hospital for treatment by Local Authorities, such as the Education Authority, payment should be made, and that this should include some payment for the services of the medical staff. Indeed, whenever the board of management of a voluntary hospital enters into a financial arrangement with a public authority, an employer of labour, approved society or insurance company, or under a contributory scheme or otherwise, for the reception of patients, such arrangement should be so framed as to cover not merely the cost of maintenance but of medical

treatment also, and a percentage of all such receipts should be passed into a fund at the disposal of the visiting medical staff of the hospital.

21. *A definite financial arrangement having been made by some body or company which has accepted responsibility for the provision of hospital benefit for a group of persons under certain defined conditions, it cannot be expected that the medical staffs of the voluntary hospitals concerned should give their services free.*

22. The contract made is for hospital benefit as a whole, consequently the payment made under any financial arrangement is for treatment as well as for accommodation and maintenance. Therefore the Association recommends that a percentage of the money received by the hospital under such an arrangement should be allocated to a Staff Fund at the disposal of the staff.

23. It is necessary to point out that in connection with many of the contributory schemes which are springing up all over the country no definite financial arrangement is entered into with the hospital or hospitals concerned, the scheme being organised by some group which gives a contribution to the hospital out of the funds collected. In other instances the hospital itself organises the scheme. In other areas although no definite contributory scheme, as such, exists, the hospital receives contributions for patients from *approved societies, insurance companies, employers of labour,* and/or by massed or periodic payments by employees. The Association considers that the visiting medical staff should, in all these circumstances, also receive recognition for its services either by a percentage passing into the Staff Fund or by a fixed honorarium. An honorarium was suggested to meet the objections of those who were definitely opposed to the staff fund proposal in these particular instances.

24. In the opinion of the Hospitals Committee the time has arrived for insistence upon the three fundamental principles enumerated in paragraph 1 of this Memorandum.

Association Notices.

BRANCH AND DIVISION MEETINGS TO BE HELD.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—The annual meeting of the Bournemouth Division will be held on Wednesday, May 4th, in St. Peter's Small Hall at 4.15 p.m. Agenda: Election of officers; consideration of Dr. Asten's resolution for the Representative Body; policy of Division towards Dogs' Protection Bill; question of extension of Division boundary. The chairman invites members to tea at 4 p.m.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—A meeting of the West Dorset Division will take place to-day (Friday, April 29th), at the Durlston Court School, Swanage, near the Children's Hospital, at 2.45 p.m. Cases will be shown and a paper read by Dr. W. A. Rees, O.B.E. Tea will be served afterwards at the Trocadero Restaurant by the courtesy of the Swanage members. A report and recommendations of the Divisional Ethical Committee will be brought forward.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.—The annual general meeting of the Lanarkshire Division will be held at 242, St. Vincent Street, Glasgow, on Wednesday, May 4th, at 3 p.m.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, May 3rd, at 9.30 p.m. Dr. H. C. Lucey will read a paper on clinical pathology.

METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION.—A meeting of the Hampstead Division will be held at the Central Library, Finchley Road, on Thursday, May 12th, at 8.30 p.m. Agenda: Election of representatives and deputy representatives; adoption of resolution concerning the scale of commencing salaries for public health medical officers; address by Dr. R. A. O'Brien, C.B.E., medical director of the Wellcome Physiological Research Laboratories, on "Immunity to diphtheria and scarlet fever by means of toxin-antitoxin." Dr. Graham Forbes, medical officer of health for the County of London, has also promised to speak.

METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.—The annual meeting of the Hendon Division will be held at the Hendon Cottage Hospital to-day (Friday, April 29th), at 8.30 p.m. Agenda: Report of the Executive Committee on the work of the Division during the past year; election of officers and Executive Committee for the coming year; any other business.

METROPOLITAN COUNTIES BRANCH: SOUTH MIDDLESEX DIVISION.—A meeting of the South Middlesex Division will be held at St. John's Hospital, Twickenham, on Wednesday, May 4th, at 8.15 p.m. Agenda: General business; election of officers; reports of the representatives and of the honorary secretary.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—At the meeting of the South-West Essex Division, to be held at Claybury Mental Hospital, Woodford Bridge, on Tuesday, May 3rd, at 3.30 p.m., Dr. G. F. Barham, medical superintendent, will give a demonstration of cases.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, to-day (Friday, April 29th), at 8.15 p.m. Dr. L. G. Parsons, physician to Queen's Hospital and the Children's Hospital, Birmingham, will give an address on "Some points in the diagnosis and treatment of pneumococcal infections in childhood." Tea and coffee will be served at 8 p.m.

NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.—It is proposed to hold the annual dinner of the Bishop Auckland Division to-day (Friday, April 29th), at 7.30 for 8 p.m., in the King's Café, Newgate Street, Bishop Auckland. Tickets £1 1s. each (inclusive of wines). Guests may be invited.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.—The next meeting of the Blyth Division will be held at Old Brewery House, Bedlington, on Wednesday, May 4th, at the invitation of Dr. Hudson.

NORTH OF ENGLAND BRANCH: NEWCASTLE-ON-TYNE DIVISION.—*A meeting of the Newcastle-on-Tyne Division will be held* at 7, Windsor Terrace, Newcastle-on-Tyne, on Tuesday, May 3rd, at 8.30 p.m. Agenda: Matters arising from minutes; report re reception and dance; appointment of representatives and deputy representatives; consideration of Annual Report of Council.

NORTHERN COUNTIES OF SCOTLAND BRANCH: BANFF, MORAY, AND NAIRN DIVISION.—The annual meeting of the Banff, Moray, and Nairn Division will be held at the Commercial Hotel, Keith, on Saturday, May 7th. Luncheon will be taken at 2 o'clock, and the meeting will be held immediately thereafter. The Keith Golf Club has extended the courtesy of the course to the members of the Division for the afternoon. Agenda: Secretary and treasurer's annual report for 1927; appointment of office-bearers for current year and representatives in Representative Body; Annual Report of Council; "Black List" addenda; any other competent business.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.—The annual meeting of the Portsmouth Division will be held at the Queen's Hotel, Southsea, on Thursday, May 5th, at 9 p.m. The annual dinner of the Division will be held at the Queen's Hotel, Southsea, on Wednesday, May 11th, at 8 p.m. Tickets 7s. 6d. each. After dinner an address will be given by Sir StClair Thomson, F.R.C.P.Lond., entitled "The London physician in the eighteenth century." Members intending to be present at the dinner are requested to notify the honorary secretary, Dr. H. H. Warren, "Devonia," Goldsmith Avenue, Southsea, as soon as possible, and also to forward the names of any guests they may be bringing.

SOUTHERN BRANCH: WINCHESTER DIVISION.—At the invitation of Dr. R. Bartlett the next meeting of the Winchester Division will be held at Linden House, Romsey, on Thursday, May 12th, at 3.30 p.m. Agenda: Correspondence; election of representative and deputy representative; Treasurer's Cup golf competition; *adoption of resolution concerning the scale of minimum commencing salaries* for public health medical officers; discussion on "The association of cases of herpes and varicella," to be opened by Dr. Bartlett. Members taking part in the discussion are asked to give illustrative cases.

SOUTH-WESTERN BRANCH.—An intermediate meeting of the South-Western Branch will be held on Wednesday, May 18th, at Liskeard in the afternoon. Members are asked to notify the secretary as soon as possible of any cases, notes, papers, specimens, or notices of motion that they wish brought forward. Papers should be limited to fifteen minutes.

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.—A meeting of the South Suffolk Division will be held at the East Suffolk and Ipswich Hospital to-day (Friday, April 29th), at 3.30 p.m. Tea will be provided. Agenda: Business arising out of minutes; British Medical Association monthly circular; an address on the effects of radiology and electro-therapeutics on modern medicine will be given by Dr. A. Cameron Young, radiologist to the Ipswich and East Suffolk Hospital. Dr. A. M. N. Pringle has promised to open a discussion on the chest, Dr. C. K. Moseley on the nose, and Dr. F. C. Wetherell on ultra-violet rays. There will be a demonstration of apparatus.

SURREY BRANCH: CROYDON DIVISION.—The annual meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, May 4th, at 3.30 p.m.; it will be followed by a clinical meeting.

SURREY BRANCH: GUILDFORD DIVISION.—A clinical meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, May 5th, at 4 p.m. (tea served at 3.45 p.m.). At a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, to be held on May 19th, *Professor Hobday will open a discussion on clean milk.* Further particulars will be announced later.

SURREY BRANCH: REIGATE DIVISION.—The annual meeting of the Reigate Division will be held at the East Surrey Hospital, Reigate, on Wednesday, May 11th, at 4 p.m.

SUSSEX BRANCH: BRIGHTON DIVISION.—A clinical meeting of the Brighton Division will be held at the Haywards Heath Mental Hospital on Monday, May 2nd, at 3.45 p.m.

SUSSEX BRANCH: CHICHESTER AND WORTHING AND HORSHAM DIVISIONS.—A combined meeting of the Chichester and Worthing and Horsham Divisions will be held in the Dolphin Hotel, Chichester, on Wednesday, May 4th, at 6.15 p.m. Business: Appointment of representative to the Annual Representative Meeting; Annual Report of Council (SUPPLEMENT, BRITISH MEDICAL JOURNAL, April 23rd); receipt of any resolutions for the agenda of the Annual Representative Meeting. Thereafter the annual meeting of the Chichester and Worthing Division will be held for the election of office-bearers. Dinner will be served in the hotel at 7.30 p.m. After dinner Dr. A. H. Bostock will open a discussion on "The operative treatment of fractures." Members of both Divisions who intend to be present are asked to notify Dr. Mackintosh before Monday, May 2nd, in order that adequate arrangements may be made.

WEST SOMERSET BRANCH.—A meeting of the West Somerset Branch will be held on Tuesday, May 3rd, at the Taunton and Somerset Hospital, at 4.15 p.m. Agenda: Election of representative and

deputy representative; consideration of Annual Report of Council; British Medical Association scheme for dealing with rheumatism in children; correspondence.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.—The annual meeting of the Hereford Division will be held at 20, East Street, Hereford, on Monday, May 2nd, at 3.15 p.m. Agenda: Election of officers, representatives, and Executive Committee; Annual Report of Council; post-graduate lectures; correspondence.

YORKSHIRE BRANCH: DEWSBURY DIVISION.—The annual meeting of the Dewsbury Division will be held in the Man and Saddle Restaurant, Dewsbury, on Tuesday, May 3rd. Coffee will be served at 8.15 p.m.

YORKSHIRE BRANCH: HARROGATE DIVISION.—The annual meeting of the Harrogate Division will be held at the Imperial Café, Harrogate, on Wednesday, May 4th, at 8.30 p.m. Agenda: (1) Arrangements for meeting of Yorkshire Branch to be held in Harrogate on June 11th; (2) Annual Report of Council; (3) steps taken against activities of antivivisection societies; (4) B.M.A. Charities scheme; (5) annual report and financial statement; (6) election of officers.

Meetings of Branches and Divisions.

CAMBRIDGE AND HUNTINGDON BRANCH: ISLE OF ELY DIVISION.

THE annual general meeting of the Isle of Ely Division was held at March on April 12th.

The accounts were examined and passed, and the HONORARY SECRETARY read the annual report of the year's work of the Division.

The following officers were elected for the ensuing year:

Chairman, Dr. A. E. P. Parker (Wisbech). *Vice-Chairman*, Dr. J. G. Slade (Ely). *Honorary Secretary*, Dr. A. C. S. Waters (March). *Representatives and Deputy Representative in Representative Body*, Dr. A. C. S. Waters and Dr. C. E. Stephens.

Requests for the reduction of fees for attendance on juvenile members and adult members of two clubs were considered. It was unanimously resolved not to reduce the scale of fees in force in the Isle of Ely—namely, 8s. for juveniles and 16s. for adults.

It was decided to send a letter to the member of Parliament for the Isle of Ely, explaining the attitude of the medical profession in relation to the Dogs' Protection Bill and asking him to vote against its second reading.

At the conclusion of the general business a most interesting and instructive address was delivered by Mr. W. H. BOWEN, M.S.Lond., F.R.C.S.Eng., surgeon to Addenbrooke's Hospital, on "Tuberculous glands in the neck" (a clinical study), after which a discussion followed. A vote of thanks was unanimously passed thanking the lecturer for his valuable paper.

CEYLON BRANCH.

THE second meeting of the session of the Ceylon Branch was held in the Colonial Medical Library on February 16th, when forty members were present.

Drs. G. R. Hany, P. F. L. de Livera, and W. Samarasinghe were elected members of the Association.

The PRESIDENT delivered his inaugural address on "Quarantine." A vote of thanks to the Hon. Dr. J. F. E. Bridger for his address was, on the motion of Sir H. MARCUS FERNANDO, carried with acclamation. The meeting terminated with a vote of thanks to the chairman.

LANCASHIRE AND CHESHIRE BRANCH: BLACKBURN DIVISION.

A MEETING of the Blackburn Division was held on April 12th, under the presidency of Dr. JEFFREY RAMSAY, chairman of the Division; there was a good attendance.

Professor ARTHUR HALL (Sheffield) gave a British Medical Association Lecture on "The reflexes which determine and control posture." The lecture consisted primarily of an exposition of the work of Magnus and his school which has been carried on for several years in the University of Utrecht. The mechanism of the tonic reflexes and righting reflexes was considered in detail, and the laws which Magnus has formulated with regard to them were fully explained. The lecture was illustrated by numerous lantern slides and models. A series of photographs was shown, demonstrating the occurrence of these reflexes in normal animal life, together with ordinary and slow motion cinematograph pictures of various normal animals in movement, and of cases of epidemic encephalitis, illustrating the typical changes of posture and movement in Parkinsonism.

The CHAIRMAN, Drs. LANGLEY, POSTON, and BANNISTER took part in the discussion which followed.

A vote of thanks to the lecturer was, on the motion of Dr. AITKEN, seconded by Dr. GREAVES, carried with acclamation.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.

A MEETING of the Division was held in the Knight Memorial Hospital, Blyth, on April 20th, when Dr. FAIRLIE was in the chair. Mr. ARKLE, specialist in eye diseases, of Newcastle, read an interesting paper on "Eye conditions of interest to colliery practitioners," points about miner's nystagmus and injuries to the eyes being dealt with. There was considerable discussion, during which Mr. Arkle was asked many questions. A vote of thanks was accorded to Mr. Arkle for his address. The secretary was asked to convey the congratulations of the Division to Dr. Milne, who was recovering from pneumonia.

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.

A MEETING of the South Suffolk Division was held at Ipswich on March 25th, when Dr. W. F. FRYER was in the chair. The British Medical Association monthly circular was read. After the routine business an address on the need for closer co-operation between hospital staffs and general practitioners was given by Dr. H. N. BARON, to whom a hearty vote of thanks was accorded for a most interesting address.

SUFFOLK BRANCH: WEST SUFFOLK DIVISION.

A MEETING of the West Suffolk Division was held at the Angel Hotel, Bury St. Edmunds, on April 23rd, when Dr. GRACE M. G. GRIFFITH was in the chair.

After dinner Sir THOMAS HORDER opened an informal discussion on the most useful methods of supplementing clinical diagnosis. He emphasized the importance of ordinary clinical examination, pointing out that its methods were by no means exhausted yet, and that there was still possibility of discovering fresh and important signs of disease. He alluded to some mechanical aids to diagnosis, such as the electric auroscope, ophthalmoscope, and sigmoidoscope, and expressed the doubt whether sufficient advantage was taken of the assistance afforded by these instruments. He discussed in some detail the uses of radiography, and the necessity for close co-operation between the practitioner and radiographer if the value of radiographic findings was to be properly assessed. Passing to pathological and bacteriological investigations, Sir Thomas laid stress on the necessity for close co-operation between the clinician and the laboratory worker, mentioning the pitfalls which resulted from its absence.

In the discussion which ensued Drs. A. H. BYGOTT, H. G. KILNER, R. H. WILKIN, and B. E. A. BATT took part.

On the motion of Dr. HINNELL a hearty vote of thanks was accorded to Sir Thomas Horder with acclamation.

The evening was a most successful one and was thoroughly appreciated by all who attended.

Sir THOMAS HORDER, who has recently consented to act as consulting physician to the West Suffolk General Hospital, visited the hospital on April 24th. Nineteen doctors attended in response to the invitation of the committee and medical staff to all practitioners in West Suffolk to attend. Sir Thomas gave a most interesting and instructive demonstration on selected cases from the wards, which lasted until 1 o'clock, and which was much appreciated by all present.

BOOKS ADDED TO THE LIBRARY.

THE following books were received during February and March, 1927:

Annals of Medical History. Volume VIII, Part 4. 1926.
Arvedson: Medical Gymnastics and Massage. Second edition. 1925.
Atzler, E.: Körper und Arbeit. 1927.
Baker, J. R.: Sex in Man and Animals. 1926.
Barker, L. F., and Cole, N. B.: Rheumatism: its Meaning and Menace. 1926.
Berman, L.: The Personal Equation. 1925.
Bose, L.: Scientific and Other Papers. Volume 2. 1925.
Bousfield, P.: Pleasure and Pain. 1926.
Bowers: Manual of Psychiatry. 1925.
Bowes, P. K.: X-Ray Apparatus. 1926.
Brown, L., and Sampson, H. L.: Intestinal Tuberculosis. 1926.

Correspondence.

Ophthalmic Benefit.

SIR,—I am now able to supplement my figures of October last (SUPPLEMENT, October 23rd, 1926, p. 186), and to give an analysis of 100 consecutive cases examined by me under the ophthalmic benefit scheme, sent by societies known by me to be sending all their claimants direct to an ophthalmic surgeon.

We have been told that 95 per cent. of these ophthalmic benefit cases are simple uncomplicated refractions that can be dealt with by any competent refractionist, and that the societies are wasting funds in referring such to us.

My figures show that with a liberal interpretation only 48 come under this category—that is, in these, with reasonable care, proper glasses might have been ordered by anyone treating the eye as a piece of mechanism; 32 others proved to be difficult refraction cases, many of these demanding a cycloplegic or mydriatic to enable one to prescribe with any confidence or to desist from prescribing. This number includes several cases that had already had wrong glasses ordered by qualified opticians, and also 11 cases in which the correct advice was to dispense with glasses altogether or to continue without a change. It would be interesting to know what percentage of uncomplicated refraction cases, referred direct to opticians by societies that adopt this method, are sent back with the verdict "no glasses required," or "no change in present glasses." To refer all cases to those whose interest it is to sell glasses seems to be a mistaken policy.

The remaining 20 cases were altogether unsuitable for "optical" treatment, being complicated, including injury (3), early cataract (5), conjunctivitis (4), and one each of miner's nystagmus, neurasthenia, toxic amblyopia, cysts, vitreous haemorrhage, macula disease, quiet cyclitis, and meningitis.

Thus it was greatly to the benefit of the patient, and probably also to the financial advantage of the societies, that 52 per cent. of ophthalmic benefit cases so presented themselves. The chief defect of the scheme, however, remains. We do not get any of the acute cases of eye disease, as the necessary (?) delay of some three weeks before a consultation can be arranged cannot be allowed. It is thus not a consultation service in the ordinary acceptance of that term.—I am, etc.,

A. CHRISTIE REID, M.D., D.O.Oxon.

Nottingham, April 15th.

Anaesthetic Fees.

SIR,—Dr. Brackenbury having stated that he never gave any pledge or made any bargain in consequence of which panel practitioners were given a capitation fee larger than the Minister of Health had previously been willing to grant, it would be interesting to hear his views on the grievance I have been permitted to ventilate. I venture to submit for the consideration of the Insurance Acts Committee the necessity of framing some definite regulation which, if complied with both in the letter and in the spirit, would make its application by any Panel Committee binding, instead of being, as at present, dependent upon the caprice of its members. In cases admitted to any hospital to which all medical men practising in the same district have perfect freedom of access, there can be no reasonable objection to payment of anaesthetic fees being made to its staff. Such hospitals are few and far between, and the money paid out in anaesthetic fees would be such a very small proportion of the general capitation fund available for distribution amongst panel practitioners in the county as to make any individual loss incurred unworthy of notice. At the same time it would, to a little extent, help to remove the grievance I have complained of and which is shared by a large number of practitioners, who have preferred to remain silent when they might have urged upon those in whose hands lies the removal of the grievance—I mean the Insurance Acts Committee—the necessity of considering the matter by joining me in publicly protesting against its existence.—I am, etc.,

D. W. STANDLEY.

Greenhithe, April 22nd.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders R. Willan to the *Excellent* temporary; H. B. Hill to the *President* for three months' post-graduate course.

Surgeon Lieutenant Commander J. C. Sinclair has been promoted to the rank of Surgeon Commander.

Surgeon Lieutenant Commanders J. F. Ainley to the *Iron Duke*, temporary; A. W. Cocking to the *Canterbury*, temporary; B. S. Collings to the *Revenge*, temporary, for Invergordon Hospital, and to the *Canterbury*; T. N. D'Arcy to the *President* for three months' post-graduate course; J. T. M. Campbell to the *Defiance*; K. A. I. Mackenzie to the *Victory* for P. and R.T. School, Portsmouth.

Surgeon Lieutenants G. Phillips to the *Clematis*; R. R. Baker to the *Pembroke* for Royal Marines Infirmary, Chatham; A. G. L. Brown, D.S.C., to the *Campbell*; M. Brown to the *Britannia* for R.N. Sick Quarters, Dartmouth.

ROYAL ARMY MEDICAL CORPS.

Major John R. P. Allin, M.C., to be temporary Captain and temporarily relinquishes the rank of Major.

The following Captains to be Majors: R. B. Myles, O.B.E., G. W. Rose (prov.), J. T. McConkey (prov.), R. McKinlay.

To be temporary Lieutenants: D. J. Allan, G. M. Cooper.

ROYAL AIR FORCE MEDICAL SERVICE.

The following Flight Lieutenants are promoted to the rank of Squadron Leader: T. R. S. Thompson, R. S. Topham.

INDIAN MEDICAL SERVICE.

The Hon. Major-General T. H. Symons, C.S.I., O.B.E., K.H.S., Director-General, I.M.S., is granted leave on average pay for six months, and Major-General A. Hooton, C.I.E., K.H.P., Surgeon-General, Bombay, is appointed to officiate as Director-General, Indian Medical Service, during his absence.

Lieut.-Colonel A. Whitmore has retired.

REGULAR ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Colonels E. T. Inkson, V.C., D.S.O., and B. Watts, D.S.O., late R.A.M.C., and Captain R. M. Le H. Cooper, having attained the age limit of liability to recall, cease to belong to the Reserve of Officers.

Captain G. T. Baker, M.C., relinquishes his commission and retains the rank of Captain.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Captain G. R. Dobrashian to be temporary Captain and temporarily relinquishes the rank of Captain.

C. F. Mayne, O.B.E., late Surgeon Lieutenant, R.N., to be Captain, with precedence as from October 26th, 1924.

Supernumerary for Service with the O.T.C.—Major H. H. Woollard resigns his commission.

COLONIAL MEDICAL SERVICES.

Dr. K. A. T. Martin appointed Medical Officer of Health for Naivasha, Nakuru, Uasin Gishu, and Trans-Nzioa Districts, and Nakuru, Eldoret, and Kitale Townships, Kenya. Dr. M. E. O'Dea, Director, Medical and Sanitary Services, Medical Department, Gold Coast, has retired on pension. Dr. J. Jackson-Moore, Senior Medical Officer, Nigeria, has been invalided from the service. Dr. D. W. G. Faris appointed Health Officer, Malayan Medical Service. Drs. J. N. Hay and A. G. Coia appointed Assistant Government Medical Officers, British Guiana. Drs. W. Chisholm and H. S. Townsend appointed Medical Officers, Medical Department, Gold Coast. Dr. J. S. Oliphant appointed Medical Officer, Nigeria. Dr. W. H. Hart promoted Senior Medical Officer, Pahang, F.M.S. Dr. P. A. T. Sneath has resigned his appointment as Medical Officer of Health, Gold Coast. Drs. J. W. Graham, J. H. McDonald, and I. Sanderson transferred from Kigoma to Dar-es-Salaam, Dar-es-Salaam to Lindi, and Singida to Kigoma, Tanganyika, respectively.

VACANCIES.

BOLTON EDUCATION COMMITTEE.—Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £600 per annum.

BRIGHTON: ROYAL ALEXANDRA HOSPITAL FOR SICK CHILDREN.—Honorary Physician.

BURTON-ON-TRENT COUNTY BOROUGH.—Assistant Medical Officer of Health, etc. Salary £600 per annum.

CARDIFF CITY MENTAL HOSPITAL, Whitchurch.—Resident Clinical Assistant (male). Honorarium 50 guineas for six months.

CENTRAL LONDON THROAT, NOSE AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—(1) Assistant Out-patient Registrar. (2) Second Resident House-Surgeon (male); salary at the rate of £75 per annum.

CHARING CROSS HOSPITAL, W.C.2.—(1) Physician to Children's Department. (2) Obstetric Registrar.

CROYDON COUNTY BOROUGH.—Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £600 per annum.

CROYDON GENERAL HOSPITAL.—Junior Surgeon.

CYPRUS: SPECIALIST IN VENEREAL DISEASES.—Salary £700 per annum.

DUDLEY COUNTY BOROUGH.—Assistant School Medical Officer and Assistant Medical Officer of Health (male). Salary £600 per annum, rising to £650.

ELIZABETH GARRETT ANDERSON HOSPITAL, Euston Road, N.W.1.—(1) House-Physician. (2) Obstetric Assistant. (3) Two House-Surgeons. Women. Salary at the rate of £50 per annum.

HEREFORDSHIRE GENERAL HOSPITAL, Hereford.—Resident House-Physician. Salary £100 per annum.

HONG-KONG.—Medical Officer of Health. Salary £750-25-£1,000 per annum.

SPECIAL NOTICE TO MEMBERS.

Every Member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he or she belongs.

MATTERS REFERRED TO DIVISIONS.

British Medical Association.

ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

THE Annual Representative Meeting of the British Medical Association will be held in Edinburgh on Friday, July 15th, 1927, and the following days as may be necessary.

RESOLUTIONS BY DIVISIONS AND BRANCHES FOR THE REPRESENTATIVE BODY, TOGETHER WITH RELEVANT RECOMMENDATIONS OF COUNCIL.

[NOTE.—*This includes only those Recommendations of the Council contained in the Annual Report to which Amendments or Riders have been sent in; also any Motions from Divisions and Branches, of which two months' notice must be given.*]

ORGANIZATION.

Remuneration of Members attending Council and Committee Meetings.

Motion by LANARKSHIRE: That the Council be instructed to take such steps as are necessary to secure that members attending meetings of Council and Central Committees be paid reasonable out-of-pocket expenses in addition to railway fares.

MEDICO-POLITICAL.

Consultations under Puerperal Pyrexia Regulations.

Motion by ST. PANCRAS (with reference to para. 113 of Annual Report of Council—see p. 147 of BRITISH MEDICAL JOURNAL SUPPLEMENT of April 23rd, 1927): (i) That the minimum fee payable to a recognized obstetric specialist for each consultation under the Puerperal Pyrexia Scheme be £3 3s. (excluding operative treatment) with reasonable additions for mileage to be mutually arranged with the local authorities; (ii) that the Representative Body is of opinion that the local authority should be empowered by the Ministry of Health to pay a reasonable fee to the general practitioner who meets in consultation an expert called in under the Puerperal Pyrexia Regulations; and (iii) that it be an instruction to the Council to take all possible steps to secure that these resolutions be made effective.

Remuneration of Assistants in General Practice.

Motion by SOUTH-EASTERN COUNTIES (EDINBURGH): That (with reference to para. 135 of Annual Report of Council—see p. 151 of BRITISH MEDICAL JOURNAL SUPPLEMENT of April 23rd, 1927) the words:

> "That in view of the fact that an assistantship is commonly to a young practitioner a continuation of his medical education and training, the value of which is variable and impossible to estimate, no definite figure can in these circumstances be fixed as a minimum salary, but in cases where the above consideration does not prevail and where the practices can afford it, the minimum commencing salary for a whole-time indoor assistant to a practitioner should be £240 per annum, etc. (as in para. (*d*))."

be substituted for the first three lines of following para. (*d*) of Minute 125 of the Representative Body, 1925:

> *Minute 125 (d).* Resolved: That the minimum commencing salary for a newly qualified inexperienced practitioner, acting as a whole-time indoor assistant to a practitioner, should be £240 per annum, with the addition of board and lodging, and in the case of such a practitioner employed on an outdoor basis the board and lodging value should be estimated at from £120 to £.60 per annum according to the circumstances of the individual case; that the only exceptions or possible exceptions to the foregoing should be in the case where, owing to arrangements made for study leave, or to physical disability or other reasons, the assistant is not able to give full time to the work.

Motion by ST. PANCRAS: That (with reference to para. 135 of Annual Report of Council—see p. 151 of BRITISH MEDICAL JOURNAL SUPPLEMENT of April 23rd, 1927) the following para. (*f*) of Minute 125 of the Annual Representative Meeting, 1925, be rescinded:

> *Minute 125 (f).* Resolved: That no steps should be taken for the present to make the foregoing expressions of opinion the policy of the Association, but they should be used for the assistance of the office in advising on points connected with the terms and conditions of the work of assistants. Where an advertisement is offered for insertion in the BRITISH MEDICAL JOURNAL in connexion with an assistantship not in accordance with the foregoing opinions, the attention of the advertiser should be drawn to them in the hope that the advertisement will be amended; but the advertisement should not, if otherwise eligible, be refused.

Administration of Anaesthetics.

Motion: That the following recommendation of Council (SUPPLEMENT, April 23rd, 1927, pp. 147–48, para. 117) be adopted:

> That the policy of the Association (as contained in the paragraphs relating to the administration of anaesthetics approved by the Representative Body in 1910, as part of the evidence given on behalf of the Association before the Departmental Committee on Coroners Law, etc.) be amended to read as follows:
>
> (1) That no person other than a registered medical practitioner should administer any anaesthetic for medical or surgical purposes, except that a registered dentist may administer anaesthetics for dental purposes only;
>
> (2) That where a general anaesthetic is administered it is undesirable that any person should act both as operator and administrator in the same case where this can be avoided, but it must be recognized that cases occur in practice, especially in sparsely populated districts, in which this responsibility must occasionally be undertaken.

Amendment by WILLESDEN: That it is not advisable for the Representative Body to express any additional opinion as to the administration of anaesthetics by dentists.

Amendment by ST. PANCRAS: That the word "anaesthetics" in the fourth line of para. (1) of the Recommendation of Council be deleted and the words "nitrous oxide" substituted therefor.

Remuneration of Practitioners called in on Advice of Midwives.

Motion by DARTFORD: That the Council be instructed to take steps to secure a fee of £3 3s. in place of the existing fee of £2 2s. payable by local authorities to medical practitioners called in on the advice of midwives "for all attendances of a doctor at parturition (i.e., from the commencement of labour until the child is born) whether operative assistance or not is involved, including all subsequent visits during the first ten days, inclusive of the day of birth."

General Medical Council.

Motion by BOURNEMOUTH: That the existing representation, power, and procedure of the General Medical Council need careful revision in order that they may comply more precisely with the changed conditions of medical practice, and that this be remitted to the Council for consideration and report.

PUBLIC HEALTH.

Vaccination Propaganda.

Motion by SOUTHPORT: That the Council be asked to arrange with the Society of Medical Officers of Health that, in areas where cases of small-pox are known to exist, special propaganda work for vaccination should be organized.

NATIONAL HEALTH INSURANCE.

Extended Benefits under the National Health Insurance Acts.

Motion by MARYLEBONE: That the Council be requested to urge the Ministry of Health to provide for extended benefits under the National Health Insurance Acts.

British Medical Association.

CURRENT NOTES.

The Medical Secretary in Ireland.

THE Medical Secretary has recently spent ten days in a visit to the Irish Branches. He began with the Ulster Branch on April 29th, meeting some of the prominent members of the profession at a lunch in Belfast, on the invitation of Dr. R. W. Leslie. This was followed by a successful Branch meeting attended by members from all over Ulster, and in the evening there was a dinner at the invitation of Dr. J. S. Morrow, O.B.E., President of the Branch. Further details will probably be reported by the Branch Secretary, but the impression left on the Medical Secretary's mind was one of strong loyalty to the Association, activity on the part of the Branch, and the likelihood of closer organization of some of the Divisions.

On Tuesday, May 3rd, a meeting of the Munster Branch was held at Cork, under the chairmanship of Dr. W. Rahilly, President of the Branch. The meeting was an excellent one, a special feature being the attendance of a large number of students. It is very probable that the Branch will now resume its former activities, which were suspended owing to circumstances which made it impossible to hold successful meetings. Moreover, as the old Cork Medical Society is now defunct, it is probable that the Branch will become a really active centre for scientific work. The meeting was preceded by a dinner, at which the Medical Secretary and the Irish Medical Secretary (who accompanied Dr. Cox throughout his tour) were the guests. On Wednesday, May 4th, a meeting of the South-Eastern Branch was held at Kilkenny, under the chairmanship of Dr. James P. Barry, President. The meeting was well attended and the discussion which took place led to the belief that the Branch proposes to pursue more actively the social and scientific aims of the Association. On Thursday, May 5th, there was a meeting at Dublin of the Leinster Branch Council, followed by a meeting of the Branch, both under the chairmanship of Sir William Wheeler, in the absence of the President, Dr. Ninian Falkiner. The meeting was very well attended and a good discussion took place as to the future programme of the Branch. The Branch Council was instructed to take the various suggestions made into consideration. The Medical Secretary was the guest of the Branch Council at dinner in the evening at the Shelbourne Hotel. On Friday, May 6th, the Irish Committee met at noon under the chairmanship of Dr. John Mills of Ballinasloe, and the attendance was a thoroughly representative one. The Medical Secretary and Dr. Hennessy laid before the Committee certain proposals arising out of their visits to the Branches, and the work of the Association in Ireland was passed under general review. After the meeting the members of the Committee and Dr. Cox were the guests of the Irish Medical Secretary at a luncheon at the Hibernia Hotel.

The general impression left on the Medical Secretary's mind after his visit was that the profession in Ireland is very favourable to the Association, and recognizes that it is the one body capable of effectively organizing the Irish medical profession. Though the doctors in Northern Ireland and in the Free State have necessarily to deal with different Governments, there is no line of demarcation between the profession in the two parts of Ireland, and the desire to support the Association's Irish Committee as the bond of union between the two sections was very warmly expressed.

On all hands Dr. Cox heard of the regret which is felt at Dr. Hennessy's decision not to stand at the forthcoming general election for re-election to the Dail. This regret is not confined to members of the medical profession, for prominent members of the Free State Government told the Medical Secretary that Dr. Hennessy had been a most useful member of the Dail and would be greatly missed. The Irish Medical Secretary, however, finds that the strain of attending to the work of the Irish office, with the necessary travelling, combined with the work of the Dail, is too much for him.

Association Notices.

TABLE OF DATES.

May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M. Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh). *A.R.M.* (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

DORSET AND WEST HANTS BRANCH.—The annual meeting of the Dorset and West Hants Branch will be held at the Haven Hotel, Sandbanks, Poole, on Wednesday, May 18th, at 3 p.m. Agenda: To confirm appointment of officers for 1927, elected at October, 1926, meeting (*President*, Dr. Grey-Edwards; *Vice-Presidents*, Dr. Morse and Dr. Oliphant; *Honorary Secretary*, Dr. McCall); communications; reports from Branch and from Bournemouth and West Dorset Divisions; time and place of next meeting; the President will read a paper entitled "Medical incidents in the days of Smollett." The Poole members invite the visiting members to lunch at 1.30 at the Haven Hotel. Dr. Grey-Edwards invites members to tea after the meeting. Those intending to be present at lunch should intimate their intention not later than May 15th.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORKSHIRE DIVISION.—The annual general meeting of the East Yorkshire Division will be held at Bridlington on Friday, May 27th. Programme: 3 p.m.—The members will meet at the Priory Church and will be conducted over it by Canon Topham, after which the curator, Mr. Charlesworth, will show the party over the Bayle Gate and the museum. 4.15 p.m.—On adjourning to the board room of the Lloyd Hospital the business meeting will be held. Agenda: Annual report of the Executive Committee; financial statement; election of officers, representatives on the Branch Council, and Executive Committee. Tea will be provided by the hospital staff.

GLASGOW AND WEST OF SCOTLAND BRANCH.—The annual meeting of the Glasgow and West of Scotland Branch will be held in the Glasgow Western Infirmary on Tuesday, May 17th, at 3 p.m.; the officer-bearers for the ensuing year will be appointed.

LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.—The annual picnic of the Hyde Division will be held on Thursday, May 19th. Cars will meet at Mottram Moor (Gun Inn) at 11 a.m., and will proceed by "The Snake," Ashopton, and Bamford to "The Rising Sun," Hope, where lunch will be served. In the afternoon the famous mines at Castleton will be visited, returning to "The Rising Sun" for tea. Should the afternoon be wet the dancing hall of "The Rising Sun" has been kindly placed at the disposal of the party. In order to facilitate arrangements members proposing to take part in the picnic are requested to notify Dr. J. Gordon Macqueen, honorary secretary (34, Church Street, Hyde), by May 14th.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The next clinical afternoon arranged by the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., to-day (Friday, May 13th), at 4.15; tea at 4 o'clock. Dr. E. Cautley will demonstrate cases.

METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.—The next clinical meeting of the Hendon Division will be held in Hendon Cottage Hospital on Friday, May 20th, at 8.30 p.m. An address will be given on the recent outbreak of small-pox at Hendon by Dr. T. S. McIntosh, medical officer of health for Hendon Urban District Council.

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—A general meeting of the Kensington Division will be held at the Kensington Palace Mansions Hotel (Merrick Rooms), De Vere Gardens (opposite De Vere Hotel), W.8 (three minutes' walk from High Street Station), to-day (Friday, May 13th), at 8.45 p.m. Agenda: Election of representatives in Representative Body and nomination of officers for Branch Council; an address will be given by Dr. Julius Burnford, entitled "Types of pyrexia: a clinical study."

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.—The annual meeting of the Lewisham Division will be held at the Town Hall, Catford, S.E.6, on Tuesday, May 17th, at 8.45 p.m. Dr. Robert Knox will read a paper on "The value of x rays in diagnosis," and give a lantern demonstration.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.—The annual general meeting of the Marylebone Division will be held at 11, Chandos Street, W.1, to-day (Friday, May 13th), at 8 p.m.; the Annual Report of Council will be considered. A discussion on pathologists and pathological institutes will be opened by Dr. C. O. Hawthorne; Mr. W. G. Spencer, O.B.E., M.S., will open a discussion on the Dogs Bill, and Dr. E. Graham Little, M.P., will deal with the Landlord and Tenants Bill, with special reference to professional premises. Members are invited to attend in large numbers to take part in these discussions. The election of officers of the Division and nominations for representatives, deputy representatives, officers and members of the Branch Council will also take place.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The annual general meeting of the South-West Essex Division will be held in the Wesleyan Schoolrooms, High Road, Leyton, on Tuesday, May 31st, at 3.30 p.m. Mr. A. J. Couzens will read a paper on personal experience of abdominal disease, mainly from the diagnostic standpoint.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—The annual meeting of the Willesden Division will be held at St. Andrew's Church Hall on Wednesday, May 18th, at 9 p.m. Agenda: Correspondence and annual report; election of officers, representative on Branch Council, and Executive Committee. Dr. G. C. Anderson, the Deputy Medical Secretary, will be present and will speak on the year's work.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, May 27th, at 8 p.m. Mr. A. M. Connell, professor of surgery in the University of Sheffield, will give an address on "Some of the injuries frequently met with in coal mining and their treatment by the general practitioner."

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, May 18th, at 8.15 p.m. Dr. George Hall will give an address on "Encephalitis lethargica and its sequelae." All members of the Division are invited.

SHROPSHIRE AND MID-WALES BRANCH.—The fifty-second spring meeting of the Shropshire and Mid-Wales Branch will be held at the Royal Salop Infirmary on Tuesday, May 17th, at 3.30 p.m. Agenda: Election of President for 1927-28 (to take office in October); treasurer's financial statement; Annual Report of Council; arrangements for annual dinner. Tea will be provided by kind invitation of the President.

SOUTH MIDLAND BRANCH: BEDFORDSHIRE DIVISION.—A general meeting of the Bedfordshire Division will be held at the Bedford County Hospital to-day (Friday, May 13th), at 3 p.m. Agenda: Elect representative and deputy representative; medical charities; communication from head master of Luton Modern School re fees for medical examination of scholars; financing of the Medical Advisory Committee of the British Empire Cancer Campaign; Annual Report of Council (SUPPLEMENT to BRITISH MEDICAL JOURNAL for April 23rd). Tea will be provided.

SOUTH-WESTERN BRANCH.—A spring intermediate meeting of the South-Western Branch will be held at Webb's Hotel, Liskeard, on Wednesday, May 18th, at 2.30 p.m. Agenda:—Papers by Dr. A. B. Solteau: Treatment of primary anaemia; Dr. Wood (Penzance): Some experiments of a general practitioner; Dr. Eric Wordley: Treatment of septicaemia; Dr. F. G. Bushnell: Treatment of migraine and allied disorders; Surgeon-Commander A. B. Clark: Notes on a case of chicken-pox contracted from herpes. Tea will be provided.

SURREY BRANCH: GUILDFORD DIVISION.—At a combined meeting of the Guildford Division and the Veterinary Medical Association, Southern Counties Branch, to be held on May 19th, Professor Hobday will open a discussion on clean milk.

SUSSEX BRANCH: BRIGHTON DIVISION.—The next clinical meeting of the Brighton Division will be held at the Sussex Eye Hospital, on Wednesday, May 18th, at 3.45 p.m.

YORKSHIRE BRANCH: SHEFFIELD DIVISION.—The annual meeting of the Sheffield Division will be held at the Church House, St. James Street, Sheffield, to-day (Friday, May 13th), at 8.30 p.m. Agenda: Annual report of Executive Committee; election of chairman for ensuing year; vote of thanks to retiring chairman; election of other officers.

Correspondence.

State and Municipal Health Services.

SIR,—Although in no way wishing to enter upon a controversy which in my opinion would serve no useful purpose, I feel it my duty to reply to the letter of Dr. Murray Barrow which appeared in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL for April 23rd, (p. 163). I think it would have been a good thing if your correspondent had verified his data before rushing into print. For instance, my staff, including the new assistant medical officer, comprises only two doctors, and not three. It is quite true that two additional health visitors have been appointed, but as the total health visiting staff, including these appointments, is only seven, I do not think that this can be considered lavish, in view of the fact that their work covers an area of 263,120 acres, with a population of 87,460. A large portion of this area is fenland, and communication between villages and towns is in many cases only by road, which means that health visitors have to cycle very long distances. I think, in fairness to the public services, Dr. Barrow should have informed you, Sir, that the announcement which was made in the local press with reference to the activities of the health department was also communicated by circular letter to every doctor in the county.

In spite, however, of Dr. Barrow's apparent antipathy to the public health services in the county, I can assure him that the assistance of my department will always be readily available to him should he require it.—I am, etc.,

H. C. JENNINGS,
County Medical Officer.

Boston, Lincs, May 3rd.

VACANCIES.

BIRMINGHAM: CHILDREN'S HOSPITAL.—(1) House-Physician. (2) House-Surgeon. (3) Casualty House-Surgeon. Salary at the rate of £100 per annum each.

CURRENT NOTES.

Edinburgh Annual Meeting: Hotel Accommodation.

The Hotels and Lodgings Committee has practically completed its arrangements for coping with the large numbers who are expected to visit Edinburgh in July. In order to secure the accommodation which is believed to be necessary, the Committee has definitely engaged all the available rooms in the city, and will allocate these to applicants in rotation. The Scottish Medical Secretary (Dr. Drever) has undertaken to do this work for the Committee, and applications for rooms should be sent to him at 6, Drumsheugh Gardens. A form for the purpose has been prepared for the convenience of members and is printed in the advertisement pages this week (p. 28); it will be repeated in subsequent issues. The accommodation is grouped in three classes—namely:

1. Hotels, whose tariff for bed and breakfast ranges between 8s. 6d. and 14s. The number who can be accommodated in these is comparatively limited.

2. Private hotels and boarding houses, at prices from 5s. 6d. to 8s. 6d. for bed and breakfast. Of these there is a large number, all of them comfortable.

3. Hostels where the tariff is 8s. for bed and breakfast. Not many of these are available, but those that are can be recommended.

It will facilitate other arrangements if members who intend to be present at the Annual Meeting will notify their intention whether they have already secured rooms or not. Early application for rooms is earnestly desired.

The Association and Mental Treatment.

On May 3rd the Psycho-Analysis Committee, having cleared the ground at a preliminary meeting, appointed Dr. R. Langdon-Down chairman and Dr. C. Worster-Drought deputy-chairman, and sketched out the lines on which it proposes to deal with its reference. The Committee began by recording its high appreciation of the services of its honorary secretary, Dr. R. G. Gordon, in preparing a memorandum on the methods of psycho-therapy, consideration of which will be continued at its next meeting. It has invited representative members of the several chief schools of thought to submit their views on the theory and practice of psycho-analysis.

The Lunacy Law Committee met on May 6th, and continued the work of formulating practical recommendations for submission to the Council and the Representative Body. It is hoped to complete the report before the June meeting of the Council, but should this prove impossible the essential recommendations will be embodied in an interim report.

Some Committee Work at Headquarters.

On May 11th the Ophthalmic Committee of the Association held a joint meeting with representatives of the Insurance Acts Committee to discuss the unsatisfactory state of ophthalmic benefit, which is an additional benefit under the National Health Insurance Acts. Definite proposals will be formulated at the next meeting. On the same day the Puerperal Morbidity and Mortality Subcommittee continued consideration of its report. The information before it included extracts from a report of particular interest on maternal morbidity and mortality in Victoria, drawn up by Professor R. Marshall Allen, director of obstetrical research in the University of Melbourne. The Charities Committee and the Public Health Committee met on May 13th. The Charities Committee, besides discussing the apportionment to the various medical charities of the money at its disposal, considered the proposal of the Representative Body for enlarging the personnel of the committee and including territorial representation. Recommendations to meet the views of the Representative Body on this point will be submitted to the Council at its June meeting, and will come before the Representative Body in due course. The Public Health Committee nominated Drs. Dearden, Eustace Hill, and Bone to a special subcommittee to consider the question of introducing a proper medical and sanitation service into the mines. On May 12th the Deputy Medical Secretary addressed a meeting of the Wakefield, Pontefract, and Castleford Division on the work of the Association during the past year. The address was given after supper, and appeared to be much appreciated by the members present, about twenty-five in number.

Sir Charles Hastings Clinical Prize.

The Council of the Association has decided that the Sir Charles Hastings Clinical Prize be again open for competition in 1928. The following are the regulations governing the award of the prize:

Regulations.

1. The prize is established by the Council of the British Medical Association for the promotion of systematic observation, research, and record in general practice; it includes a money award of the value of fifty guineas.

2. Any member of the Association who is engaged in general practice is eligible to compete for the prize.

3. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made.

4. Essays, or whatever form the candidate desires his work to take, must be sent to the British Medical Association House, London, W.C.1, not later than December 31st, 1927, and the prize will be awarded at the Annual General Meeting of the Association to be held at Cardiff in July, 1928.

5. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work.

6. If any question arises in reference to the eligibility of the candidate or the admissibility of his essay, the decision of the Council on any such point shall be final.

7. Each essay must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto, and enclosing the candidate's name and address.

8. The writer of the essay to whom the prize is awarded may, on the initiative of the Science Committee, be requested to prepare a paper on the subject of his essay for publication in the BRITISH MEDICAL JOURNAL or for presentation to the appropriate Section of the Annual Meeting of the Association.

9. Inquiries relative to the prize should be addressed to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

The Katherine Bishop Harman Prize.

In April, 1926, Mrs. Katherine Bishop Harman, M.B., B.S.Lond., presented to the Association the sum of £1,000 for the establishment of a prize to be awarded by the Council for the encouragement of research into the disorders incident to maternity. The following are the regulations governing the award of the prize:

1. The purpose of the prize is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and childbearing. Its money value shall be the net annual income of the capital fund as this has accumulated during a period of two years. The first award shall be made in 1928, and essays must be forwarded to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, W.C.1, not later than December 31st, 1927.

2. As a general rule the prize will be awarded for the essay which, in an open competition, is judged by the Council to be most helpful to the end for which the prize is established, and the Council may at its discretion either prescribe a special or limited subject for the competition or may leave to the competitors an individual selection of the work they wish to present, provided that this falls within the purpose of the prize. In every instance the award made by the Council shall be final.

3. Any medical practitioner registered in the British Empire is eligible to compete for the prize.

4. Should the Council on any of the selected dates decide that no justification for the award of the prize exists, the prize shall be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine.

5. Each essay must be typewritten or printed in the English language, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address.

The Council has decided that no specific subject shall be prescribed for the Katherine Bishop Harman Prize Competition, 1928, but that competitors be left free to choose the work they wish to present, provided that this falls within the regulations governing the prize.

SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

SCHOLARSHIPS.

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships, as follows:

> A Scholarship, known as the ERNEST HART MEMORIAL SCHOLARSHIP, of the annual value of not more than £200, and three other RESEARCH SCHOLARSHIPS, each of the annual value of not more than £150, for (research in any subject (including State Medicine) relating to the Causation, Prevention, or Treatment of Disease.

Each Scholarship is tenable for one year, commencing on October 1st, 1927. A Scholar may be reappointed for not more than two additional terms. *A Scholar may hold a junior appointment at a University, Medical School, or Hospital* provided the duties of such appointment do not interfere with his work as a Scholar.

The conditions of the award of Scholarships are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

GRANTS.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the Causation, Treatment, or Prevention of Disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

The conditions of the award of Grants are stated in the Regulations, a copy of which will be supplied on application to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, London, W.C.1.

Applications.

Applications for Scholarships and Grants for the year 1927-28 *must be made not later than Saturday, June 4th, 1927*, on the prescribed form, a copy of which will be supplied by the Medical Secretary on application. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated to whom reference may be made.

March 5th, 1927. ALFRED COX, *Medical Secretary.*

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

Consultants under the Puerperal Fever and Puerperal Pyrexia Regulations.

By BATH: That it is desirable, owing to the fact that puerperal pyrexia may be due to causes other than obstetric, that the panel of consultants to be instituted under the Regulations should include all competent physicians, surgeons, and pathologists, in addition to consulting obstetricians; further, that some standard of competence should be adopted, such as membership of the staff of a local general or obstetric hospital, or the possession of special qualifications or experience.

Scheme for Formation of Groups in the Association.

By HARROGATE: That the following be substituted for para. 4 of Appendix III to the Annual Report of Council:

> 4. Subject to the approval of Council the Executive Committee of the Group shall define the qualification for membership of the Group.

By HARROGATE: That para. 5 of Appendix III to the Annual Report of Council be amended by the insertion, after the word "Association" in the second line, of the following words:

> "or, if found inconvenient, at such other time as the Executive Committee of the Group may think desirable."

Instruction of Newly Qualified Practitioners in Medical Ethics.

By HARROGATE: That (with reference to para. 99 of the Annual Report of Council) the Council be instructed to consider any further steps which may be thought necessary for the instruction of newly qualified practitioners in medical ethics.

Association Notices.

BOURNEMOUTH AND SOUTHAMPTON DIVISIONS.

NOTICE is hereby given of the following proposal made by Bournemouth Division:

> That the Municipal Borough of Lymington, and that portion of the Rural District of Lymington containing the Civil Parishes of Milford, Hordle, and Milton be transferred from the Southampton Division of the Southern Branch to the Bournemouth Division of the Dorset and West Hants Branch.

Written notice of the proposal has been given to the Southampton Division and to the Dorset and West Hants and Southern Branches, and the matter will be determined by the Council. Any member affected by the proposed change, *and objecting thereto, is requested to write*, giving the reasons, to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than June 21st, 1927.

TABLE OF DATES.

May 28, Sat.	Publication in SUPPLEMENT of results of election of members of Council by grouped Branches, and of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 6, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh). *A.R.M.* (Edinburgh)
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORKSHIRE DIVISION.—The annual general meeting of the East Yorkshire Division will be held at Bridlington on Friday, May 27th. Programme: 3 p.m.—The members will meet at the Priory Church and will be conducted over it by Canon Topham, after which the curator, Mr. Charlesworth, will show the party over the Bayle Gate and the museum. 4.15 p.m.—On adjourning to the board room of the Lloyd Hospital the business meeting will be held. Agenda: Annual report of the Executive Committee; financial statement; election of officers, representatives on the Branch Council, and Executive Committee. Tea will be provided by the hospital staff.

METROPOLITAN COUNTIES BRANCH.—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 21st, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) to sanction the necessary alterations in the rules of the Branch to enable the president-elect to become an *ex-officio* member of all committees; (5) presidential address by Mr. E. B. Turner, F.R.C.S., entitled "Influenza from 1889 to 1927: *its therapeutic and clinical aspects.*"

METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—The annual general meeting of the Kensington Division will be held at 21, Westbourne Terrace, W.2, by kind invitation of Mr. E. B. Turner, on Wednesday, May 25th, at 4.30 p.m. Agenda: Annual Report of the Council; election of officers and Executive Committee for ensuing year; B.M.A. Charities Fund; other business.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.—A clinical evening arranged by the Lewisham Division will take place at St. John's Hospital, Lewisham, on Tuesday, May 31st, at 8.45 p.m.

METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.—The annual general meeting of the North Middlesex Division will be held in the Southgate Council Offices, Palmer's Green, on Wednesday, May 25th, at 3.30 p.m. Agenda: Financial statement for 1926; election of divisional officers; Annual Report of Council (SUPPLEMENT to BRITISH MEDICAL JOURNAL, April 23rd and 30th); instruction of representatives to Annual Representative Meeting.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The annual general meeting of the South-West Essex Division will be held in the Wesleyan Schoolrooms, High Road, Leyton, on Tuesday, May 31st, at 3.30 p.m. Mr. A. J. Couzens will read a paper on personal experience of abdominal disease, mainly from the diagnostic standpoint.

M[illegible]ANCH: ST. PANCRAS DIVISION.—A meeting [illegible] will be held at the British Medical Square, W.C.1, on Tuesday, June 14th, at 9 p.m. Mr. J. Paterson, C.B.E., will read a paper on internal haemorrhage.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, May 27th, at 8 p.m. Mr. A. M. Connell, professor of surgery in the University of Sheffield, will give an address on "Some of the injuries frequently met with in coal mining and their treatment by the general practitioner."

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH: LANCASTER DIVISION.—The annual meeting of the Lancaster Division will be held on Wednesday, May 25th, at 8 p.m., at the Royal Lancaster Infirmary. Business: Election of officers, representatives to the Branch Council, members of Executive Committee and Ethical Committee. The first stage in the Treasurer's Cup golf competition to find the golfer who will represent the Division at Edinburgh on July 22nd, will be held at Dolphinlee (Lancaster Golf Club) on the afternoon of May 25th.

OXFORD AND READING BRANCH: OXFORD DIVISION.—A meeting of the Oxford Division will be held at the Radcliffe Infirmary, Oxford, on Wednesday, May 25th, at 2.45 p.m. Agenda: Clinical cases; Mr. V. E. Negus, F.R.C.S. (King's College Hospital) will read a paper on some common affections of the larynx and their treatment (illustrated).

SURREY BRANCH: GUILDFORD DIVISION.—The annual meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, June 2nd, at 4 p.m.; tea served at 3.45 p.m.

YORKSHIRE BRANCH: ROTHERHAM DIVISION.—A meeting of the Rotherham Division will be held at the Crown Hotel on Friday, May 27th, at 8.30 p.m. Agenda: Report of Executive Committee as to the scale of minimum commencing salaries for public health medical officers, and recommendation of Executive to adopt resolution under Ethical Rules; Annual Report of Council; appointment of representative in Representative Body; annual report of Division for 1926.

Meetings of Branches and Divisions.

NEW SOUTH WALES BRANCH.

A Year's Work.

THE annual report of the council of the New South Wales Branch for the year ending March 31st, 1927, has now been printed and circulated to the members. During the year under review the membership of the Branch increased by 81, the total having risen to 1,593. Ten ordinary meetings, three extraordinary, and seven clinical meetings of the Branch were held, the attendance averaging 48.2. The meeting on December 9th, 1926, took the form of a social evening, to which the new medical graduates of the year were invited. The clinical meetings were held at various hospitals.

The fifteenth annual meeting of delegates of the Affiliated Local Associations of Members with the Branch Council was held on October 1st at the British Medical Association Library, Sydney.

The scientific and literary activities of the Branch, as recorded last year, are now divided among a number of sections for special branches of medical knowledge. The ten existing sections were added to at the close of 1926 by the formation of a section of radiology, *the inaugural meeting being held on December 3rd.*

In referring to the second session of the Australasian Medical Congress (British Medical Association) held at the University of Otago, Dunedin, New Zealand, in February last,[1] a tribute is paid to the great success which attended the organization and management of the Congress, and congratulations are offered to the President, Dr. L. E. Barnett, to the honorary general secretary, Professor W. P. Gowland, and to the Executive Committee. Seventy-three members of the New South Wales Branch took part in the proceedings. The Federal Committee of the British Medical Association, which met in Sydney at the close of August, has been invited by the New South Wales Branch to arrange for the third session of the Congress to be held in Sydney in the spring of 1929.

Reference is made to the continued high standard which the *Medical Journal of Australia* has established for itself; the amount of its reading matter was substantially increased during the period under review. In anticipation of the relinquishment of the Association's premises for the purpose of widening Elizabeth Street, steps were taken to obtain a site for new premises, and 137, Macquarie Street, with a frontage of 30 feet, has already been purchased, though a wider frontage may be necessary.

A portrait of Dr. W. H. Crago has been painted in oils by Mr. John Longstaff, R.A., and will be presented to him by the President during the Annual Meeting. Dr. Crago, it will be remembered, has served with great devotion as honorary treasurer of the Branch for thirty-eight years, and (also in an honorary capacity) has been premises attorney in charge of the Association's building in Sydney since 1910.

During the year six British Medical Association Lectures were delivered at meetings of local associations outside the metropolitan area.

A number of sections of the report deal with medico-political and ethical matters, and with constitutional questions, and it is noted that, in connexion with the visit of the Duke and Duchess of York to New South Wales, the President of the Branch, Dr. R. J. Millard, C.M.G., C.B.E., was invited by the Government to represent the Association at the official landing on March 26th, and at the official reception in the Town Hall, Sydney.

BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

THE annual dinner of the Nuneaton and Tamworth Division was held at the Newdegate Arms Hotel, Nuneaton, on May 11th, when the chairman of the Division, Dr. DUDLEY, presided. The toast of "The British Medical Association," proposed by Dr. RICHARDSON, was responded to by Dr. H. GUY DAIN, President of the Branch. Dr. PARSONS and Mr. A. B. DANBY, F.R.C.S., replied to the toast "Our Guests," which was proposed by the vice-chairman, Dr. ASHWORTH. Dr. E. NASON gave the toast "The Chairman," which was accorded musical honours, and Dr. DUDLEY replied.

At a meeting of the Division held during the evening, Dr. Jones (Tamworth) was elected representative in the Representative Body, and Dr. Grant, Wilnecote, deputy representative.

[1] See BRITISH MEDICAL JOURNAL, March 26th, April 2nd, 9th, 16th, 23rd, 1927.

BOMBAY BRANCH.

THE annual general meeting of the Bombay Branch was held in the Grant Medical College on April 16th.

It was reported that five new members (including two transfers) had been elected by the Branch Council on April 1st.

A letter was read from Dr. Jhirad, secretary of the Bombay Branch of the Association of Medical Women in India, asking for support in promoting a scheme for the registration and supervision of midwives in Bombay. The following were appointed a sub-committee to advise on the matter: Colonel Hamilton, I.M.S. (*chairman*), Dr. Eliza Turner Watts, Dr. Dadabhoy (*secretary*), Dr. N. A. Purendare, Dr. Sandilands, and Dr. Margaret Balfour.

The officers elected for 1927-28 were:

President, Dr. R. Row, O.B.E. *Vice-Presidents*, Colonel F. P. Mackie, O.B.E., I.M.S., and Mr. A. K. Dalal, O.B.E. *Honorary Secretaries and Treasurers*, Dr. F. D. Bana and Dr. B. B. Yodh. *Representative in Representative Body*, Dr. S. P. Kapadia.

The annual report and statement of accounts of the Branch were adopted. The financial statement showed a credit balance in favour of the Branch of Rs.3,359.

A suggestion was made that any funds available should be devoted to the research work on anaemias in Bombay, which was being conducted by Dr. Margaret Balfour and her assistants. Dr. Row said that applications for research grants might be considered by the Branch Council, and that the home Association might be requested to renew their offer of a research grant. The Bombay Branch could only give a little help.

Colonel F. P. MACKIE, I.M.S., gave an address on sprue, with special reference to the investigations in progress at the Haffkine Institute. He discussed the distribution, etiology, diagnosis, and treatment of this disease, and said that a castor oil emulsion with pepsin and dilute hydrochloric acid had proved very successful. He raised the question of there being some connexion between sprue, hill diphtheria, and profound anaemias in Bengal.

Dr. ERULKAR referred to the difficulty of distinguishing sprue from chronic dysentery, abdominal tuberculosis, and chronic malaria.

Dr. MARGARET BALFOUR read a paper on anaemias, with special reference to pregnancy. She had seen 402 patients with pregnancy anaemia in 3,784 cases of labour. This disease was the chief single cause of death in childbirth, and was prevalent throughout India during the last half of the year. The onset was sudden in the middle of pregnancy, with fever and no diarrhoea in some patients, and conversely in others; the pathology and treatment were discussed.

CAMBRIDGE AND HUNTINGDON BRANCH: CAMBRIDGE AND HUNTINGDON DIVISION.

THE annual meeting of the Cambridge and Huntingdon Division was held at Addenbrooke's Hospital, Cambridge, on May 4th. Dr. Collins of Peterborough was elected chairman.

The following officers were elected for the year 1927-28:

Chairman, Dr. C. M. Stevenson. *Honorary Secretary*, Dr. J. C. Hall. *Representative in Representative Body*, Dr. A. C. S. Waters. *Deputy Representative in Representative Body*, Dr. N. Macfadyen.

The annual report for 1926-27 was read and discussed, handed round for inspection, and approved.

Dr. C. M. STEVENSON brought forward the subject of dental anaesthetics under the national health insurance scheme. It was agreed, after discussion, that the secretary should inquire into the matter.

A discussion on club fees was opened by Dr. DUDLEY, in view of the fact that several practitioners had recently been approached by certain societies with a view to reducing the medical fees. The secretary was instructed to call the attention of members to the resolutions adopted by the Isle of Ely Division and the Cambridge and Huntingdon Division that "club fees for adults and juveniles should remain as they stand at present."

Dr. DUDLEY brought up a matter relating to ophthalmic benefit.

The SECRETARY read correspondence *re* Dogs' Protection Bill and salaries of medical officers of health.

The meeting closed with the usual votes of thanks.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.

THE annual meeting of the Bournemouth Division was held on May 4th in St. Peter's Small Hall, Bournemouth. Before the meeting, the chairman, Dr. Edwards, kindly entertained the members to tea.

The following officers for 1927-28 were elected:

Chairman, Dr. How White (West Knoll). *Vice-Chairman*, Dr. Asten. *Honorary Secretary and Treasurer*, Dr. O. C. Carter. *Representatives in Representative Body*, Dr. Morse and Dr. Johnson Smyth. *Deputy Representatives*, Dr. Mahomed and Dr. Hutton.

The following resolution was unanimously adopted for consideration at the Annual Representative Meeting:

> That the existing representation, power, and procedure of the General Medical Council need careful revision in order that they may comply more precisely with the changed conditions of medical practice, and that this be remitted to the Council for consideration and report.

The policy of the Division towards the Dogs' Protection Bill was considered. Several members spoke, all of whom condemned the bill; the honorary secretary was instructed to write to the members of Parliament within the Division area asking them to vote against the bill at the second reading.

The question of the Division boundary was discussed, and it was suggested that the boundary line of the Bournemouth Division should run from Lymington to Ringwood.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

A MEETING of the West Dorset Division was held at Durlston Court Preparatory School, Swanage, on April 29th.

A report and recommendation of the Executive Committee acting as the Ethical Committee was discussed at length and a resolution passed.

Dr. W. A. REES read some interesting notes on cases, and showed specimens. The Red Cross Children's Hospital was subsequently inspected and cases were demonstrated. By invitation of the Swanage and district members tea was provided at the Trocadero Restaurant.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.

AT a recent very successful clinical meeting of the East York Division a pleasant interlude was provided when Dr. EDWARD TURTON, on the occasion of his retiring from the post of senior physician to the Hull Royal Infirmary, presented the Division with a golf cup for annual competition. For over twenty years Dr. Turton has been an outstanding figure in the Division and has held every office, including that of secretary and representative for many years. In presenting the cup, Dr. Turton, in a delightfully humorous speech, said he hoped the annual competition would have the effect of encouraging the social side of the Division's activities. He wished the cup to be called the "Ritchie Rodger Cup," after the present chairman of the Division and in token of gratitude for the kindness shown him in his recent illness. Dr. RITCHIE RODGER, in accepting the cup, expressed the thanks of the Division and also his personal appreciation of the kindly thought of perpetuating his own name with Dr. Turton's in this pleasant manner.

EDINBURGH BRANCH: SOUTH-EASTERN COUNTIES DIVISION.

THE annual meeting of the South-Eastern Counties Division was held in the Railway Hotel, Newtown St. Boswells, on May 9th.

Dr. J. WILFRED GEORGESON (Lauder), in vacating the chair to Dr. N. P. Fairfax (Innerleithen), spoke of the great help he had received from members of the Division. Dr. FAIRFAX, in succeeding to the chair, referred in the most appreciative way to the services rendered by Dr. Georgeson during his term of office.

Dr. Oliver was elected vice-chairman. Dr. John S. Muir was re-elected representative in the Representative Body, with Dr. S. Davidson as deputy; Dr. A. A. McWhan was re-elected honorary secretary.

The annual report and financial statement for the year 1926 was approved.

The nomination of Dr. Fairfax as a candidate for the Scottish Committee was approved.

On the motion of Dr. FAIRFAX it was unanimously agreed to place the following amendment before the Annual Representative Meeting, 1927:

> That in view of the fact that an assistantship is commonly to a young practitioner a continuation of his medical education and training, the value of which is variable and impossible to estimate, no definite figure can in these circumstances be fixed as a minimum salary, but in cases where the above consideration does not prevail and where the practices can afford it, the minimum commencing salary for a whole-time indoor assistant to a practitioner should be £210 per annum, etc. (as in paragraph *d*).

The SECRETARY reported having had considerable difficulty in arranging for the annual dinner. It was ultimately agreed that it should be held in the autumn, and the arrangements left in the hands of the chairman. The question of holding a reception to which members of the Division could be invited was remitted to a committee.

At the conclusion of the meeting Dr. Fairfax invited the members to tea, for which he was cordially thanked.

KENYA BRANCH.

THE annual meeting of the Kenya Branch was held at Nairobi on January 15th, when the President, Dr. M. MACKINNON, was in the chair.

The SECRETARY'S report on the work of the Branch showed that during 1926 twelve meetings had been held, of which three had been devoted to the discussion of medico-political matters, and that the Council had met on six occasions. The financial statement showed a credit balance. The report was adopted unanimously.

The following officers were elected for the year:

President, Dr. J. B. Clarke. *President-Elect*, Dr. A. J. Jex-Blake. *Vice-President*, Dr. G. V. Anderson. *Honorary Secretary*, Dr. W. H. Kauntze. *Assistant Secretary*, Dr. J. A. Carman. *Representative in Representative Body*, Dr. M. Mackinnon. *Deputy Representative in Representative Body*, Dr. G. V. Allen.

Dr. J. B. CLARKE, having succeeded to the chair, proposed a hearty vote of thanks to Dr. Mackinnon for his work as President for the year; this was carried unanimously.

The question of the formation of a local medical defence union was discussed and its further consideration postponed.

The offer of the use of the Municipal Council Chamber for the monthly meetings of the Branch was accepted with thanks.

Dr. A. J. JEX-BLAKE read a paper on infant feeding. An interesting discussion followed, during which many questions were put forward which were subsequently answered by Dr. Jex-Blake, to whom a hearty vote of thanks was accorded for his valuable paper.

A further meeting of the Branch was held on February 9th in the Municipal Council Chamber, when the President, Dr. J. B. CLARKE, was in the chair.

Dr. Kelly and Mr. Symes were, on the motion of Dr. ALLEN, seconded by Dr. ANDERSON, elected honorary members of the Branch.

Dr. HENDERSON read a paper on "Certain aspects of growth and nutrition." In the course of the subsequent discussion several questions were asked, to which Dr. Henderson replied. On the motion of the CHAIRMAN a vote of thanks was accorded to Dr. Henderson for his interesting paper.

At the meeting of the Branch held at Nairobi on March 9th Dr. MACKINNON read a paper on the response of the pulse to exercises, which was followed by an interesting discussion. Dr. Mackinnon was thanked for his contribution.

Dr. Henderson was appointed auditor of the Branch, and it was decided that the local subscription for Nairobi members should be reduced to five shillings a member.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

A MEETING of the South-West Essex Division was held at the Claybury Mental Hospital, Woodford Bridge, on May 3rd. Letters from Mr. Cassels, Sir Hamar Greenwood, and Mr. Churchill concerning the Dogs' Protection Bill were read. It was announced that Dr. Marsh had won the Divisional round of the Treasurer's Cup golf competition, and the secretary was instructed to convey the thanks of the Division to Drs. Norman and MacGregor for kindly arranging the competition. Resolutions in connexion with the puerperal pyrexia scheme passed by the Metropolitan Counties Branch Council on February 8th were brought to the notice of the Division. Dr. Panting was unanimously re-elected representative in the Representative Body, and Dr. Marsh elected deputy representative. Dr. BARHAM, medical superintendent, showed members round the hospital, and demonstrated an interesting series of cases. These included, *inter alia*, a series of general paralysis of the insane, some of which showed good remissions following inoculation with malaria, a case of Huntington's chorea, an interesting adolescence hysteria with contractures and marked wasting of the arms, and a patient with psychasthenia who explained his own symptoms with uncanny lucidity. The meeting concluded with a hearty vote of thanks to Dr. Barham.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.

A MEETING of the Blyth Division was held in the house of Dr. Hudson (Bedlington) on May 4th. General business was discussed. The members agreed to take a strict stand regarding the question of "covering," and no longer to work with unqualified women at confinement cases. Some discussion regarding "miners' arrears of contributions" took place, and the action taken by one member was approved and supported. The Annual Report of Council was discussed, but no recommendations were made. The contributory scheme for hospital benefit was put before the local hospital secretary. The secretary was instructed to try to arrange a meeting with members of the Morpeth Division for the purpose of organizing a public medical service along the lines under discussion at a previous meeting. Mrs. Hudson served coffee, and after a vote of thanks, Dr. T. Craig invited the members to meet at his house.

NORTHERN COUNTIES OF SCOTLAND BRANCH: BANFF, MORAY, AND NAIRN DIVISION.

THE annual meeting of the Banff, Moray, and Nairn Division was held at the Commercial Hotel, Keith, on May 7th. Prior to the meeting the members present lunched together. Dr. DOUGLAS read a letter from the Provost of Keith, offering the Division a welcome to the town on the first occasion of a meeting held there. The secretary was instructed to tender the thanks of the Division to the Provost for his kind thought.

The secretary and treasurer's annual report and statement was read and approved. The report showed that the Division was in a flourishing condition, and that more interest was being taken in the work of the Association. In moving the election of Dr. James Taylor (Keith) as chairman, Dr. DOUGLAS referred to the many services he had rendered to the community, in his professional capacity and also in a civic role. The appointment was unanimously agreed to, and in returning thanks for his election Dr. TAYLOR said that he would do all in his power to promote the well-being of the Division. He proposed a hearty vote of thanks to his predecessor for his conduct in the chair during the past year.

The other officers were elected as follows:

Vice-Chairman, Dr. D. Grant (Hopeman). *Secretary*, Dr. G. S. Sowden (Elgin). *Representative in Representative Body*, Dr. P. McDiarmid (Fochabers). *Deputy Representative*, Dr. A. B. Murray (Banff).

The Annual Report of Council was considered, and several items were remitted to the Executive Committee for further report. Dr. ALEXANDER raised the question of the fees allowed by certain Government departments for work done in the voluntary hospitals in the area. After considerable discussion, which revealed a diversity of standards at the different hospitals, the secretary was instructed to collect the necessary information and lay it before the next meeting of the Executive Committee, with a view to having a uniform standing throughout the Division.

After the business of the meeting the members adjourned to the golf course, where, after a round, they were entertained to tea by the lady members. This attention was much appreciated.

PUNJAB BRANCH.

A WELL attended meeting of the Punjab Branch was held in the Patiala Block of the King Edward Medical College, Lahore, on April 6th. Dr. NIHAL CHAND SIKRI opened a discussion on syphilis and emphasized the fact that syphilis was on the increase, especially amongst the lower middle classes, and also amongst the students. He stated that he preferred some of the bismuth preparations to the arsenical ones in treatment. A brisk discussion followed, and in view of the importance of prevention of further spread of the disease it was decided to discuss this subject at a subsequent meeting to be held on May 4th.

SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A VERY successful session of the Portsmouth Division was brought to a close by the annual dinner held at the Queen's Hotel, Southsea, on May 11th, when Dr. A. MEARNS FRASER was in the chair. The total number attending was 112, and amongst the guests were the Mayor (Councillor Frank J. Privett); Sir StClair Thomson; Sir Thomas Bramsdon, city coroner; the Archdeacon of Portsmouth, the Venerable Neville Lovett; Major-General Sir Guise Moores, President of the Southern Branch; Mr. F. J. Sharks, town clerk; and Mr. Philip Blake, President of the Portsmouth Dental Society.

Address by Sir StClair Thomson.

After the toast of the King, and that of the guests, which was wittily proposed by Dr. R. LYTLE, and responded to by the MAYOR and Sir THOMAS BRAMSDON, had been honoured, Sir STCLAIR THOMSON delivered a most interesting address entitled "A London physician in the eighteenth century," the subject of which was John Coakley Lettsom (1744-1815), founder of the London Medical Society. The address was charmingly delivered in that delightful style which one associates with Sir StClair Thomson, who, at its conclusion, on the proposal of Mr. C. A. SCOTT RIDOUT, was enthusiastically toasted by the guests.

A pleasing feature of the evening was a surprise presentation, made on behalf of the members by Dr. PHILIP GREEN, to the chairman, Dr. Mearns Fraser, and to the honorary secretary, Dr. H. H. Warren. This presentation, which took the shape of a silver coffee set to the former, and a silver cigar box to the latter, both suitably inscribed, was made as an expression of the appreciation of the members of the services of these two gentlemen towards making the last two years the most successful in the history of the Division.

SOUTHERN BRANCH: WINCHESTER DIVISION.

A MEETING of the Winchester Division was held by the kind invitation of Dr. Bartlett at his house at Romsey on May 12th. Dr. Livingston was elected divisional representative in the Representative Body and the honorary secretary deputy representative. A "binding" resolution under Rule 2A of the divisional ethical rules in connexion with the scale of minimum commencing salaries for public health medical officers was unanimously adopted.

A discussion on the association of cases of herpes zoster and varicella was opened by Dr. BARTLETT, who gave notes of many instances of the sequence of herpes and varicella, varicella-herpes, herpes-varicella-herpes, and other combinations—the apparent sequence of varicella-herpes being the form least often met with.

A most interesting discussion followed and many other illustrative cases were brought forward. It was generally agreed that the apparent association of these cases was well worthy of expert scientific investigation.

The company was subsequently entertained to tea by Dr. and Mrs. Bartlett, who at the conclusion of the meeting were cordially thanked for their kind hospitality.

SOUTH-EASTERN OF IRELAND BRANCH.

THE annual meeting of the South-Eastern of Ireland Branch was held in the Club House Hotel, Kilkenny, on May 4th. Dr. MYLES (Clonmel) was installed in the chair as President. Dr. Cox, Medical Secretary, British Medical Association, Dr. T. Hennessy, Irish Medical Secretary, and twenty members attended. Three non-members were also present, one of whom joined after the meeting. A vote of thanks was passed to Dr. Barry, out-going President, for the manner in which he conducted the business during the year. The following officers were elected for the year 1927-28:

President-Elect, Dr. J. Mitchell (Kilkenny). *Honorary Treasurer*, Dr. Jellett. *Honorary Secretary*, Dr. P. Gr[illegible] *rish Committee*, Dr. P. Stephenson. *Representc Body*, Dr. W. Phelan. *Deputy Representative in* Cassin.

The Annual Report of Council was approved and adopted. Dr. COX and Dr. HENNESSY both addressed the meeting and dealt with various matters, particularly organization and the Medical Benevolent Fund. An interesting discussion followed, in which the majority of those present took part. A cordial vote of thanks to Dr. Cox and Dr. Hennessy was passed with acclamation, and both were entertained to dinner after the meeting.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: SOUTH-WEST WALES DIVISION.

A VERY successful meeting of the South-West Wales Division was held at the Carmarthenshire Infirmary, Carmarthen, on May 11th. Owing to the unavoidable absence of Sir John Lynn-Thomas, chairman of the Division, Dr. C. A. BRIGSTOCKE presided.

Mr. J. HOWELL EVANS, F.R.C.S. (*London*), gave a most interesting, lucid, and instructive address on cystic swellings of the scrotum, which was particularly well illustrated by lantern slides. At the close of the lecture a hearty vote of thanks was accorded to the lecturer. After the meeting tea was served.

SUFFOLK BRANCH.

A MEETING of the Suffolk Branch was held at the Crown and Anchor Hotel, Ipswich, on May 6th. There were present twenty-five members, Professor FRANCIS R. FRASER of St. Bartholomew's Hospital read a most interesting and instructive paper on the therapeutic action of digitalis. The lecture was illustrated by lantern slides of tracings taken from actual cases. A discussion ensued and many questions were asked. The President-Elect, Dr. BROWN, and Dr. ADDEY moved and seconded a very hearty vote of thanks to Professor Fraser for travelling to Ipswich to give such an excellent paper. Tea was served to members and their wives at the kind invitation of Dr. Rix (the President) and Mrs. Rix.

SURREY BRANCH: CROYDON DIVISION.

THE annual meeting of the Croydon Division was held at the Croydon General Hospital on May 4th, when Mr. E. M. COWELL, D.S.O., F.R.C.S., was in the chair.

The report of the Executive Committee was received and adopted. It showed that there had been an increase in the membership and that thirteen meetings had been held, with an average attendance of twenty-nine. Reference was made to the good feeling which existed between the medical officers of health and the local practitioners. The following officers were elected for the ensuing year (the direct representative and deputy representative had been elected at a previous meeting):

Chairman, Dr. R. L. Pinkerton. *Vice-Chairman*, Mr. E. M. Cowell, D.S.O. (who was given a very hearty vote of thanks for his services as chairman during the past year). *Honorary Secretary and Treasurer*, Dr. C. G. C Scudamore. *Assistant Honorary Secretary*, Dr. P. W. Hamond. *Auditor*, Dr. G. G. Genge.

Dr. A P. Allan was nominated as one of the vice-presidents of the Surrey Branch for 1927-28.

The business meeting was followed by a clinical meeting, when cases of interest and specimens were shown by Mr. COWELL and Drs. BRAYNE-NICHOLLS and SOUTHGATE.

SUSSEX BRANCH. CHICHESTER AND WORTHING DIVISION.

THE annual meeting of the Chichester and Worthing Division was held at the Dolphin Hotel, Chichester, on May 4th. The following office-bearers were elected:

Chairman, Dr. F. Hinds. *Vice-Chairman*, Dr. H. J. M. Milbank-Smith. *Honorary Secretary*, Dr. D. D. Mackintosh.

The members of the Chichester and Worthing and Horsham Divisions subsequently dined together at the Dolphin Hotel. After dinner a paper by Dr. Bostock on the operative treatment of fractures was read in his absence, through illness, by Dr. LIESCHING. A most interesting series of cases was described and *x*-ray prints shown of the conditions both before and after operation. In the discussion which followed several members took part. Thereafter Dr. GARRATT explained the working of the contributory fund for hospitals scheme so far as concerned the Royal West Sussex Hospital in Chichester. The HONORARY SECRETARY brought forward the recommendation of the Executive Committee that a hospitality fund should be instituted for the entertainment of the members of the Sussex Branch at the forthcoming annual meeting. A subscription list was formed and the members present intimated individual subscriptions to the fund.

SUSSEX BRANCH: CHICHESTER AND WORTHING AND HORSHAM DIVISIONS.

A COMBINED meeting of the Chichester and Worthing and Horsham Divisions was held at the Dolphin Hotel, Chichester, on May 4th, when Dr. VERNON was in the chair.

Dr. H. J. M. Milbank-Smith was appointed representative in the Representative Body, and Dr. D. D. Mackintosh deputy representative.

In considering the Annual Report of Council, Dr. MILBANK-SMITH drew attention to the arrangements made for members getting books out of the Library. Special attention was drawn to paragraph 168B, that "the primary object of out-patient departments of hospitals should be for consultation." In considering the attitude of the British Medical Association on the recent Harnett *v.* Fisher case, the following resolution was carried unanimously:

> That this meeting would like information on the absence of editorial comment in the BRITISH MEDICAL JOURNAL on the findings of the Harnett *v.* Fisher case.

WILTSHIRE BRANCH: TROWBRIDGE DIVISION.

THE annual general meeting of the Trowbridge Division was held at Trowbridge on April 13th, when Dr. ADYE was in the chair. The annual report was presented.

The following officers were elected for the year 1927:

Chairman, Dr. L. Crossley. *Vice-Chairman*, Dr. D. L. Spence. *Honorary Secretary and Treasurer*, Dr. A. D. Hamilton.

A letter from the clerk to the Somerset Panel Committee *re* appointment of a consultant under the Puerperal Fever, etc., Regulations, was read and discussed. The meeting felt that there might be some difficulty, especially financially, in obtaining the services of a consultant from Bristol, and recommended that if such an appointment were made a man from Bath should be appointed.

Letter D.11 from headquarters, *re* medical charities, was read and discussed, and the honorary secretary was appointed as charities secretary.

The meeting considered that an appeal should be made to every medical practitioner in the Division to subscribe, and that no special charities dinner or dance was likely to be successful.

A form of ante-natal record issued by the Central Midwives Board for the use of midwives was presented by Dr. Tangye. The honorary secretary was instructed to forward to headquarters a protest against the form, as being not only useless but dangerous.

National Insurance.

LONDON INSURANCE COMMITTEE.

A MEETING of the London Insurance Committee was held, under the chairmanship of Mr. DAVID DAVIS, on April 28th.

Insured Persons in the Services.—The committee considered a resolution of the National Association of Insurance Committees to which its attention was invited by that body, calling for such modifications of the Navy, Army, and Air Force regulations as would secure that the administration of all additional treatment benefits of members of the Navy, Army, and Air Force Insurance Fund should be administered by and through Insurance Committees. The Ministry of Health, to which a copy of the resolution was also forwarded, had replied that the administration of treatment benefits for the limited class of persons represented by members of the Fund presented exceptional difficulties which could best be dealt with centrally. The Ministry also stated that experience of the existing arrangement under which claims for cash benefits were submitted, in the first instance, to Insurance Committees had not indicated that the system possessed such advantages as would justify its extension to treatment benefits. On the motion of Mr. ROCKLIFFE the committee unanimously agreed to a resolution stating that it saw no reason to disagree with the views expressed by the Ministry of Health in this matter.

The Cost of Prescriptions.—A statement was presented to the committee giving the number and cost of prescriptions furnished to insured persons in the committee's area as compared with other areas. The average ingredient cost per prescription (the dispensing cost varies scarcely at all in different areas) in London in 1926 was 3.8d.; the cost in the country was very generally higher, ranging up to 5.4d. at Chester and in the county of Norfolk, and 5.6d. at Eastbourne. The average number of prescriptions per insured person in London in 1926 was 4.7, again relatively low; the number in Manchester was 6.2, and in Birmingham 5.7. The average cost of prescriptions per insured person in London was 3s. 3d., once more a low figure in comparison, the figure in Manchester being 4s. 8d., and in Oldham and Preston 4s. Mr. ROCKLIFFE raised the question of the considerable increase in the cost of prescriptions; the cost was about 100 per cent. greater than was estimated when national insurance came into operation. This seemed to indicate extravagant and unnecessary prescribing. Dr. H. J. CARDALE suggested that the approved societies should inaugurate a campaign to educate the community in the fatuity of taking these disagreeable concoctions. The doctor could not do it, for if he failed to give his patients a bottle of medicine he forfeited their confidence. The increased cost was partly to be explained by the increased public confidence in the medical service under the Acts, with a growing tendency of insured persons to seek the services of their insurance doctor. Wastefulness was also encouraged by the habit of prescribing "tablespoonfuls." The tablespoon was a variable quantity in different households, and in many was held to mean a soup or gravy spoon. Patients also came with unmarked bottles, sometimes ginger-beer bottles, or even less respectable containers, and the rule was that if a patient provided his own bottle it must be accepted. The ideal thing would be to have bottles marked for proper doses, so that there would be no excuse for the patient taking too much. Mr. T. B. LAYTON agreed with Dr. Cardale to some extent though as he grew older he found himself laying more stress on drugs than formerly. But a campaign on the lay side was not the way to tackle the problem. The lay people followed the medical profession, and were anything from twenty-five to fifty years behind it. Years ago the medical profession was laying as much stress on drugs as the layman did to-day. Moreover, to explain the increased expenditure, a new type of drug had come along, not taken by the mouth, but administered with the syringe. Insulin was unknown when the insurance scheme started, and so were the various antistreptococcal and antipneumococcal preparations, all of which were relatively expensive. The approved societies had to face the fact that, however carefully drugs might be prescribed, the cost in future would continue to increase.

Examination of Chest through Clothing.—One of the cases brought forward by the Medical Service Subcommittee was on the complaint of an insured person who alleged inadequate examination and treatment against a practitioner. The complainant stated that on the first occasion the practitioner placed his ear to the insured person's chest and back outside his clothing, which included a thick overcoat, and on the second occasion placed a stethoscope to his chest, again through his clothing. The practitioner's statement was that he found it quite possible to hear the sounds of a chest through clothing, but that he only did this by way of preliminary examination, and if he found anything suspicious he required the patient to undress. The Medical Service Subcommittee recommended—and the committee accepted the recommendation—that the practitioner had not failed to comply with the terms of service; but Mr. LAYTON raised objection to a statement in the body of the report that "Our medical members (of the Medical Service Subcommittee) advise us . . . that it is possible for a medical practitioner to hear the sound of a patient's chest without removing his clothing, and that such an examination

is often made, as a preliminary, in the case of a patient who is not obviously ill." Dr. Layton said that he did not believe the examination of the chest was ever made properly through the patient's clothing. It was agreed to take back this part of the report for revision.

LOCAL MEDICAL AND PANEL COMMITTEES.

HERTFORDSHIRE.

THE annual meeting of the Herts (Local) Medical and Panel Committee, to which all insurance practitioners in the county are summoned and all other members of the medical profession are invited, will be held at the Abbey Institute, St. Albans, on Wednesday, June 1st, at 3 p.m., when the statutory election of the Panel Committee will take place, and the annual report and financial statement will be presented. Tea will be provided at the Institute about 4.30 p.m., and practitioners are cordially invited to bring ladies. Arrangements will be made for parties to visit the Abbey both during and after the meeting.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders W. G. Edwards and G. C. Cross have been placed on the retired list with the rank of Surgeon Captain.

Surgeon Commanders H. St.C. Colson to the *President* for Royal Naval School, Greenwich; D. P. H. Pearson to the *Victory* for R.N. Barracks, temporary, supernumerary.

Surgeon Lieutenant-commanders G. W. Woodhouse and A. Craig to be Surgeon Commanders.

Surgeon Lieutenant L. P. Spero to the *Victory* for R.N. Hospital, Haslar, temporary, supernumerary.

Messrs. M. L. McCauley and L. A. P. Wiles have entered as Surgeon Lieutenants and have been appointed to R.N. Hospital, Haslar, for course.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant Commander A. G. L. Reade, O.B.E., to the *Ramillies* for twenty-one days' training.

Surgeon Lieutenants G. A. Clark and R. H. O. Robinson to be Surgeon Lieutenant Commanders; B. W. C. Archer to the *Victory* for R.N. Hospital, Haslar, additional, for fourteen days' training.

Surgeon Sublieutenant D. R. W. Burbury to the *Victory* for R.N. Hospital, Haslar, for fourteen days' training.

R. Pedlow has entered as Probationary Surgeon Lieutenant and attached to the Ulster Division.

D. W. Bawtree has entered as Probationary Surgeon Sublieutenant and attached to the London Division.

ROYAL ARMY MEDICAL CORPS.

Major N. T. Whitehead, M.C., is restored to the establishment.

The following Captains to be Majors (the notifications are in substitution for those published in the *London Gazette* of the dates indicated in brackets): J. B. A. Wigmore, July 26th, 1924 (August 8th, 1924); E. A. P. Breck, July 31st, 1926 (August 10th, 1926); G. R. Grant, M.C., August 6th, 1925, and J. La F. Lauder, D.S.O., M.C., August 8th, 1926 (August 20th, 1926); F. G. Flood, M.B., August 20th, 1925 (August 27th, 1926); J. J. Magner, M.C., September 22nd, 1926 (October 5th, 1926); J. McP. Mackinnon, October 3rd, 1926 (October 8th, 1926); H. S. Milne, M.C., October 16th, 1926 (October 26th, 1926); G. F. Carr, M.C., December 11th, 1926 (December 21st, 1926); J. H. Baird, January 2nd, 1927, and F. Harris, M.C., January 10th, 1927 (January 18th, 1927); H. R. Sheppard and D. W. Beamish, M.C., January 21st, 1927 (February 1st, 1927); W. K. Campbell, D.S.O., M.C., February 7th, 1927 (February 15th, 1927); E. M. Townsend, M.C., March 8th, 1927 (March 22nd, 1927); P. J. S. O'Grady, March 19th, 1927 (March 29th, 1927).

The following Captains to be Majors: R. R. Thompson, M.C., W. Russell, M.C., A. J. Hickey, M.C., A. E. Richmond, O.B.E. (prov.), T. Young, J. M. Mackenzie, O.B.E., M.C., R. T. Cox, G. S. Douglas.

Captains J. W. Darling, M.C., and H. M. Hart-Smith to be temporary Captains and temporarily relinquish the rank of Captain.

To be Lieutenants: W. G. S. Foster (on probation) and A. Nicolson.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader R. S. Topham is placed on the retired list at his own request.

Flight Lieutenant L. Game is transferred to the Reserve, Class D2, and is employed with the Regular Air Force for a period of one year.

Flight Lieutenants G. J. Griffiths to R.A.F. British Hospital, Irak; T. W. Wilson to Station Commandant, Hinaidi, Irak; D. B. Smith to R.A.F. Combined Hospital, Irak.

Flying Officer B. L. Edwards to R.A.F. Combined Hospital, Irak.

INDIAN MEDICAL SERVICE.

Colonel G. Tate, Inspector-General of Civil Hospitals, United Provinces, is appointed Surgeon-General with the Government of Bengal.

Colonel C. H. Bensley, C.I.E., K.H.P., has retired from the service.

Lieut.-Colonel J. Husband, an Agency Surgeon, is granted leave on average pay for eight months and on half average pay for one month, under the Fundamental Rules.

Lieut.-Colonel R. F. Baird, Civil Surgeon, Allahabad, is appointed Inspector-General of Civil Hospitals, United Provinces.

Lieut.-Colonel A. N. Dickson, M.C., an Agency Surgeon, is posted as Residency Surgeon, Hyderabad.

Major R. M. Kharegat, an Officiating Agency Surgeon, is posted as Agency Surgeon in Bundelkhand.

Captain J. C. Pyper to be Major.

Lieutenant J. C. Drummond to be Captain.

To be Captains: W. D. B. Read, J. F. Hinksman, and J. L. Donnelly.

To be Lieutenants: P. H. Cummins, J. H. Clapp, W. J. L. Neal, J. J. Beausang, J. F. Bodman, W. J. A. Coldstream, T. D. Donegan, T. A. Malone, and D. P. Lambert.

The services of Captain A. C. Chatterjee are placed temporarily at the disposal of the Government of Bengal.

The services of Captain S. N. Hayes are placed at the disposal of the Government of the Punjab.

REGULAR ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Major A. L. Aymer relinquishes his commission and retains the rank of Major.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Captain R. Ward, M.C., to be Lieutenant-Colonel and to command the 126th Wessex Field Ambulance.

Captain C. D. Walker resigns his commission and retains his rank.

Lieutenant L. N. Jackson, M.C., late R.F.A. Special Reserve, to be Lieutenant.

Second Lieutenant H. V. Morlock, M.C., late Rifle Brigade, to be Lieutenant.

General Hospitals.—Captain J. F. O'Grady, from the General List, to be Captain, with precedence as from January 16th, 1921; Lieutenants P. Mumford and W. H. Gratrix, from the General List, to be Lieutenants, with precedence as from February 26th, 1924, and February 7th, 1925, respectively.

Hygiene Companies.—Captain J. Cohen, from the General List, to be Captain, with precedence as from January 30th, 1926.

TERRITORIAL ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

British Medical Association.

CURRENT NOTES.

The Report on Tests for Drunkenness.

In October, 1925, the Council of the British Medical Association appointed a special committee to report and make recommendations on tests for drunkenness. The committee was fortunate in securing the assistance of a number of persons of special experience and knowledge to take part in its deliberations. The report of the committee was presented to the Council at its meeting on February 9th and published in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of February 19th. It has now been reprinted in pamphlet form, price 2d., including postage. Copies can be obtained through any publisher, or direct from the Financial Secretary and Business Manager, B.M.A. House, Tavistock Square, London, W.C.1.

Harnett v. Fisher.

In the SUPPLEMENT of last week (p. 210) was published a resolution adopted at the meeting of the Chichester and Worthing Division asking for information on the absence of editorial comment in the BRITISH MEDICAL JOURNAL on the findings in the case of Harnett *v.* Fisher. The matter was discussed at the meeting of the Journal Committee on May 19th, when it was pointed out that full reports of the case in its earlier stages had been published in the BRITISH MEDICAL JOURNAL, including the proceedings of the appeal to the House of Lords, reported in the issue of March 12th (p. 496). As the House of Lords reserved judgement the case has been *sub judice*, but it is expected that its decision may be given very shortly.

Some Committee Work at Headquarters.

Four committees and one subcommittee met during the week beginning Monday, May 16th. The Central Ethical Committee approved, with minor amendments, a memorandum by the Deputy Medical Secretary reviewing the existing ethical machinery of the Association and putting forward certain suggestions for its extension. The memorandum will be presented to the Council at its next meeting for submission to the Representative Body. The Committee also adopted for submission to the Council and Representative Body a resolution on the question of advertising in the medical press institutions for special treatment. This matter was considered later by the JOURNAL Committee, which took the same view. The Medico-Political Committee had as usual a very heavy agenda covering a number of widely differing matters. Points of special interest arose in connexion with certificates often demanded by employers in cases under the Workmen's Compensation Acts, the new form of death certificate, and the medico-political aspects of the memorandum referred to above on the existing ethical machinery of the Association. The first point is one which has proved extremely troublesome to practitioners who wish to help their patients in every way possible, but naturally object to supplying employers gratis with certificates which the latter have no statutory right to demand from their employees. The Committee decided to make a thorough examination of the whole question next session. The intention of the new form of death certificate submitted by the Registrar-General for the advice of the Committee is to further, so far as possible in the existing state of the law, the Association's long-standing policy that certificates of the cause of death should be treated as confidential documents. The Parliamentary Elections Committee had to consider its report for submission to the Council and Representative Body. It will be remembered that at last year's Annual Representative Meeting some doubt was expressed as to the utility in present circumstances of the Medical Representation in Parliament Fund. The Committee believes that the potentialities of the Fund are by no means exhausted, and is recommending the Council accordingly. The Joint Research Subcommittee has now settled the form of its recommendations with regard to the institution by the Association of a new experiment in collective investigation. These recommendations will be considered by the June meeting of Council, and, if approved, should provide material of more than ordinary interest for discussion by the Representative Body.

Medical Secretaries' Visits.

On May 18th the Medical Secretary was present at a meeting of the Eastbourne Division which considered the issue of an invitation to the Association to hold its Annual Meeting at Eastbourne in the near future. The occasion was marked by an event of considerable interest—namely, the twenty-first anniversary as honorary secretary of the Eastbourne Division, of Dr. Muir Smith, the present holder of the office. It is not often that so long a term of office can be celebrated and the Association as well as the Division has reason to congratulate Dr. Muir Smith upon this landmark in an unusual record of service. During the war Dr. Muir Smith was honorary secretary of the Local Medical War Committee as well as of the Division. On the evening of May 17th the Deputy

Medical Secretary met the members of the medical staff of the Northwood and Pinner Hospital at Northwood to discuss the hospital policy of the Association, and he addressed the members of the Willesden Division next day on the work of the Association during the past year.

Rendering of Accounts to Local Authorities by Doctors called in by Midwives.

The Medico-Political Committee at its last meeting had under consideration complaints by doctors that local authorities had refused to settle accounts which they had sent in for services rendered when called in by midwives under Section 14 of the Midwives Act, 1918, on the ground that these accounts had not been rendered within the statutory period of two months. The position is as follows. Under the Midwives and Maternity Homes Act, which came into force on August 4th, 1926, Section 14 (2) of the Midwives Act, 1918, which governs the payment to doctors by local authorities of fees when they are called in on the advice of midwives, has been amended to read as follows:

"It shall be a condition of the payment of such fee that the medical practitioner so called in shall state in his claim to the local supervising authority the nature of the emergency, and shall submit his claim within two months from the date on which he was called in."

It is, therefore, the law that these accounts must be rendered within the prescribed period, and the Medico-Political Committee was informed officially that any local authority paying accounts not sent in within the statutory period would be surcharged by the auditor. The definite period was inserted in the Act because some doctors in the past had been very dilatory in sending in their accounts, thereby putting local authorities to great inconvenience in keeping their accounts in order. It is important that members of the profession should make a special note of the position and render an account to the local authority as soon as the attendance on a given case is completed.

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

Locumtenents' Bureaux.

By GATESHEAD: That (with reference to paras. 24 and 25 of the Annual Report of Council) in the opinion of this meeting the Council has exceeded its instructions and failed to realize the basic policy set forth in Minutes 57, 58, and 59, A.R.M. 1925.

Advertisements of Pathological Institutes.

By GATESHEAD: That (with reference to the recommendations contained in para. 96 of the Annual Report of Council) the Representative Body disapproves of the policy advocated in relationship to the advertisement of Pathological Institutes such as is referred to in the first recommendation of Council upon Pathological Institutes, and instructs the Council to summarily exclude advertisements of such Pathological Institutes from the columns of the BRITISH MEDICAL JOURNAL, this seeming to be in accord with the views expressed in paragraph 91 of the Annual Report.

Medical Practitioners Engaged in Municipal Maternity Hospitals.

By GATESHEAD: That (with reference to paras. 115 and 116 of the Annual Report of Council) the following resolution of the Annual Representative Meeting, 1926:

> *Minute 92.*—Resolved: That where a general practitioner is called upon to render assistance at a confinement in a Municipal Maternity Hospital, the fees payable to such practitioner should not be less than the scale of fees approved by the Ministry of Health for the payment by Local Supervising Authorities to medical practitioners called in on the advice of midwives under Section 14 of the Midwives Act, 1918.

be amended (*a*) by the insertion, after the words a "confinement," of the words "or any condition arising directly out of parturition"; and (*b*) by the addition after the words "Midwives Act, 1918," of the words "but that the time limit of 28 days should be removed and the local supervising authority be responsible for the fees of medical practitioners under a similar scale until such time as the patient is removed from hospital."

Association Notices.

COUNCIL ELECTION.

THE names of members already declared elected to the Council for the session 1927-28 in respect of the nineteen groups of Home Branches in which there were no contests were published in the BRITISH MEDICAL JOURNAL SUPPLEMENT of May 7th, 1927 (p. 197). Dr. T. FRASER, C.B.E., D.S.O. (Aberdeen) has been elected as a result of the voting in the group comprising the Aberdeen, Dundee, Northern Counties of Scotland, and Perth Branches.

ELECTION OF FOUR REPRESENTATIVES AND FOUR DEPUTY REPRESENTATIVES BY PUBLIC HEALTH SERVICE MEMBERS.

The voting by the Public Health Service Members has resulted in the election of four representatives on the Representative Body of the Association, 1927-28, as follows:

Dr. T. EUSTACE HILL, O.B.E., Durham.
Professor H. KERR, O.B.E., Newcastle-on-Tyne.
Dr. R. A. LYSTER, Hampshire.
Dr. E. WARD, South Devon.

and of four deputy representatives, as follows:

Dr. C. W. HUTT, Holborn, as Dr. HILL's deputy.
Dr. A. A. MCWHAN, Berwickshire, as Professor KERR's deputy.
Dr. A. MIDDLETON HEWAT, London, as Dr. LYSTER's deputy.
Dr. G. H. PEARCE, Batley, as Dr. WARD's deputy.

TABLE OF DATES.

June 2, Thurs.	Last date for receipt at Head Office of names of Representatives and Deputy Representatives.
June 8, Wed.	*Council.*
June 16, Thurs.	*Meetings of constituencies* must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh) *A.R.M.* (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

EAST YORK AND NORTH LINCOLN BRANCH: EAST YORKSHIRE DIVISION.—The annual general meeting of the East Yorkshire Division will be held at Bridlington to-day (Friday, May 27th). Programme: 3 p.m.—The members will meet at the Priory Church and will be conducted over it by Canon Topham, after which the curator, Mr. Charlesworth, will show the party over the Bayle Gate and the museum. 4.15 p.m.—On adjourning to the board room of the Lloyd Hospital the business meeting will be held. Agenda: Annual report of the Executive Committee; financial statement; election of officers; representatives on the Branch Council, and Executive Committee. Tea will be provided by the hospital staff.

EDINBURGH BRANCH.—The annual meeting of the Edinburgh Branch will be held in the Scottish House of the Association, 6, Drumsheugh Gardens, Edinburgh (telephone: Edinburgh 24361), on Wednesday, June 15th, at 3.30 p.m. Tea will be served from 3.15. Business: Report of Branch Council, including the annual reports of Branch and of Divisions; treasurer's annual report and business; election of office-bearers for 1927-28; report of election of representative for 1927-28 for the Edinburgh and Fife Branches to the Council of the Association; election to the annual vacancy on the board of management of the Queen Mary Nursing Home; Annual Meeting of the Association in Edinburgh in July—reception by Branch; any other competent business.

KENT BRANCH.—The fourteenth annual meeting of the Kent Branch will be held at the Spa Hotel, Tunbridge Wells, on Wednesday, June 15th. The Council will meet in the morning. The President-Elect, Dr. F. R. B. Bisshopp, kindly invites each member attending and his wife to luncheon at the Spa Hotel at 2 p.m. Annual meeting, 3 p.m. Agenda: Report of the election of new officers, who thereupon take office; thanks to retiring officers; report of Branch Council and financial statement; appointment of

auditor; inaugural address by the President. Garden party by the President and Mrs. Bisshopp at 4 p.m. Annual dinner (morning dress) at Spa Hotel (tickets 7s. 6d. each, exclusive of wines, which will be provided by the Tunbridge Wells Division), 7 p.m. Competition for the Tennyson-Smith golf challenge cup on the Spa Golf Club course. Intending competitors should at once send in their names, addresses, and handicaps to Dr. F. C. Linton, 6, Earl's Road, Tunbridge Wells, who will give all necessary information. Members intending to be present at the annual meeting are requested to send a postcard to Dr. D. Davies, 8, Lonsdale Gardens, Tunbridge Wells, not later than Saturday, June 11th, stating whether they will attend: (1) The President-Elect's luncheon, and whether alone or accompanied; (2) the annual meeting; (3) the annual dinner. The Spa Hotel is under a mile from the railway station and has ample accommodation for parking cars.

METROPOLITAN COUNTIES BRANCH.—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 21st, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) to sanction the necessary alterations in the rules of the Branch to enable the president-elect to become an *ex-officio* member of all committees; (5) presidential address by Mr. E. B. Turner, F.R.C.S., entitled "Influenza from 1889 to 1927: its therapeutic and clinical aspects."

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.—A clinical evening arranged by the Lewisham Division will take place at St. John's Hospital, Lewisham, on Tuesday, May 31st, at 8.45 p.m.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—The annual meeting of the South-West Essex Division will be held in the Wesleyan Schoolrooms, High Road, Leyton (near Midland Station), on Tuesday, May 31st, at 5.30 p.m. sharp. Agenda: Correspondence; annual report of Division; election of officers for session 1927-28; lecture by Mr. A. J. Couzens, F.R.C.S., surgeon, Queen Mary's Hospital, Stratford: Personal experiences of abdominal disease, mainly from the diagnostic standpoint. Members are asked to make a special effort to attend this, the last meeting of the session. Tea at 3.15 p.m

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 14th, at 9 p.m. Mr. J. Paterson, C.B.E., will read a paper on internal haemorrhage.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, to-day (Friday, May 27th), at 8 p.m. Mr. A. M. Connell, professor of surgery in the University of Sheffield, will give an address on "Some of the injuries frequently met with in coal mining and their treatment by the general practitioner."

NORTH OF ENGLAND BRANCH: CLEVELAND DIVISION.—The annual general meeting of the Cleveland Division will be held at the Zetland Hotel, Saltburn, on Thursday, June 9th, at 3 p.m. Agenda: Letter from the secretary; statement of accounts: (*a*) annual financial, (*b*) voluntary fund, (*c*) dance; annual report of the Executive Committee; correspondence; election of representative and officers for 1927-28. Members attending the meeting and desirous of being served with tea should hand in their names to the hotel office on arrival. Tea will be served at 4 o'clock, charge 2s., payable at the time of booking.

NORTH OF ENGLAND BRANCH: TYNESIDE DIVISION.—A golf match has been arranged to take place between the South Shields and Tyneside Divisions on Sunday, July 3rd, at Brancepeth. Lunch, 1 p.m.; singles, 2 p.m.; tea, 5 p.m.; foursomes, 6 p.m. As the object of the meeting is to further social intercourse, it is hoped that all members who have ever wielded a club will do so on this occasion, and that others who do not play will come also.

SOUTH MIDLAND BRANCH: NORTHAMPTON DIVISION.—A meeting of the Northampton Division will be held at the General Hospital, Northampton, to-day (Friday, May 27th), at 3 p.m. Agenda: Annual Report of Council; medical charities; appointment of a divisional charities secretary, if considered advisable.

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.—A meeting of the South Suffolk Division will be held at the Crown and Anchor Hotel, Ipswich, to-day (Friday, May 27th), at 3.30 p.m. Non-members are also invited. Agenda: Business arising out of minutes; election of representative in Representative Body. A lecture on the modern attitude to functional nerve disease will be given by Dr. Hugh Crichton Miller.

SURREY BRANCH: GUILDFORD DIVISION.—The annual meeting of the [illegible] e held at the Royal Surrey County Hospital, [illegible] .. June 2nd, at 4 p.m. Tea will be served at 3.45 p.m.

YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.—The annual picnic of the Huddersfield Division will take place on Wednesday, June 15th. The char-a-banc will leave York Place at 12.30 p.m. for Malham. Afternoon tea will be served at the Airedale Private Hotel on arrival at Malham about 3 p.m. The afternoon will be spent in and around Malham. Gordale Scar and Malham Cove are both within easy walking distance and there will be time to walk to both. The char-a-banc will leave Malham at 6 p.m. for Skipton, where dinner will be served at the Black Horse Hotel at 7 p.m. The char-a-banc will leave Skipton at 8 p.m., and return via Ilkley to Huddersfield, where the party should arrive about 10 p.m. The inclusive charge for char-a-banc, tea, dinner (exclusive of drinks), and tips will be £1 a head; for those going in their own cars 10s. a head. Arrangements for the dinner must be completed by Saturday, June 11th.

YORKSHIRE BRANCH: ROTHERHAM DIVISION.—A meeting of the Rotherham Division will be held at the Crown Hotel to-day (Friday, May 27th), at 8.30 p.m. Agenda: Report of Executive Committee as to the scale of minimum commencing salaries for public health medical officers, and recommendation of Executive to adopt resolution under Ethical Rules; Annual Report of Council; appointment of representative in Representative Body; annual report of Division for 1926.

Meetings of Branches and Divisions.

CAPE OF GOOD HOPE (MIDLAND) BRANCH.

THE April meeting of the Cape Midland Branch was held at Graaff Reinet on April 23rd, when the President, Dr. J. G. MUTERER, was in the chair.

A visit was paid to van Ryneveld's Pass irrigation dam, after which the party motored to Dalham, where they were entertained to tea by Mrs. Walter Rubidge. A most enjoyable luncheon, presided over by Dr. MASSEY, followed at the Graaff Reinet Hotel, where the visitors were entertained by the local doctors, additional guests being representatives of the dental and legal professions. Reference was made to the fact that the meeting was the direct outcome of Dr. Cox's visit to Graaff Reinet last year.

The members then proceeded to the Midlands Hospital, where the meeting of the Branch was constituted. After Drs. Berg (Aberdeen) and Symington (Beaufort West) had been welcomed as guests, clinical cases were shown as follows:

Dr. H. C. HUDSON (Graaff Reinet) showed: (1) A European, wounded in France, who had received a bullet wound in the neighbourhood of the left groin, the point of exit of the missile being on the right buttock. The bullet, in its passage, had affected the femoral or common iliac artery, for a powerful, apparently sustained, thrill was palpable over the groin. On auscultation a loud aneurysmal bruit could be heard and traced in the line of the femoral artery as far as the popliteal space. A discussion on aneurysmal varix and varicose aneurysm followed. (2) A native child, aged 2½, with a large swelling underneath the tongue. When the case was first seen some months previously, the tumour was about the size of a large orange, completely blocking the mouth, and it had actually pushed out of the jaw all the lower incisor teeth and the canines. The swelling had been incised and a large amount of fetid material evacuated. Although much smaller in size now, it had filled up with clear fluid from time to time. In the differential diagnosis ranula and sublingual cyst were discussed.

Dr. BERG, who had brought two cases with him from Aberdeen (thirty-five miles away) by car, showed: (1) A native male, aged 11, who showed marked sabre blade deformity of both tibiae. The nasal cartilages had been attacked by the syphilitic process as far as the nasal bones, and the whole body was in an ulcerated condition. An interesting feature of the family history was that there were seven other children of the same parents, and all were apparently quite healthy. (2) A European girl, aged 11, who presented the features of the juvenile type of pseudo-hypertrophic muscular paralysis. The father and mother were both well, and there was no evidence of the condition having occurred in previous generations. Dr. Berg stated that her elder sister was suffering from the same condition, and probably would not live longer than a week. Her brother, aged 14, had died two months ago from the same condition. The third, her sister aged 13½, showed no signs of the condition. The fourth member of the family was the patient. Another brother and sister, aged 8 and 3 respectively, were perfectly well.

Dr. R. D. LAURIE (Port Elizabeth) demonstrated the following pathological specimens: (1) A five months' gravid uterus (foetus *in situ*) with fibroid, the size of a pineapple, undergoing red degeneration. (2) One of his own teeth with "abscess" attached which had been extracted after radiography because of a polyneuritis of some years' duration. A complete cure had been effected. Dr. R. D. Laurie showed also some dental radiograms indicative of dental sepsis, and a specimen of carneous mole from a case under the care of Dr. Wilson.

Dr. GORDON ROBSON showed a specimen of cerebral abscess, a full account of the case having been published recently in the *Journal of the Medical Association of South Africa*.

The cases and specimens were discussed very fully by the members present, who then adjourned for tea on the invitation of Matron Wallace.

On resuming, Dr. KARL BREMER (President-Elect) read a most informative paper on certain aspects of hydatid disease, which was most appreciated, especially by those members who had come from non-hydatid districts. Dr. R. M. LEITH (Port Elizabeth) read a paper on nasal polypi, and showed specimens. The paper contained much information of value to the general practitioner. Dr. GORDON ROBSON (Port Elizabeth) read some notes on the urea concentration test in its medical and surgical bearings. The reader hoped that the test, because of its simplicity, would be used more frequently in the elucidation of renal conditions. A general discussion on the three papers followed.

Dr. KARL BREMER then referred to this meeting as a medical oasis in the lives of the country members, laid particular stress on accessibility by road and rail being a powerful consideration in the determination of Branch and Division areas, and moved the

following resolution, which was seconded by Dr. HUDSON (Graaff Reinet) and directed to be sent to the Federal Council:

That it is desirable to form a Division of the Cape Midland Branch to comprise the districts of Graaff Reinet, Aberdeen, Murraysburg, Richmond, Jansenville, and Steytlerville.

This was unanimously agreed to.

LANCASHIRE AND CHESHIRE BRANCH: BURNLEY DIVISION.

A SCIENTIFIC meeting of the Lancashire and Cheshire Branch was held in the Victoria Hospital, Burnley, on February 23rd, when Dr. T. SNOWBALL, chairman of the Division, presided. The president of the Branch, Dr. Burton, and the honorary secretary of the Branch, Dr. A. C. Sturrock, were present, and cordial invitations were extended to all medical practitioners in Burnley and the district.

Mr. J. H. WATSON (Burnley) read a paper on fractures; Dr. HAWORTH (Nelson) discussed the physical examination of the heart *in disease*: and Dr. R. I. C. RODGERS (Burnley) read a paper on cholecystography; cases were shown by the medical and surgical staff of the hospital. Dr. PRIESTLEY, pathologist to the Burnley Corporation and Victoria Hospital, gave a demonstration in the pathological laboratory. Tea was afterwards provided for the members by the hospital board of management.

The meeting was very successful, and the comment was made by Dr. STURROCK that it was the first time within his memory that a Division had invited a Branch to a scientific meeting and had provided all the papers and demonstrations.

LANCASHIRE AND CHESHIRE BRANCH: CREWE DIVISION.

IN response to an invitation from Dr. Spriggs, the Crewe Division met at Ruthin Castle (Duff House), North Wales, forty-five miles from Crewe, on Wednesday, May 11th.

Dr. E. I. SPRIGGS received the party and gave a brief survey of the work of the institution. The visitors were shown over the various departments where demonstrations on diagnosis and treatment were given. They were much impressed by the completeness of the equipment for the scientific investigation and treatment of disease; the *x*-ray room received special attention. After tea, provided by Dr. Spriggs, the visitors made a tour of the older parts of the castle and grounds. Dr. PATTERSON, who conducted the party, gave an interesting résumé of the history of the castle, and with the help of maps and plans reconstructed as much as was known of the original lay-out of the place. On reassembling in the hall, Dr. ENGLISH (chairman) thanked Dr. Spriggs for his very great kindness in entertaining the party and in affording them such an interesting, instructive, and enjoyable outing.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

THE annual general meeting of the Lewisham Division was held at the Town Hall, Catford, on May 17th, when Lieut.-Colonel C. THOMSON was in the chair.

The annual report was read and it was agreed to circulate it to the members with the next notice of meeting.

The following officers were elected:

Chairman, Dr. W. E. Hallinan, *M.C. Vice-Chairman*, Dr. J. W. Miller. *Honorary Secretary*, Dr. C. J. B. Buchan. *Representative in Representative Body*, Dr. D. B. I. Hallett. *Deputy Representative in Representative Body*, Dr. C. J. B. Buchan

The Annual Report of the Council was considered and the recommendation in regard to pathologists received special attention.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.

THE annual general meeting of the Marylebone Division was held on May 13th and was well attended. Dr. D. S. ROXBURGH was in the chair.

After the annual report had been read by the HONORARY SECRETARY the meeting proceeded to elect divisional officers, representatives, and deputy representatives, and to nominate various members for office on the Branch Council.

The Annual Report of Council was next considered. Dr. C. O. HAWTHORNE opened the discussion on pathologists and pathological institutes; after a short discussion a resolution approving of the Council's report on this matter was carried.

Mr. WALTER G. SPENCER read a short paper on the Dogs Bill. This elicited considerable discussion in which LORD DAWSON, Mr. BISHOP HARMAN, and Drs. HAWTHORNE, GOODBODY, and ROXBURGH took part. A resolution in the same terms as that at the meeting held at the British Medical Association House on April 4th, 1927 (SUPPLEMENT, April 9th, p. 114), was carried unanimously.

The Landlord and Tenants Bill No. 2 was discussed in an opening paper by Dr. GRAHAM LITTLE, M.P., who held out hopes that professional premises would be included in the bill.

A vote of thanks to the retiring officers of the Division was proposed by Dr. C. O. Hawthorne, who called for special recognition of the services of the retiring honorary secretary after eight years' service. The motion was ordered to be placed on record in the minute book. Dr. SPURGIN briefly replied.

WILTSHIRE BRANCH.

THE annual general meeting of the Wiltshire Branch was held at the County Mental Hospital, Devizes, on May 11th, when the President, Mr. H. H. GREENWOOD, was in the chair.

The following officers were elected:

President, Dr. Tangye. *President*, Mr. H. H. [illegible] A. W. K. Straton, *Vice-in Representative Body*, Dr. C. E. S. Flemmi[illegible] *in Representative Body*, Dr. J. E. Gordon. He[illegible] Bond.

The following resolution proposed by Dr. FLEMMING was adopted

That this meeting approves of ante-natal examination and is anxious that any movement to encourage it should be supported in every way but is of opinion that more harm than good will be done if an attempt is made to carry out the work in the manner suggested by the form issued by the Central Midwives Board for use by midwives.

A copy of the resolution was directed to be sent to the British Medical Association, the Central Midwives Board, the Ministry of Health, and the Wilts County Council.

Dr. TANGYE announced that he was preparing a simpler form which would be better adapted for use by the average midwife, and the matter was referred to the Medical Advisory Committee.

After the meeting the members were entertained to tea, and were shown round the institution.

YORKSHIRE BRANCH: WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.

THE annual meeting of the Wakefield, Pontefract, and Castleford Division was held at the Great Bull Restaurant, on May 12th, preceded by supper at 7.45 p.m. Dr. T. GIBSON was in the chair, and nineteen other members were present.

Correspondence in reference to street accidents and medical charities was read, and the honorary secretary was instructed to act in accordance with Circular D11 26-27, when it was necessary again to circularize members.

Some discussion took place with reference to an inquest on a hospital patient when the local coroner called a night sister to give evidence instead of the resident medical officer, who was thus deprived of his fee. In view of the fact that the new Coroners Act had only recently come into force, it was decided to take no action in the matter.

The following officers were elected for the ensuing year:

Chairman, Dr. T. Gibson. *Vice-Chairman*, Dr. H. Scholefield. *Honorary Secretary and Treasurer*, Dr. N. S. Twist. *Representative in Representative Body*, Dr. Steven. *Deputy Representative*, Dr. Duff.

Rules of organization for the Division were adopted.

The Annual Report of the Council was discussed, and appreciation of its contents was expressed.

The annual report of the Division recorded a membership of 87. During the year seven lecture meetings with an average attendance of 30 took place, and were much appreciated; the Executive Committee met on four occasions.

At the conclusion of the general business, Dr. G. C. ANDERSON, Deputy Medical Secretary, gave an extremely interesting and lucid account of the work of the Association during the past year. On the motion of Dr. HILLMAN, seconded by Dr. STEVEN, a vote of thanks to Dr. Anderson was carried with acclamation.

YORKSHIRE BRANCH: YORK DIVISION.

THE annual meeting of the York Division was held on May 7th. At the commencement of the proceedings Dr. P. MACDONALD was in the chair.

With reference to travelling expenses for medical witnesses in coroners' courts the HONORARY SECRETARY reported that the East Riding County Council had, at his request, reconsidered the matter, and had subsequently agreed to allow the expenses.

The annual report of the honorary secretary having been circulated was approved.

The following officers were elected:

Chairman, Dr. G. W. Gostling. *Vice-Chairman*, Dr. N. C. Forsyth. *Honorary Secretary*, Dr. J. C. Lyth. *Representative in Representative Body*, Dr. P. Macdonald. *Deputy Representative in Representative Body* Dr. H. E. K. Reynolds.

In the absence of Dr. G. W. Gostling, the vice-chairman, Dr. N. C. FORSYTH, succeeded to the chair.

On the motion of Dr. LYTH, seconded by Dr. EVELYN, a hearty vote of thanks was accorded to the retiring chairman, Dr. P. Macdonald, for his services during the past year.

The annual report of the Council was discussed and the representative duly instructed.

It was decided to approve the following fees arranged for police calls in the West Riding area between the honorary secretary and the chief constable, subject to reasonable mileage being paid: 7s. 6d. for day call and 10s. 6d. between 10 p.m. and 8 a.m.

In connexion with the 1,300th anniversary of St. Peter's School, York, Dr. LYTH called attention to a proposed memorial to be erected in the shape of a new library for the school, and suggested that the Division might mark its appreciation of the advantages to the local medical profession of such a school by raising a voluntary fund towards the memorial. After discussion it was resolved that a fund should be raised to allow of an annual science prize being given to the school, to be known as the British Medical Association Science Prize, and that members be asked to subscribe to this fund subject to a sum of not less than £50 being promised before the 1,300th anniversary (June 29th).

Reference was made to a circular issued by the Medical Defence Union and the London and Counties Medical Protection Society, regarding limitation of liability, and urging the desirability of an *x*-ray examination in every case of injury to a bone or joint. The honorary secretary was instructed to write to headquarters explaining the concern felt by the Division at the limitation of liability, and requesting that the matter should be taken up with the societies.

The HONORARY SECRETARY reported that in compliance with the request from the Medical Secretary, he had communicated with Sir John Marriott, M.P., urging him to use his vote and influence against the passage of the Dogs Bill, and had received a sympathetic reply.

GENERAL COUNCIL
OF
MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1927.

THE one hundred and twenty-fifth session of the General Medical Council opened on Tuesday, May 24th, at its house in Hallam Street, London. Sir DONALD MACALISTER, Bt., K.C.B., presided.

Appointments.

The appointment of the following new members of Council was officially notified: Dr. E. Farquhar Buzzard, as representative of the Royal College of Physicians of London for five years from January 27th, 1927, and of Dr. H. H. Dale, as Crown nominee for five years from April 22nd, 1927. Both the new members were introduced by Sir Humphry Rolleston and took their seats. Professor Thomas Sinclair was also introduced on his reappointment as Crown nominee for Northern Ireland for five years from May 13th, 1927. Professor Sinclair was introduced by Dr. J. A. Macdonald.

PRESIDENT'S ADDRESS.

Sir Donald MacAlister then delivered the following address from the chair.

Gentlemen,—Two years ago it fell to me to intimate the retirement of our able colleague, Sir Isambard Owen, after a long life of distinguished service to University education in England and Wales. I have now, with regret, to announce that he died in Paris on January 14th, at the age of 75, happy in the fruition of his manifold labours, and in the enjoyment of the honour these had brought him.

Retirements and New Appointments.

Sir Nestor Tirard, a Crown member for England, and Sir Edward Coey Bigger, Crown member for Ireland, have retired on the expiration of the term for which they were appointed.

We cannot part with Sir Nestor without grateful acknowledgement of the valuable assistance he has for thirty-two years, and in numerous capacities, rendered to the Council in connexion with its work on the *Pharmacopoeia*. As secretary, reporter, medical editor, member and honorary secretary of the Pharmacopoeia Committee, and representative of the Council on a succession of national and international conferences and committees, he has freely given of his time and labour to the advancement of pharmacopoeial knowledge, and the improvement of pharmacopoeial organization. He was originally appointed in 1895 to act as secretary to the Pharmacopoeia Committee, and to assist the President in matters relating to the *Pharmacopoeia*. Three presidents in succession have had abundant reason to be thankful to him for his faithful and effective help, and none more than myself during the twenty-three years of my presidential association with him. He has amply earned, and I am sure he will receive, the thanks and good wishes of the Council, and indeed of the profession at large.

In filling the vacancy caused by Sir Nestor Tirard's retirement, His Majesty in Council has been graciously pleased to have regard, as before, to our responsibility for the production of the *British Pharmacopoeia*. The new Crown member is Dr. Henry Hallett Dale, C.B.E., F.R.S., M.A., M.D., F.R.C.P., Secretary of the Royal Society, Head of the Department of Biochemistry and Pharmacology of the Medical Research Council, and like Sir Nestor a member of the Advisory Committee under the Therapeutic Substances Act, soon to become fully operative. Dr. Dale's great eminence in the application of pharmacological and biochemical science to medicine, and his administrative experience in many fields, will render him specially welcome to the Council in general, and to the Pharmacopoeia Committee in particular. Having had the privilege of association with him in detailed inquiries bearing on the *Pharmacopoeia*, I can testify to his grasp of its problems, and his readiness to further their solution. It is with real and hearty satisfaction that I have given him in your name the right hand of fellowship. I have no doubt that your enlightened self-interest will move you to appoint him forthwith to the Pharmacopoeia Committee, in the hope that his multitudinous avocations will permit him, in growing measure, to afford it his aid and counsel.

For ten years Sir Edward Coey Bigger has co-operated with us, particularly in matters concerning public health and professional examinations, on which he is recognized as an expert authority. He has just furnished the Executive Committee with a useful and interesting report on his recent visit to universities and medical schools in Australia and Ceylon. It is an incidental consequence of the establishment of the Irish Free State, in which, after holding high office in the medical service of former Governments, he is now a senator and chairman of the Public Health Council, that he leaves us for other duties. He will carry with him, into the new spheres of administrative usefulness that are entrusted to his charge, our sincere and very friendly congratulations.

No new member, but an old and experienced colleague, Colonel Thomas Sinclair, C.B., M.P., and Senator of Northern Ireland, has taken Sir Edward's place as Crown member for Ireland. We shall, therefore, still continue to enjoy the benefit of his kindly wisdom. The Queen's University of Belfast has not yet nominated a successor to Colonel Sinclair.

The Royal College of Physicians of London has, however, sent us, in the room of Sir Humphry Rolleston, now member for Cambridge University, a worthy successor in the person of Dr. Edward Farquhar Buzzard, M.A., M.D., Physician Extraordinary to the King, and an old Oxford "blue." He will find on the Council many who already know and appreciate his published writings on neurological medicine, and who will value his personal acquaintance and his fellowship in the work of the Council.

The Council will learn with regret that we can no longer call upon Mr. E. W. Hansell, K.C., for the service as Assessor he has, since 1920, most efficiently and acceptably rendered. We can but offer him our congratulations on the promotion to judicial office which has placed him beyond our reach, and the assurance of our unfailing regard for him as jurist and as friend.

In order that you may not be without skilled advice during the present meeting, I have, with the approval of the Executive Committee, arranged for the attendance of Mr. Douglas Bartley, who has already been invited to advise the Dental Board as its assessor. In the course of the session I shall take your instructions regarding the future.

The Position in the Irish Free State.

I mentioned in my address last November that the Medical Act, 1926, of the Irish Free State would expire in February, 1927, unless fresh legislation was carried through. A Medical Act, 1927, was accordingly passed in that month to enable the existing arrangements to be continued until June 21st, 1927. In the meantime, conferences have taken place between the Governments of Great Britain and Northern Ireland and the Free State, at which I was courteously invited to be present. These have happily resulted in an agreement which has been signed on behalf of the three Governments, has been ratified by the Free State Legislature, and now awaits parliamentary ratification in this country. It provides that the Medical Acts hitherto in force in Great Britain and Ireland shall continue to apply to the Free State, as concerns the functions, constitution, powers, authorities, and jurisdiction of the General Medical Council and its Branch Councils. It provides that the direct representative for Ireland shall continue to be elected by the registered practitioners resident in any part of Ireland, and that the Crown member for Ireland shall be appointed by His Majesty in Council on the recommendation of the Governor of Northern Ireland. And it ensures that practitioners registered in the *Medical Register* shall be entitled to be registered and to practise in the Free State.

By an Act of the Oireachtas a Free State Medical Council has been established to maintain a local medical register distinct from the *General Register*, and to exercise in regard to it a jurisdiction distinct from that of the General Council. But the jurisdiction of the General Council in Southern Ireland will not be displaced or diminished for any purpose of admission to or removal from the *General Register*, or of maintaining the standard of professional education and examination in reference to registrable qualifications granted in Ireland.

The provisions of the agreement appear to me, after careful, and indeed anxious, consideration, to afford a satisfactory solution of the professional problems created by the establishment of the new Governments in Ireland. It is equitable as between autonomous Governments. It is practicable from an administrative point of view. Above all, it necessitates no change in the relations that have so long subsisted between the General Council, its Irish Branch Council, and the licensing bodies and medical practitioners of Ireland.

Reciprocity with Quebec.

The Executive Committee has received information to the effect that the Legislature of the Province of Quebec has abrogated Section 48 of its Medical Law. This section enacted that practitioners registered in Great Britain and Ireland under the Medical Acts were entitled to be licensed to practise in the Province, provided Part II of the Medical Act, 1886, was applied to Quebec. That application was made in this country, for the purpose of thus establishing reciprocity, in 1908; and for nearly twenty years the medical degrees granted by Laval and McGill Universities have been registrable in our *Register*. If the abrogation of the section is confirmed, practitioners registered in this country will henceforth be denied the privilege of registration in the Province, to which they have hitherto been entitled. It will, therefore, become the Council's duty to represent to His Majesty in Council that the conditions laid down in the Medical Act, 1886, are no longer fulfilled in Quebec, and to suggest that the Order in Council of 1908 should accordingly be rescinded. From a letter sent on behalf of the Provincial Council it appears that "the ever-increasing number of 'strangers' who come to exchange their English licence" for that of Quebec has moved the Council to procure the repeal of reciprocity.

Indian Universities.

The visit paid to India during the winter months by Sir Norman Walker and Colonel Needham, on the invitation of the Secretary of State, with the concurrence of the Government of India and of the provincial authorities, was successfully completed in March. I am happy to say that, though Sir Norman gravely risked his health and Colonel Needham sacrificed his home leave in undertaking the journey, both have returned home safe and well. They speak warmly of the manner of their welcome everywhere, and of the opportunities of conference and counsel afforded them by the Viceroy, the Governors of the Presidencies and Provinces, the Universities and Colleges, and the medical profession throughout India. Communications which have reached me from these and other sources testify that the visit was regarded as of deep importance for the future of Indian medicine, and that the Council's acceptance of the invitation addressed to its representatives had been rightly interpreted as attesting its sincere interest in India and its genuine wish to contribute to her progress in professional education. The Council owes a special debt of gratitude to its envoys for the way in which they have carried through their delicate and difficult mission, and for the happy impression of the Council's purpose and desire they have conveyed to the Indian authorities.

They have now reported to the Executive Committee on those parts of their comprehensive survey that concern the immediate question before the Committee—namely, the continuance for a further period of the recognition granted to certain Indian medical degrees. A report of a satisfactory nature has been received regarding the efficiency of the Medical College at Singapore; and also reports dealing with Calcutta, and with the new Universities of Rangoon, Patna, and Andhra, which call for detailed consideration. To these reports, and to certain larger questions of primary importance on which much has still to be reported, the Committee proposes to devote its July session. In particular it is imperative to discuss what steps can be contrived to maintain in India, for degrees that may be recognized for extra-Indian purposes, the standards of education and examination that are necessary to guarantee their sufficiency for registration and practice in this country. It is clear that recognition, renewed from year to year under conditions that cannot be fully complied with, does not afford a solution of the problem. The whole subject must be placed on a more satisfactory basis. The condition of periodic visitation and inspection through the direct agency of the Council is no longer practicable The number of universities and medical colleges has greatly increased. They are scattered over a vast area from Bombay to Rangoon. And in future the high personal qualifications and ample experience of our present visitors may not be at our disposal. Thus it appears highly expedient that steps toward a new method should now be taken. These steps must originate in India, and we learn that Indian proposals, bearing on the subject of central direction, have already been under consideration by the Government and the Legislature. Whatever method is adopted, it seems necessary for efficiency that it should be carried out as a function of Government, or by some single authority in India with which the Council could communicate directly, and from which it could obtain from time to time the information it requires to enable it to fulfil its duties under Part II of the Medical Act, 1886. In view of the commissions that will soon be set up to consider *inter alia* improvements in the machinery of Indian administration, it may be opportune for the Council to call the attention of the Secretary of State to the *lacuna* in medical organization I have indicated. In order to give an opportunity for the initiation of improved arrangements in this regard, the Executive Committee have at this session resolved to renew for one year more the recognition hitherto accorded to the medical degrees of Bombay, Madras, Lahore, and Lucknow.

Births and Deaths Registration Act.

I am asked by the Ministry of Health to call the attention of the Council and of the profession to the fact that the Births and Deaths Registration Act, 1926, comes into operation on July 1st, 1927. Section 6 provides that "Every certificate of cause of death required to be given by Section 20 of the Births and Deaths Registration Act, 1874, shall be in the prescribed form; and the forms to be furnished under paragraph (1) of that section shall be the forms so prescribed." The new forms are less ambiguous than the old, and are intended to enable practitioners to furnish the precise information that is essential for the compilation of accurate national statistics. Medical practitioners will do well, in view of the Council's *Warning Notice* concerning laxity in certification, to give heed to the altered form of testimony which the law now requires; and teachers of medical students, in giving them the instructions "on the duties which devolve on practitioners in relation to the State," recommended in the Council's resolutions on the curriculum, will no doubt take the opportunity of pointing out the obligations imposed by the new law concerning death certification.

The Pharmacopœia.

The Committees on the *Pharmacopœia*, and on the Poisons and Pharmacy Acts, to which I referred in my last address, have been occupied in taking evidence on the subjects referred to them. They are, I understand, shortly to proceed to the preparation of their reports, and these we may hope to have before us at our next session.

Disciplinary Inquiries.

Much of your time will be taken up by judicial inquiries of a disciplinary nature, and the usual reports from Standing Committees, some of them dealing with large questions of medical education and examination, will be presented. Unless something unforeseen occurs, there is reason to hope that the session will not extend beyond this week.

National Insurance.

LONDON COUNTY COUNCIL OPINION ON THE ROYAL COMMISSION REPORT.

SEVERAL committees of the London County Council have been examining the majority and minority reports of the Royal Commission on National Health Insurance, and their observations were presented to the Council on May 24th. The only matter which directly affects the Council, apart from its position as an employer of labour, is the proposed abolition of insurance committees and the transference of their powers and duties to the appropriate local authorities. This proposal is welcomed by all the four committees of the Council to which the question has been referred. The Public Health Committee considers it to be an encouraging step in the direction of that unification of local administration which is essential in order to attain efficiency and economy in health services. The outstanding feature in the findings of the Royal Commission, in the Public Health Committee's view, is the unanimous opinion that the insurance scheme should be considered not merely as a self-contained system, but in its relation to those other important and varied activities of the State which are concerned in the promotion of health. The defect arising from the multiplication of administrative bodies and division of functions in respect to health services is one which, the Public Health Committee states, has been acutely felt for years by those intimately concerned with public health work. The committee regrets, however, that the Commission has not seen its way to entertain the proposal put to it by the Council for certain grants and allowances from insurance funds in aid of work centres and other benefits for tuberculous persons in connexion with the national scheme for the treatment of tuberculosis. The Special Committee on Health Administration in London concurs in these views. The Finance Committee thinks that some increase of expenditure might at first follow the amalgamation of staffs of the Council and the Insurance Committee, though eventual economies would be possible, and the committee is of opinion that there is no reason why the Council should not administer the insurance service as economically as this has been done hitherto. The Local Government Committee of the Council shares these opinions.

Correspondence.

Payments Under the Midwives Acts.

SIR,—Medical practitioners have recently been refused payment for assisting midwives in emergencies by the Devon County Council, on the ground that the accounts for such assistance have not been sent in within two months from the date of the first attendance. Reading Section 2, subsection 2, of the Midwives Act, 1926, with Section 14, subsection 2, of the Midwives Act, 1918, it is a condition of payment of such fees that the accounts must be rendered within two months from the date of the first attendance, and therefore, strictly speaking, the Devon County Council are within their rights as laid down by statute in refusing to consider a claim for fees under the Midwives Acts which is rendered after the two months statutory period.

It [illegible] of this regulation is conveyed to the [illegible], and those who are not familiar with the Midwives Acts are consequently not aware that it is important to render their accounts as soon as possible. Even if there are solid grounds for stringently requiring the early rendering of such accounts it would seem to be only fair that due intimation of this most unusual condition should be communicated to the practitioners concerned.

The matter is not one of interest to the medical profession only, it also concerns the public very seriously, since the result of failure to obtain payment in such circumstances has led medical practitioners to decline to attend cases on the summons of a midwife. It would be very unfortunate if this state of affairs should continue or extend.

—I am, etc.,

HUGH WOODS,
General Secretary, London and Counties Medical Protection Society, Ltd.

May 23rd.

*** A current note bearing on this subject appears at p. 214 this week.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders J. D. Keir to the *Barham*, additional, and as Squadron Medical Officer from date of joining; W. W. D. Chilcott to the *Vivid* for R.N. Barracks, Devonport, and as Specialist in Ophthalmology; F. H. Holl to the *Vivid* for R.N. Barracks, Devonport; R. Willan to the *Excellent*, temporary, and as Specialist in Ophthalmology (amended appointment); B. S. Robson to the *Vivid* for R.M. Infirmary, Plymouth.

Surgeon Lieutenant Commanders K. A. I. Mackenzie to the *Victory*, additional, and for P. and R.T. School, Portsmouth, and as Specialist in P.R.T.; B. S. Collings to the *Revenge*; G. J. M. Kerrigan to the *Impregnable*; J. J. Carroll to the *Tamar*, additional, and for Hong-Kong Dockyard.

Surgeon Lieutenants J. Johnston to the *Dahlia*; R. Burns to the *Adamant*; J. C. Souter to the *Stuart*; L. P. Sayers to the *Benbow*; C. R. Moore to the *Wallace*; J. B. Horan to the *Furious*.

ROYAL ARMY MEDICAL CORPS.

The following Captains to be Majors: C. H. G. Penny (prov.), H. E. P. Yorke, M.C.

Lieutenant (on probation) H. McVicker is confirmed in his rank.

J. D. Dillon to be temporary Lieutenant.

W. F. Cooper to be Lieutenant (on probation).

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader F. E. Johnson to Heliopolis Details.

Flight Lieutenants J. Perry-Evans to No. 208 Squadron, Egypt; F. L. White to No. 2 Armoured Car Company, Palestine; L. C. Palmer-Jones to No. 4 Flying Training School, Egypt.

Flight Lieutenant H. H. R. Bailey relinquishes his temporary commission on completion of service.

Flying Officer R. Thorpe to No. 4 Squadron, South Farnborough.

INDIAN MEDICAL SERVICE.

Lieut.-Colonel W. R. Battye, D.S.O., has resumed charge of the appointment of Administrative Medical Officer in Central India and Residency Surgeon, Indore.

Lieut.-Colonel G. Hutcheson, Officiating Inspector-General of Civil Hospitals and Prisons, Assam, is confirmed in that appointment.

Major-General R. Heard, C.I.E., Lieut.-Colonel C. A. Gourlay, D.S.O., and Major J. G. B. Shand have retired from the service.

COLONIAL MEDICAL SERVICES.

Dr. W. J. D. Innes, Director of Medical and Sanitary Services, Sierra Leone, appointed Director of Medical and Sanitary Services, Gold Coast. Dr. D. D. McCarthy appointed Medical Officer, Zanzibar. Drs. E. A. Trim and N. M. Maclennan appointed Medical Officers, Kenya. Dr. S. G. Harrison appointed Medical Officer, the Gambia. Dr. F. Ross promoted Specialist, Medical Department, Nigeria. Dr. J. C. Cruikshank confirmed in his appointment as Medical Officer, the Gambia. Dr. J. C. S. McDonall, Assistant Director Medical and Sanitary Service, Nigeria, transferred to Sierra Leone.

VACANCIES.

BELFAST: MATER INFIRMORUM HOSPITAL.—Honorary Radiologist.

BIRMINGHAM EDUCATION COMMITTEE.—Assistant School Medical Officer (male). Salary £600 per annum.

BRADFORD CITY.—Assistant School Medical Officer. Salary £600 per annum.

BRISTOL GENERAL HOSPITAL.—Honorary Clinical Assistants.

BRISTOL ROYAL INFIRMARY.—House-Physician. Salary at the rate of £80 per annum.

BURSLEM: HAYWOOD HOSPITAL.—Honorary Radiologist.

CHELSEA HOSPITAL FOR WOMEN, S.W.3.—Junior House-Surgeon (male). Salary at the rate of £100 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—House-Physician (male). Salary at the rate of £100 per annum.

DEVONSHIRE HOSPITAL, Buxton.—Assistant House-Physician. Salary £150 per annum, rising to £175 after three months.

FEDERATED MALAY STATES MEDICAL DEPARTMENT.—Radiologist. Salary £700-£35-£1,120 per annum.

FOOT-AND-MOUTH DISEASE RESEARCH COMMITTEE.—Research Officer. Salary up to £750.

HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—(1) Casualty Surgical Officer at the Out-patient Department. (2) House-Surgeon. Salary in each case at the rate of £100 per annum.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—(1) House-Physician. (2) House-Surgeon. Salary £50 each for six months. (3) Resident Medical Officer (unmarried) at the Branch Hospital, Tadworth Court; salary at the rate of £250 per annum.

KENT AND CANTERBURY HOSPITAL, Canterbury.—Third Resident Medical Officer. Salary £125 per annum.

KENT COUNTY MENTAL HOSPITAL, Chartham, near Canterbury.—Junior (Fourth) Assistant Medical Officer and Pathologist (male). Salary £350 per annum.

LIVERPOOL AND SAMARITAN HOSPITAL FOR WOMEN.—House-Surgeon. Salary at the rate of £100 per annum.

LONDON HOSPITAL, E.—Resident First Assistant to the Gynæcological and Obstetric Department. Salary £300 per annum.

LONDON UNIVERSITY.—University Chair of Pathology tenable at St. Bartholomew's Hospital Medical College. Salary £1,000 a year, together with £500 as Pathologist to the Hospital.

MANCHESTER: ANCOATS HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

MANCHESTER EDUCATION COMMITTEE.—Two Assistant School Medical Officers (males). Salary £600 per annum, rising to £750 each.

MANCHESTER: ROYAL MANCHESTER CHILDREN'S HOSPITAL.—Senior Medical Officer for Out-patient Department (non-resident). Salary £300 per annum.

MIDDLESBROUGH: NORTH RIDING INFIRMARY.—Honorary Anæsthetist.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—Assistant Physician.

NEWARK HOSPITAL.—Resident House-Surgeon (male). Salary £200 per annum.

NEWCASTLE-ON-TYNE CITY MENTAL HOSPITAL, Gosforth, Newcastle-on-Tyne.—Junior Assistant Medical Officer (male). Salary £350 per annum.

NORTH MIDDLESEX HOSPITAL, Edmonton, N.18.—Assistant Medical Officer. Salary £400 per annum.

OXFORD: RADCLIFFE INFIRMARY AND COUNTY HOSPITAL.—(1) House-Surgeon. (2) Obstetric House-Physician. Salary at the rate of £120 per annum each.

QUEEN CHARLOTTE'S MATERNITY HOSPITAL, Marylebone Road, N.W.1.—Assistant Resident Medical Officer. Salary £80 per annum for three months, rising to £100 on appointment as Senior.

QUEEN MARY'S HOSPITAL FOR THE EAST END, Stratford, E.—(1) Honorary Assistant Physician. (2) House-Physician. (3) Two House-Surgeons. (4) Obstetric House-Surgeon. (5) House-Physican and Casualty Officer.

ROCHDALE INFIRMARY.—Junior House-Surgeon (male). Salary £200 per annum.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—Resident Surgical Officer (unmarried). Salary at the rate of £225 per annum.

ROYAL DENTAL HOSPITAL OF LONDON, Leicester Square, W.C.2.—Honorary Pathologist.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.1.—Out-patient Officers. Salary at the rate of £100 per annum.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.7.—Assistant Surgical Officer. Honorarium £75 per annum.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, Waterloo Road, S.E.1.—Honorary Assistant Ophthalmic Surgeon.

SALVATION ARMY (MOTHERS' HOSPITAL), Lower Clapton Road, E.5.—Junior Resident Medical Officer (female). Salary at the rate of £60 per annum.

SEAMEN'S HOSPITAL SOCIETY.—Assistant Medical Officer at King George's Sanatorium for Sailors, Liphook, Hants. Salary at the rate of £200 per annum.

SHEFFIELD: ROYAL INFIRMARY.—House-Surgeon. Salary at the rate of £80 per annum.

SMETHWICK COUNTY BOROUGH.—Assistant Medical Officer of Health (male). Salary £550 per annum (if married, £700 per annum without board and residence).

SOUTH LONDON HOSPITAL FOR WOMEN, South Side, Clapham Common, S.W.4.—Clinical Assistant (woman) to the Ear, Nose, and Throat Department.

SOUTHAMPTON: FREE EYE HOSPITAL.—House-Surgeon. Salary £150 per annum.

SUNDERLAND: MONKWEARMOUTH AND SOUTHWICK HOSPITAL.—Honorary Surgeon.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, Chelsea.—Senior Resident Medical Officer (male). Salary £250 per annum.

WEST DERBY UNION.—Resident Assistant Medical Officer (male) at the Walton Institution, Rice Lane, Liverpool. Salary at the rate of £200 per annum.

WEST HERTS HOSPITAL, Hemel Hempstead.—Resident Medical Officer. Salary £150.

WHICKHAM URBAN DISTRICT COUNCIL.—Medical Officer (lady) of Maternity and Child Welfare Centres. Fee £1 11s. 6d. per session.

WILLESDEN GENERAL HOSPITAL, Harlesden Road, N.W.10.—(1) Honorary Surgeon to Ear, Nose, and Throat Department. (2) Out-patient Clinical Assistants.

WINDSOR: KING EDWARD VII HOSPITAL.—Junior House-Surgeon. Salary at the rate of £100 per annum.

YORK DISPENSARY.—Resident Medical Officer (female). Salary £150 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Canterbury (Kent), Chepstow (Mon.), Tarbert (Argyll), Totnes (Devon). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

MEDICAL REFEREES UNDER THE WORKMEN'S COMPENSATION ACT.—(1) Dumfries County. (2) Districts of Chester, and Nantwich and Crewe County Courts. Applications for (1) to the Private Secretary, Scottish Office, Whitehall, S.W.1, and for (2) to the Private Secretary, Home Office, Whitehall, S.W.1, by June 15th.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

APPOINTMENTS.

WATT, Lily M., M.B., Ch.B.Aberd., D.P.H., Assistant Child Welfare Officer for the county of Durham.

YOUNG, W. Arthur, M.B., B.S.Lond., Professor of Bacteriology to King Edward VII College of Medicine, Singapore.

CERTIFYING FACTORY SURGEONS.—D. Davies, M.R.C.S., L.R.C.P., for the Resolven District (Glamorgan); A. W. McGregor, L.R.C.P. and S.Edin., for the Mauchline District (Ayr).

DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.

Section of Surgery.—3.30 to 5 p.m., Cases. 3.45 p.m., Mr. Wardill: Demonstration of Apparatus for the Estimation of Palatal Incompetence, with especial Reference to Deficiencies of Speech. 5 p.m., Discussion: The Treatment of Cleft Palate by Operation; to be opened by Sir James Berry and Mr. Grey Turner.

Section of Comparative Medicine.—Thurs., 5 p.m., Adjourned Meeting to conclude the Discussion of the Paper by Dr. M. J. Rowlands on Rheumatoid Arthritis—Is it a Deficiency Disease?

Social Evening.—Fri., 8.30 p.m., Reception by the President and Lady Berry. Members of the Inter-State Post-Graduate Assembly of North America will be invited. 9.30 p.m., Address by Dr. G. W. C. Kaye, Superintendent, Physics Department, National Physical Laboratory, Teddington, on X Rays and Some of their Uses.

POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—*Royal Waterloo Hospital.* Mon., 2 p.m., Lecture: Diabetes. *Samaritan Hospital for Women.* Mon., 2 p.m., Clinical Demonstration. Free to members of the medical profession.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Drug Eruptions. Thurs., 5 p.m., Eczema.

NATIONAL HOSPITAL, Queen Square, W.C.1.—Mon., Tues., Thurs., Fri., 2 p.m., Out-patient Clinics. Mon., 12 noon, Pathology of the Nervous System; 3.30 p.m., Spastic Paraplegia. Tues., 3.30 p.m., Neuro-syphilis. Thurs., 3.30 p.m., Encephalitis Lethargica—the Chronic Stage. Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m., Differential Diagnosis in Nervous Diseases. Operations: Tues. and Fri., 10 a.m.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical Skin and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations; 4.30 p.m., Special Demonstration on Selected Cases of Nerve Diseases.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 3.15 p.m., Dyspepsia in Children.

ST. MARY'S HOSPITAL, Institute of Pathology and Research, Paddington, W.2.—Thurs., 5 p.m., Alkalinity of the Blood.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION.—Wed., 3.30 p.m., Visit to the Wellcome Museum of Medical Sciences, Endsleigh Gardens, W.C.1.

CURRENT NOTES.

British Medical Association Library.

The Association's library contains more than 30,000 volumes, including books in all branches of medical literature. It is open on weekdays from 10 a.m. to 6.30 p.m. (Saturdays from 10 a.m. to 2 p.m.). The librarian and his assistant are always ready to help members to find books or references. Besides the facilities afforded to members for consulting monographs, periodicals and works of reference in the library, books in all branches of medical literature and general science can be obtained on loan by members resident in the British Isles, free of charge (other than any postage), from the lending department. The lending facilities include, beside works on medicine, surgery, anatomy, physiology, bacteriology, hygiene, dentistry, obstetrics, and other branches of medical and surgical science, the subjects of astronomy, biology, botany, chemistry, electricity, engineering, geology, microscopy, mining, physics, philosophy, sociology, technology, voyages and travels, zoology, etc. The books issued include latest editions, new books and new editions becoming available on publication. Books can ordinarily be retained for twenty-eight days. Communications as to the library and lending department should be addressed to the Librarian, British Medical Association House, Tavistock Square, London, W.C.1.

The British Medical Association House, Tavistock Square, London.

Help to Individual Members.

The Association is naturally in possession of a very large amount of information on all matters affecting medical practitioners in whatsoever aspect of their professional lives. It is thus often able to help members individually in difficulties of a professional nature, and doing so constitutes a considerable part of its daily work. The medical department alone has some 5,000 files, dealing with all branches of medical activity. The intelligence department, besides assisting in the collecting and recording of information, has a complete supply of press cuttings on matters concerning the profession, and this information, together with that arising in the course of correspondence, is so far as possible filed in such a way as to be readily available for the help of members through the medium of the editorial and medical departments. Inquiries by members, whether through the honorary secretaries of Divisions or Branches or otherwise, on any matter of doubt or difficulty affecting them in their professional capacity are welcomed; such inquiries should be addressed to the Medical Secretary. Expert opinion on income-tax questions as affecting the profession is published in the British Medical Journal. The Solicitor of the Association is consulted when legal matters arise which affect the general interests of the profession.

Scholarships, Grants, and Prizes awarded by the Association.

The sum devoted by the British Medical Association for the encouragement of research has steadily increased during the past few years. The Association's scholarships for the promotion of research into subjects relating to the causation

prevention, or treatment of disease were among the first of their kind, and these scholarships still meet a real need on the part of members of the profession who hold junior appointments and are at the same time prosecuting research. A new prize—the Katherine Bishop Harman Prize—has recently been inaugurated for research on disorders incident to maternity. By the Middlemore Prize original work in ophthalmology is recognized, and the Stewart Prize is gained by contributions made to the study of epidemic disease. The Sir Charles Hastings Prize of 50 guineas has been established in memory of the founder of the British Medical Association for the purpose of stimulating systematic observation, research, and record in general practice; the first award was made in 1926. Of recent years a subject for essays has also been proposed annually to senior medical students, and in connexion with these essays the Association gives annually fourteen prizes of £10 each. Further particulars of any of the above can be obtained on application to the Medical Secretary of the Association.

Handbook for Recently Qualified Medical Practitioners.

The second edition of the Association's *Handbook for Recently Qualified Medical Practitioners* was issued in April of last year. The demand for this guide to the intricacies of medical practice has been so great as to necessitate a reprint, and it is evidently not confined to the newly qualified, for whom the handbook was primarily intended. A special feature of the present edition is the amount of space devoted to the practical aspects of medical work, including the legal and social obligations of the practitioner. The appendices include the *Warning Notices* issued by the General Medical Council, the rules as to ethics of medical consultation approved by the Representative Body of the British Medical Association, and the memorandum on the duties of doctors and dentists under the Dangerous Drugs Acts, 1920-23, issued by the Home Office. The handbook can be obtained on application to the Financial Secretary and Business Manager, price 3s. 8½d. post free. Copies are presented to newly qualified practitioners through the Divisions and Branches.

"Kenya and East African Medical Journal."

With formal recognition by the Tanganyika Branch of the British Medical Association, the *Kenya Medical Journal* has changed its name, and, beginning with the issue of April, 1927, will be published as the *Kenya and East African Medical Journal*. We have referred more than once to the steady growth of this enterprising periodical since its modest appearance four years ago as a typewritten sheet with the title of the *Journal of the Kenya Medical Service* under the editorial direction of its founder, Dr. C. J. Wilson of Nairobi. By April, 1924, it was circulating through Kenya Colony, Uganda, Tanganyika, and Zanzibar, and its name was changed to the *Kenya Medical Journal*. Since then its expansion has been steady, and it has contained various important articles, including reports on sleeping sickness in Uganda, and the mosquito breeding areas of Nairobi. The current issue includes an account by Dr. P. Manson-Bahr of his recent experiences in the diagnosis of liver abscess, and Dr. W. H. Kauntze continues his report of an investigation into the value of polyvalent vaccine in the prophylaxis of bacillary dysentery in East Africa. The *Kenya and East African Medical Journal* is to be congratulated particularly on its valuable work in co-ordinating medical practice in the East African colonies.

The Association and the Ophthalmic Service of the Community.

Two aspects of the present position with regard to the provision of an improved ophthalmic service for the public were under consideration by the appropriate committees last week. On May 23rd the Ophthalmic Subcommittee approved the draft memorandum of evidence for submission by the Association to the Departmental Committee to consider the Optical Practitioners (Registration) Bill. This memorandum was considered by the Ophthalmic Committee on the 27th and approved, with certain amendments, for submission to the Council on June 8th. The Ophthalmic Committee also considered the very difficult question of the provision for ophthalmic benefit as an additional benefit under the National Health Insurance Acts, and formulated certain general principles for submission to the Council as regards the substitution of the clinic system for the present method.

Medical Secretaries' Visits.

On May 25th the Deputy Medical Secretary addressed the senior students at University College Hospital on the choice of a career. The attendance might have been larger, but the address seemed to be appreciated by those who were present. The chair was taken by the Dean of the medical school, Dr. A. M. H. Gray.

Association Notices.

TABLE OF DATES.

June 8, Wed.	*Council.*
June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives.
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BORDER COUNTIES BRANCH: ENGLISH DIVISION.—The annual general meeting of the English Division will be held at the Crown and Mitre Hotel, Carlisle, on Friday, June 17th, at 3.30 p.m. Agenda: Election of office-bearers, 1927-28; proposal of Executive Committee that the Division adopt a resolution under its Ethical Rules in relation to the scale of minimum commencing salaries for public health medical officers. After the conclusion of the business cases will be demonstrated by Dr. Ablett and Dr. Cameron. Tea will be served at 4.30 p.m.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—The annual meeting of the West Dorset Division will take place at the Antelope Hotel, Dorchester, on Thursday, June 16th, at 8.45 p.m. Agenda: Report of Council and instructions to representative; report of honorary secretary for 1926; election of officers, Executive Committee, and representatives on Branch Council. The meeting will be preceded by a supper at the Antelope Hotel at 7.30. Those proposing to attend the supper (5s. per head, exclusive of wines) are asked to notify the honorary secretary, Dr. J. A. Pridham, Hillfield, Broadway, Weymouth, a week beforehand.

EDINBURGH BRANCH.—The annual meeting of the Edinburgh Branch will be held in the Scottish House of the Association, 6, Drumsheugh Gardens, Edinburgh (telephone: Edinburgh 24361), on Wednesday, June 15th, at 3.30 p.m. Tea will be served from 3.15. Business: Report of Branch Council, including the annual reports of Branch and of Divisions; treasurer's annual report and business; election of office-bearers for 1927-28; report of election of representative for 1927-28 for the Edinburgh and Fife Branches to the Council of the Association; election to the annual vacancy on the board of management of the Queen Mary Nursing Home; Annual Meeting of the Association in Edinburgh in July—reception by Branch; any other competent business.

KENT BRANCH.—The fourteenth annual meeting of the Kent Branch will be held at the Spa Hotel, Tunbridge Wells, on Wednesday, June 15th. The Council will meet in the morning. The President-Elect, Dr. F. R. B. Bisshopp, kindly invites each member attending and his wife to luncheon at the Spa Hotel at 2 p.m. Annual meeting, 3 p.m. Agenda: Report of the election of new officers, who thereupon take office; thanks to retiring officers; report of Branch Council and financial statement; appointment of auditor; inaugural address by the President. Garden party by the President and Mrs. Bisshopp at 4 p.m. Annual dinner (morning dress) at Spa Hotel (tickets 7s. 6d. each, exclusive of wines, which will be provided by the Tunbridge Wells Division), 7 p.m. Competition for the [illegible] challenge cup on the Spa Golf Club course. [illegible] hould at once send in their names, address [illegible] F. C. Linton, 6, Earl's Road, Tunbridge Wells, who will give all necessary information. Members intending to be present at the annual meeting are requested to send a postcard to Dr. D. Davies, 8, Lonsdale Gardens, Tunbridge Wells, not later than Saturday, June 11th, stating whether they will attend: (1) The President-Elect's luncheon, and whether alone or

accompanied; (2) the annual meeting; (3) the annual dinner. The Spa Hotel is under a mile from the railway station and has ample accommodation for parking cars.

LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.—The annual general meeting of the Hyde Division will be held in the Hyde Town Hall on Thursday, June 16th, at 4 p.m.

METROPOLITAN COUNTIES BRANCH.—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 21st, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) to sanction the necessary alterations in the rules of the Branch to enable the president-elect to become an *ex-officio* member of all committees; (5) presidential address by Mr. E. B. Turner, F.R.C.S., entitled "Influenza from 1889 to 1927: its therapeutic and clinical aspects."

METROPOLITAN COUNTIES BRANCH: CHELSEA DIVISION.—The annual general meeting of the Chelsea Division will be held in the Fulham Town Hall on Wednesday, June 8th, at 4.15 p.m. Agenda Election of officers and Executive Committee; address by Dr. Wanklyn, small-pox advisor to the London County Council, on the diagnosis of small-pox.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The annual general meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, June 14th, at 9.30 p.m.

METROPOLITAN COUNTIES BRANCH: GREENWICH AND DEPTFORD DIVISION.—The annual general meeting of the Greenwich and Deptford Division will be held at the Town Hall, Deptford, New Cross Road, to-day (Friday, June 3rd), at 3.30 p.m. Agenda: The annual report and financial statement; election of chairman and officers for ensuing year; programme of scientific meetings for the coming year; appeal to all practitioners in the area on behalf of medical charities; Annual Report of Council of the Association.

METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION.—The annual meeting of the Hampstead Division for the election of officers and committee will be held on Thursday, June 9th, at 8.30 p.m.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 14th, at 9 p.m. Mr. J. Paterson, C.B.E., will read a paper on internal haemorrhage.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—The next meeting of the Willesden Division will be held on Tuesday, June 21st, Dr. G. F. Buchan, the medical officer of health, is arranging for a demonstration in connexion with infectious diseases at the Municipal Hospital, Brentfield Road, at 3.30 p.m.

NORTH OF ENGLAND BRANCH: CLEVELAND DIVISION.—The annual general meeting of the Cleveland Division will be held at the Zetland Hotel, Saltburn, on Thursday, June 9th, at 3 p.m. Agenda: Letter from the secretary; statement of accounts: (*a*) annual financial, (*b*) voluntary fund, (c) dance; annual report of the Executive Committee; correspondence; election of representative and officers for 1927-28. Members attending the meeting and desirous of being served with tea should hand in their names to the hotel office on arrival. Tea will be served at 4 o'clock, charge 2s., payable at the time of booking.

NORTH OF ENGLAND BRANCH: TYNESIDE DIVISION.—A golf match has been arranged to take place between the South Shields and Tyneside Divisions on Sunday, July 3rd, at Brancepeth. Lunch, 1 p.m.; singles, 2 p.m.; tea, 5 p.m.; foursomes, 6 p.m. As the object of the meeting is to further social intercourse, it is hoped that all members who have ever wielded a club will do so on this occasion, and that others who do not play will come also.

SOUTH MIDLAND BRANCH: BEDFORDSHIRE DIVISION.—The annual meeting of the Bedfordshire Division will be held at the Swan Hotel, Bedford, on Wednesday, June 15th, at 3 p.m. Dr. Welch invites the members to luncheon at the Swan Hotel at 1.15. Members who wish to accept Dr. Welch's kind invitation are asked to notify the honorary secretary by Monday, June 13th. There will be an Executive Committee meeting in Room 40 previous to the annual meeting. Agenda: Annual report; election of officers. Dr. R. A. Young, F.R.C.P., physician to Middlesex and Brompton Hospitals, will give an address on clinical instinct. Tea will be provided.

SOUTHERN BRANCH.—The fifty-fifth annual meeting of the Southern Branch will be held at Osborne House, East Cowes, Isle of Wight, on Wednesday, June 15th, at 3 p.m., when Major-General Sir S. G. Guise-Moores, K.C.B., C.M.G., will take the chair. Agenda: Correspondence; annual report of the Branch Council; financial statement for 1926; election of officers, 1927-28. At the conclusion of the above business Dr. Herbert French, C.B.E., F.R.C.P., will give an address "Concerning venesection by the needle and bottle method, and a number of other small points." Through the courtesy of the President the State apartments will be open for inspection to members and their ladies, who are invited to tea by Lady Guise-Moores. The management of Osborne Cottage Hotel have generously quoted a special tariff to members of the Branch for those who wish to take this unique opportunity of seeing the Isle of Wight, and it is hoped that many will do so. Members intending to be present are requested to send word to that effect to the honorary secretary (Dr. Lockhart Stephens) not later than June 10th.

SUSSEX BRANCH: BRIGHTON DIVISION.—A clinical meeting of the Brighton Division will be held at the Sussex County Hospital on Thursday, June 16th, at 3.45 p.m.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The annual meeting of the Worcestershire and Herefordshire Branch will be held (by invitation of Dr. J. C. Smyth) at Ashfield, Great Malvern, on Thursday, June 16th, at 3.15 p.m. Agenda: Council's report on the affairs of the Branch and the annual financial statement; election of president, honorary secretary, and treasurer. At the conclusion of the business Mr. Ainslie will vacate the chair and introduce his successor, Dr. Naish. Mr. Ainslie will read a short paper. Dr. J. C. Smyth has very kindly invited the members to tea after the meeting.

YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.—The annual picnic of the Huddersfield Division will take place on Wednesday, June 15th. The char-a-banc will leave York Place at 12.30 p.m. for Malham. Afternoon tea will be served at the Airedale Private Hotel on arrival at Malham about 3 p.m. The afternoon will be spent in and around Malham. Gordale Scar and Malham Cove are both within easy walking distance and there will be time to walk to both. The char-a-banc will leave Malham at 6 p.m. for Skipton, where dinner will be served at the Black Horse Hotel at 7 p.m. The char-a-banc will leave Skipton at 8 p.m., and return via Ilkley to Huddersfield, where the party should arrive about 10 p.m. The inclusive charge for char-a-banc, tea, dinner (exclusive of drinks), and tips will be £1 a head; for those going in their own cars 10s. a head. Arrangements for the dinner must be completed by Saturday, June 11th.

Meetings of Branches and Divisions.

METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

THE annual meeting of the Camberwell Division was held at St. Giles Hospital, Camberwell, on May 24th. The following officers were elected for the ensuing year:

Chairman, Dr. R. Cox. *Vice-Chairman*, Mr. E. W. G. Masterman. *Honorary Secretary*, Dr. J. C. Evans. *Representative in Representative Body*, Mr. Masterman.

Mr. MASTERMAN gave an address on an archaeological journey through Palestine, and showed a very interesting and beautiful series of lantern slides. His address was listened to with much pleasure by the members and also by the considerable number of ladies who were present as guests. The meeting closed with a unanimous and hearty vote of thanks to Mr. Masterman.

DORSET AND WEST HANTS BRANCH.

THE annual meeting of the Dorset and West Hants Branch was held at the Haven Hotel, Poole, on May 18th, fifty-four members attending.

The following officers nominated in October were appointed:

President, Dr. Grey-Edwards. *Retiring President*, Dr. Unwin. *Vice-Presidents*, Dr. Morse and Dr. Oliphant. *Honorary Treasurer*, Dr. Grey-Edwards. *Honorary Secretary*, Dr. McCall.

The SECRETARY of the Branch read the annual report of the Branch, together with those of the Bournemouth and Dorset Divisions. Each showed a very satisfactory increase in their membership.

It was resolved to hold the next meeting at Weymouth, on Wednesday, July 6th.

The PRESIDENT read a paper on medical practice in the days of Smollett, which proved of great interest to members. Dr. MAHOMED read a paper on vitelligo and its pathology. A discussion followed.

Before the meeting the Poole members entertained visiting members to lunch, and after the meeting Dr. Grey-Edwards acted as host at tea.

SOUTH-WESTERN BRANCH: PLYMOUTH DIVISION.

AT a largely attended meeting of the local profession arranged by the Plymouth Division the hospital policy of the Association was discussed. This had been previously considered by a Hospitals Subcommittee, who recommended the following, and they were approved unanimously or by large majorities.

1. That there should be adequate official representation of the honorary medical and surgical staffs on the managing committees of all hospitals.
2. That there was urgent need for a competent almoner at all hospitals in all cases.
3. That the "income limits" for all hospital patients be reduced by £50 per year for all classes.
4. That in the investigation of the financial positions of all patients the capital value of property held by them should be disclosed.
5. That for the time being the contributors to the 1d. in the £ scheme be not considered as tariff patients.
6. That as the money paid to the hospitals by contributory schemes is only for full or partial maintenance of in-patients, the members as such are not entitled as a right to treatment either as in- or out-patients.
7. That all minor operations (such as are ordinarily done in the out-patient department) be excluded from the contributory scheme, and that the honorary staffs be asked to refuse to do any minor operations without the direct and personally written letter of the ordinary medical attendant of the patient.
8. That the remainder of the hospital policy be approved.

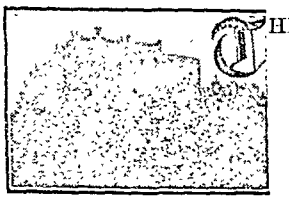
Several examples were given of gross abuse of hospitals by people who could afford to pay for private attendance, of the largely increasing use of the out-patient department for minor operations, of the income limit being too high, of the unfair pressure experienced by medical men to sign "contributory" certificates, of the very inadequate investigation by existing almoners, and of the growing tendency of municipal officers to encroach on the field of private practice.

British Medical Association.

NINETY-FIFTH ANNUAL MEETING, EDINBURGH, JULY, 1927.

Patron: HIS MAJESTY THE KING.

President: R. G. HOGARTH, C.B.E., F.R.C.S., Senior Surgeon, General Hospital, Nottingham.



President-Elect: SIR ROBERT W. PHILIP, M.D., LL.D., F.R.C.P.Ed., Consulting Physician, Royal Infirmary, Edinburgh.

Chairman of Representative Body: H. B. BRACKENBURY, M.R.C.S., L.R.C.P.

Chairman of Council: SIR ROBERT BOLAM, M.D., LL.D., F.R.C.P.

Treasurer: N. BISHOP HARMAN, M.B., F.R.C.S.

PROVISIONAL PROGRAMME.

Edinburgh Castle.

THE incoming President, Sir ROBERT PHILIP, will deliver his Address to the Association on Tuesday, July 19th, at 8 p.m.

The ANNUAL REPRESENTATIVE MEETING will begin on Friday, July 15th, at 10 a.m., and be continued on the three following week-days. The Representatives' Dinner will take place at the University Union on Friday evening, July 15th, at 7.30 p.m.

The statutory ANNUAL GENERAL MEETING will be held on Tuesday, July 19th, at 2 p.m., and the adjourned general meeting at 8 p.m.

The Annual Dinner of the Association will take place on the evening of Thursday, July 21st, at 7.15 p.m.

The Conference of Honorary Secretaries will be held at 2.30 p.m. on Wednesday, July 20th, and the Secretaries' Dinner at 6.30 the same evening.

The official Religious Service will be held in St. Giles's Cathedral on Tuesday, July 19th, at 4.30 p.m.

The Annual Exhibition of surgical appliances, foods, drugs, and books, to be held in the Waverley Market, Princes Street, Edinburgh, will be open for inspection on Monday, July 18th, from 2 till 6 p.m.; the formal opening by the President will take place on July 19th at 9.30 a.m. The exhibition will remain open on July 20th, 21st, and 22nd from 9 a.m. to 6 p.m.

A Centenary Celebration commemorative of the birth of Lord Lister, presided over by the Earl of Balfour, K.G., will take place on the evening of Wednesday, July 20th, at 8 o'clock, in the McEwan Hall, when short addresses will be given by Sir W. Watson Cheyne, Bt., Professor Tuffier of Paris, Professor Harvey Cushing of Harvard University, and Dr. James Stewart of Halifax, Nova Scotia. During the week of the Annual Meeting a museum containing relics of Lister's life and work will be displayed in the Upper Library of the Old University. A *Lister Memorial Volume* has been prepared, and a copy will be given to each member of the Association who registers in the Reception Room.

Saturday, July 23rd, will be given to excursions to places of interest in the neighbourhood of Edinburgh.

THE SECTIONS.

The Scientific Sections will meet from 10 a.m. to 1 p.m. for papers and discussions on Wednesday, Thursday, and Friday, July 20th, 21st, and 22nd.

The following Sections will meet on Three Days.

MEDICINE.

President: Professor G. LOVELL GULLAND, C.M.G., M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: Professor J. HILL ABRAM, M.D., F.R.C.P. (Liverpool); R. A. FLEMING, M.D., F.R.C.P.Ed. (Edinburgh); H. MORLEY FLETCHER, M.D., F.R.C.P. (London); W. T. RITCHIE, O.B.E., M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: GEORGE GRAHAM, M.D., F.R.C.P., 1, Devonshire Place, London, W.1; G. D. MATHEWSON, M.B., F.R.C.P.Ed., 28A, Moray Place, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Results of Insulin Therapy in Diabetes Mellitus. To be opened by Professor HUGH MACLEAN (London), followed by Dr. GEORGE GRAHAM (London) and Professor D. MURRAY LYON (Edinburgh).

Thursday, July 21st.—Discussion: The Treatment of Acute Lobar Pneumonia. To be opened by Professor JOHN HAY (Liverpool), followed by Dr. H. MORLEY FLETCHER (London) and Dr. A. FERGUS HEWAT (Edinburgh).

Friday, July 22nd.—Discussion: The Pathology and Treatment of Pernicious Anaemia. To be opened by Professor G. LOVELL GULLAND (Edinburgh), followed by Dr. ARTHUR F. HURST (Ascot).

SURGERY.

President: Professor D. P. D. WILKIE, O.B.E., M.D., Ch.M., F.R.C.S. (Edinburgh).

Vice-Presidents: J. W. DOWDEN, C.M., F.R.C.S.Ed. (Edinburgh); F. J. STEWART, M.S., F.R.C.S. (London); J. W. STRUTHERS, F.R.C.S.Ed. (Edinburgh); H. WADE, C.M.G., D.S.O., F.R.C.S.Ed. (Edinburgh); A. M. WEBBER, M.S., F.R.C.S. (Nottingham).

Honorary Secretaries: J. M. GRAHAM, Ch.M., F.R.C.S.Ed., 8, Manor Place, Edinburgh; E. C. HUGHES, O.B.E., M.Ch., F.R.C.S., 17, Wimpole Street, London, W.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Tuberculosis of the Kidney. To be opened by Sir JOHN THOMSON-WALKER (London), followed by Dr. ROLLIER (Leysin), Professor A. FULLERTON (Belfast), and Mr. HENRY WADE (Edinburgh).

Thursday, July 21st.—Discussion: The Place of Surgery in the Treatment of Toxic Goitre. To be opened by Mr. T. P. DUNHILL (London), followed by Professor G. R. MURRAY (Manchester) and Mr. C. THURSTAN HOLLAND (Liverpool).

Paper: Sir ALMROTH E. WRIGHT (London), The Rational Treatment of Infected Wounds.

Friday, July 22nd.—Discussion: Chronic Appendicitis. To be opened by Mr. WILFRED TROTTER (London), followed by Mr. J. W. DOWDEN (Edinburgh), Mr. VICTOR BONNEY (London), and Mr. A. J. WALTON (London).

Paper: Mr. A. McLENNAN (Glasgow), Burns.

OBSTETRICS AND GYNAECOLOGY.

President: JAMES HAIG FERGUSON, M.D., C.M., F.R.C.P.Ed., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: T. WATTS EDEN, M.D., F.R.C.P., F.R.C.S.Ed. (London); GIBBON FITZGIBBON, M.D., F.R.C.P.I. (Dublin); WILLIAM FORDYCE, M.D., F.R.C.P.Ed. (Edinburgh); Professor R. W. JOHNSTONE, C.B.E., M.D., F.R.C.S.Ed. (Edinburgh); Mrs. ETHEL VAUGHAN-SAWYER, M.D. (London).

Honoraries Secretaries: DANIEL DOUGAL, *M.C.*, M.D., 11, St. John Street, Manchester; W. F. T. HAULTAIN, O.B.E., *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 6, Walker Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Relation of Pregnancy to General Diseases. To be opened by Professor J. M. MUNRO KERR (Glasgow) Cardiac Diseases, Dr. E. RIST (Paris) Tuberculosis, and Professor F. J. BROWNE (London) Venereal Diseases, followed by Dr. J. S. FAIRBAIRN (London), Dr. G. FITZGIBBON (Dublin), and Dr. MARY H. J. MACNICOL (Edinburgh).

Thursday, July 21st.—Discussion: The Hygiene of Menstruation in Adolescents. To be opened by Professor R. W. JOHNSTONE (Edinburgh), Dr. J. HUNTER P. PATON (St. Andrews), and Mrs. A. E. SANDERSON CLOW (Cheltenham), followed by Mrs. E. VAUGHAN-SAWYER (London).

Friday, July 22nd.—Papers: Dr. F. A. E. CREW (Edinburgh), The Effect upon the Sex Ratio of Conception Early and Late in Relation to the Oestrous Cycle of the Rat; D[illegible] (Edinburgh), Failed Forceps Cases; Dr. [illegible] (Chester), [illegible] Clinical Pathology of Pelvic [illegible]; Dr. [illegible] SHAW (Manchester), Uterine Fibroids after the Menopause.

PATHOLOGY AND BACTERIOLOGY.

President: Professor J. LORRAIN SMITH, M.D., F.R.S., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: J. W. DAWSON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); W. R. LOGAN, M.D., F.R.C.P.Ed. (Edinburgh); Professor T. J. MACKIE, M.D., D.P.H. (Edinburgh); H. D. WRIGHT, M.D., M.R.C.P.Ed. (London).

Honorary Secretaries: JAMES DAVIDSON, M.B., Ch.B., Pathological Department, University of Edinburgh; H. J. PARISH, M.D., M.R.C.P.Ed., D.P.H., Wellcome Physiological Research Laboratories, Langley Court, Beckenham, Kent.

The following provisional programme has been arranged

Wednesday, July 20th.—Discussion: Growth in Its Pathological Relations. To be opened by Dr. ARCHIBALD LEITCH (London), followed by Professor R. MUIR (Glasgow), Dr. G. W. DE P. NICHOLSON (London), Professor J. SHAW DUNN (Manchester), Professor M. J. STEWART (Leeds), and Professor E. H. KETTLE (Cardiff).

Thursday, July 21st.—(Joint meeting with Section of Comparative Medicine). Discussion: Immunity. To be opened by Dr. R. A. O'BRIEN (Beckenham), and Professor CARL H. BROWNING (Glasgow), followed by Professor R. MUIR (Glasgow), Dr. HEDLEY D. WRIGHT (London), Colonel W. F. HARVEY (Edinburgh), Professor T. J. MACKIE (Edinburgh).

Friday, July 22nd.—(*Joint meeting with Section of Comparative Medicine*). Discussion: Aspects and Problems of Comparative Medicine. To be opened by Dr. THEOBALD SMITH (Princeton, N.J.) and Professor BASIL BUXTON (Cambridge), followed by Major G. W. DUNKIN (London), Mr. W. H. ANDREWS (Ministry of Agriculture), Dr. F. A. E. CREW (Edinburgh), Dr. H. H. SCOTT (London), Professor R. T. LEIPER (London), Mr. J. W. BRITTLEBANK, P.R.C.V.S. (London), Mr. ARTHUR GOFTON (Edinburgh), Mr. T. W. M. CAMERON (London), and Mr. JAMES MCALLAN, (Aberdeen).

THERAPEUTICS AND PHARMACOLOGY.

President: Professor J. A. GUNN, M.D., D.Sc. (Oxford).

Vice-Presidents: Professor A. J. CLARK, *M.C.*, M.D., F.R.C.P. (Edinburgh); Professor FRANCIS R. FRASER, M.D., F.R.C.P. (London); E. P. POULTON, M.D., F.R.C.P. (London).

Honorary Secretaries: E. G. HOLMES, M.B., B.Chir., Pharmacological Laboratory, Cambridge; G. G. LAMBIE, *M.C.*, M.B. F.R.C.P.Ed., 31, Drumsheugh Gardens, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. to 12 noon. Discussion: Clinical Methods of Administration and Therapeutic Uses of Oxygen. To be opened by Dr. E. P. POULTON (London), followed by Dr. H. WHITRIDGE DAVIES (Leeds) and Dr. W. T. RITCHIE (Edinburgh). 12 noon to 1 p.m. Paper: Professor J. A. GUNN (Oxford), Expectorants.

Thursday, July 21st.—Discussion: The Therapeutic Uses of Calcium Salts. To be opened by Professor F. R. FRASER (London), followed by Dr. L. G. PARSONS (Birmingham), Mr. C. P. STEWART (Edinburgh) Biochemical Aspect, Dr. G. H. PERCIVAL (Edinburgh) Pharmacological and Therapeutic Aspect, Professor L. BLUM (Strasbourg), Dr. G. C. LINDER (London) Tetany, and Dr. N. F. C. BURGESS (London).

Friday, July 22nd.—Discussion: The Action and Uses of Ovarian Extracts. To be opened by Professor W. E. DIXON (Cambridge), followed by Dr. KATHERINE A. COWARD (*London*) *Standardization*, Mr. A. S. PARKES (London) Physiological, Dr. W. R. ADDIS (Manchester) Clinical, and Professor J. M. MUNRO KERR (Glasgow) Gynaecological.

DISEASES OF CHILDREN.

President: Professor JOHN FRASER, *M.C.*, M.D., Ch.M., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: H. CHARLES CAMERON, M.D., F.R.C.P. (London); ALEXANDER DINGWALL FORDYCE, M.D., F.R.C.P.Ed. (Liverpool); CHARLES MCNEIL, M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: Miss HELEN M. M. MACKAY, M.D., 28, John Street, Bedford Row, London, W.C.1; LEWIS THATCHER, M.D., F.R.C.P.Ed., 8, Melville Crescent, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Acute Pneumonia in Early Childhood. To be opened by Dr. CHARLES MCNEIL (Edinburgh) and Dr. AGNES R. MACGREGOR (Edinburgh) conjointly, followed by Professor LEONARD FINDLAY (Glasgow), Dr. J. HUGH THURSFIELD (London), Colonel W. GLEN LISTON (Edinburgh), and Dr. NORMAN S. CARMICHAEL (Edinburgh).

Afternoon.—Demonstration: Dr. W. A. ALEXANDER (Edinburgh), Acute Pulmonary Conditions in Childhood, illustrated by specimens, *x*-ray prints, large sections, and microscopic preparations.

Surgical Demonstration at Royal Edinburgh Hospital for Sick Children.

Thursday, July 21st.—Discussion: Acute Intestinal Obstruction in Infancy and Childhood. To be opened by Mr. ALEX. MACLENNAN (Glasgow), followed by Mr. L. E. BARRINGTON WARD (London), Miss G. M. A. HERZFELD (Edinburgh), Mr. F. C. PYBUS (Newcastle-on-Tyne), and Mr. NORMAN M. DOTT (Edinburgh).

Afternoon.—Demonstration of Medical Cases at Royal Edinburgh Hospital for Sick Children.

Friday, July 22nd.—Discussion: Therapeutic Modification of the Diet in Infancy: what can be achieved by it? To be opened by Dr. H. C. CAMERON (London), followed by Dr. A. DINGWALL FORDYCE (Liverpool), Dr. G. B. FLEMING (Glasgow), and Dr. LEWIS THATCHER (Edinburgh).

MENTAL DISEASES.

President: Professor GEORGE M. ROBERTSON, M.D., P.R.C.P.Ed. (Edinburgh).

Vice-Presidents: BERNARD HART, M.D., F.R.C.P. (London); JOHN KEAY, C.B.E., M.D., F.R.C.P.Ed. (Bangour); J. R. LORD, C.B.E., M.D., F.R.C.P.Ed. (Epsom); H. C. MARR, M.D., F.R.F.P.S.Glas. (Edinburgh).

Honorary Secretaries: R. D. GILLESPIE, M.D., 152, Harley Street, London, W.1; W. M. MCALISTER, M.B., Ch.B., M.R.C.P.Ed., 151, Morningside Drive, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Chronic Sepsis as a Cause of Mental Disorder. To be opened by Dr. WILLIAM HUNTER, C.B. (London), followed by Sir BERKELEY MOYNIHAN, K.C.M.G., C.B. (Leeds), Dr. D. CHALMERS WATSON (Edinburgh), Dr. E. GOODALL (Whitchurch), Dr. C. H. BOND (Brighton), and Dr. W. F. MENZIES (Cheddleton).

Thursday, July 21st.—Joint meeting with the Section of Neurology. Discussion: Epidemic Encephalitis. To be opened by Dr. IVY MACKENZIE (Glasgow), Epidemiological Considerations; Dr. J. GODWIN GREENFIELD (London), Pathology; Dr. R. M. MARSHALL (Glasgow), Mental Aspects; and Dr. G. RIDDOCH (London), Chronic Encephalitis; followed by Dr. E. MAPOTHER (London), Dr. H. DEVINE (Virginia Water), and Dr. W. J. ADIE (London).

Friday, July 22nd.—Discussion: *Points in the Lunacy Commission* (England) Report—(*a*) Are the existing safeguards against wrongful detention adequate? (*b*) How far is judicial intervention necessary in the process of certification? (*c*) What additional facilities are required for early treatment? To be opened by Professor GEORGE M. ROBERTSON (Edinburgh).

The following Sections will meet on Two Days.

NEUROLOGY.

President: Professor EDWIN BRAMWELL, M.D., F.R.C.P. (Edinburgh).

Vice-Presidents: ALEX. NINIAN BRUCE, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); J. GODWIN GREENFIELD, M.D., F.R.C.P. (London); F. M. R. WALSHE, Q.B.E., M.D., D.Sc., F.R.C.P. (London).

Honorary Secretaries: E. A. CARMICHAEL, M.B., Ch.B., F.R.C.P.Ed., National Hospital, Queen Square, London, W.C.1; NORMAN M. DOTT, M.B., F.R.C.S.Ed., 8, Grosvenor Crescent, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Tics and Allied Conditions. To be opened by Dr. S. A. KINNIER WILSON (London), followed by Professor GUILLAIN (Paris), Dr. A. F. HURST (Ascot), Dr. A. STANLEY BARNES (Birmingham), Dr. T. GRAINGER STEWART (London), Dr. DONALD E. CORE (Manchester), Dr. R. G. GORDON (Bath), and Dr. W. J. ADIE (London).

Thursday, July 21st.—Joint meeting with Section of Mental Diseases. Discussion: Epidemic Encephalitis. To be opened by Dr. IVY MACKENZIE (Glasgow), [illegible] siderations; Dr. J. GODWIN GREENFIELD Dr. R. M. MARSHALL (Glasgow), Mental [illegible] G. RIDDOCH (London), Chronic Encephalitis; followed by Dr. E. MAPOTHER (London), Dr. H. DEVINE (Virginia Water), and Dr. W. J. ADIE (London).

OPHTHALMOLOGY.

President: A. H. H. SINCLAIR, M.D., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: WILFRED ALLPORT, M.B., F.R.C.S.Ed. (Birmingham); Sir ARNOLD LAWSON, K.B.E., F.R.C.S. (London); H. M. TRAQUAIR, [illegible] (Edinburgh).

Honorary [illegible] CKERTON, D.S.O., M.B., Ch.B., 33, Portland E. H. CAMERON, M.B., Ch.B., F.R.C.S.Ed., 7, Darnaway Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. Discussion: Optic Neuritis. To be opened by Dr. J. V. PATERSON (Edinburgh), followed by Dr. HENNING RÖNNE (Copenhagen) and Dr. A. J. BALLANTYNE (Glasgow).

Thursday, July 21st.—10 a.m. Papers: Miss I. C. MANN (London), Some Aspects of the Comparative Development of the Retina; Sir W. T. LISTER (London), Some Points in Connexion with Detachment of the Retina; Mr. W. CLARK SOUTER (Aberdeen), Spontaneous Reattachment of Detached Retina; Sir ARNOLD LAWSON (London), Value of Antiseptics in Modern Ophthalmic Surgery; Mr. F. HOLT DIGGLE (Manchester), Relationship between Lacrymal Obstruction and Nasal Disease; Mr. H. M. TRAQUAIR (Edinburgh), Incidence of Tobacco Amblyopia in Edinburgh and District; Mr. A. H. H. SINCLAIR (Edinburgh), Remarks on Intracapsular Extraction of Cataract, and Demonstration.

LARYNGOLOGY AND OTOLOGY.

President: A. LOGAN TURNER, M.D., P.R.C.S.Ed. (Edinburgh).

Vice-Presidents: J. S. FRASER, M.B., F.R.C.S.Ed. (Edinburgh); W. M. MOLLISON, C.B.E., M.Chir., F.R.C.S. (London); DONALD R. PATERSON, M.D.Ed., F.R.C.P. (Cardiff).

Honorary Secretaries: A. R. DINGLEY, F.R.C.S., 47, Queen Anne Street, London, W.1; W. T. GARDINER, *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 18, Chester Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Neurological and Mechanical Factors underlying Immobility of the Vocal Cords; their diagnosis, prognosis, and principles of treatment. It will be opened by Dr. A. BROWN KELLY (Glasgow), neurological aspect, and Mr. HERBERT TILLEY (London), mechanical side.

Thursday, July 21st.—Discussion: Otosclerosis. To be opened by Mr. G. J. JENKINS (London), followed by Professor F. R. NAGER (Zurich) and Dr. A. A. GRAY (Glasgow). The discussion will be illustrated by microscopical sections showing the changes in the ear in otosclerosis.

Papers: Mr. NORMAN PATTERSON (London), *Some Diseases Affecting the Thyro-glossal Tract*; Dr. STEPHEN YOUNG (Glasgow), Radiography in Mastoid Disease.

PREVENTIVE MEDICINE.

President: Professor P. S. LELEAN, C.B., C.M.G., F.R.C.S., D.P.H. (Edinburgh).

Vice-Presidents: G. F. BUCHAN, M.D., D.P.H. (London); Miss HARRIETTE CHICK, D.Sc. (London); A. M. HEWAT, M.D., D.P.H. (London); G. R. LEIGHTON, O.B.E., M.D., D.Sc. (Edinburgh).

Honorary Secretaries: W. T. BENSON, B.Sc., M.D., D.P.H., M.R.C.P.Ed., City Hospital, Comiston Road, Edinburgh; C. W. HUTT, M.D., D.P.H., Council Offices, 197, High Holborn, London, W.C.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. Discussion: Should all Public Health Administration—Municipal, School, Factory, etc.—be Concentrated under a Single Department, and the Immediate Control in Each Executive Area be Vested in a Single Individual? To be opened by Dr. A. S. M. MACGREGOR (M.O.H. Glasgow), followed by Dr. E. W. HOPE (Liverpool), Dr. J. H. MEIKLE (Medical Officer, Edinburgh School Board), and Professor E. L. COLLIS (Cardiff).

3 to 4 p.m. Demonstration at City Hospital, Comiston Road, Edinburgh, on The Schick and Dick Tests, and Methods of Immunization against Diphtheria and Scarlet Fever.

Thursday, July 21st.—10 a.m. Discussion: What Duties has the State in Relation to the Nation's Food Supply regarding Research, Instruction of Parents, Maintenance of Supplies, and Cooking Facilities? To be opened by Professor EDWARD MELLANBY (Sheffield), followed by Dr. EUSTACE HILL (M.O.H. County of Durham), Dr. J. P. KINLOCH (M.O.H. Aberdeen), and Mr. G. BENZIE (Motherwell).

12 noon. Paper: Pulmonary Asbestosis (with lantern slides), by Dr. W. E. COOKE (Wigan), Sir THOMAS OLIVER (Newcastle-on-Tyne), and Professor STUART MCDONALD (Newcastle-on-Tyne).

2 to 4 p.m. Demonstration: Exhibits in the Museum at the Usher Institute of Public Health, with a special demonstration on food viewed from the popular standpoint.

PHYSIOLOGY AND BIOCHEMISTRY.

President: Professor Sir EDWARD SHARPEY-SCHAFER, M.D., LL.D., D.Sc., F.R.S. (Edinburgh).

Vice-Presidents: Professor P. T. HERRING, M.D., F.R.C.P.Ed. (St. Andrews); Professor D. MURRAY LYON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); Professor JOHN MELLANBY, M.D. (London); Professor T. H. MILROY, M.D. (Belfast); Professor JOHN TAIT, M.D., D.Sc. (Montreal).

Honorary Secretaries: Professor B. A. MCSWINEY, M.B., B.Ch., School of Medicine, Leeds; Miss MAY LAURIE WALKER, B.Sc., M.B., Ch.B., Department of Physiology, University of Edinburgh.

The following provisional programme has been arranged

Thursday, July 21st.—Morning session. Discussion: The Structure and Function of the Spleen. To be opened by Professor JOHN TAIT (Montreal), followed by Professor J. BARCROFT, F.R.S. (Cambridge), and others. Papers: Professor P. T. HERRING (St. Andrews), The Pineal Gland; Professor D. MURRAY LYON and Mr. W. ROBSON, D.Sc. (Edinburgh), Cystinuria; Dr. J. CRIGHTON BRAMWELL (Manchester), Form of the Pulse Wave; Dr. J. H. CRAWFORD (Edinburgh), Water Balance in the Human Subject following the Oral Administration of Saline.

Afternoon session. Discussion: The Influence of Internal Secretions on Sex Characters. To be opened by Dr. F. A. E. CREW (Edinburgh), followed by Mr. A. S. PARKES, D.Sc. (London) and others.

Friday, July 22nd.—Morning session. Discussion: Chemical Changes accompanying Muscular Activity. To be opened by Professor T. H. MILROY (Belfast), followed by Sir F. GOWLAND HOPKINS (Cambridge), Professors O. MEYERHOF (Berlin) and G. EMBDEN (Frankfürt). Papers: Professor J. MELLANBY (London), Bile as the Alimentary Stimulus for Pancreatic Secretion; Professor J. TAIT (Montreal), Natural Arrest of Haemorrhage from a Wound—illustrated with lantern slides; Professor B. A. MCSWINEY and Dr. H. WHITRIDGE DAVIES (Leeds), Circulation Rate; Professor R. J. S. MCDOWALL (London), Physiological Considerations in High Blood Pressure; Dr. C. R. HARINGTON, Ph.D. (London), The Constitution of Thyroxin.

Afternoon session. Discussion: Haemolysis. To be opened by Dr. ERIC H. PONDER (Edinburgh), followed by Professor J. MELLANBY, Dr. R. BRINKMAN (Groningen), and others.

COMPARATIVE MEDICINE.

President: Principal O. CHARNOCK BRADLEY, M.D., D.Sc., F.R.C.V.S. (Edinburgh).

Vice-Presidents: Professor J. B. BUXTON, M.A., F.R.C.V.S. (Cambridge); F. A. E. CREW, M.D., D.Sc. (Edinburgh); Major G. W. DUNKIN, M.R.C.V.S. (London).

Honorary Secretaries: T. W. M. CAMERON, Ph.D., B.Sc., M.R.C.V.S., London School of Hygiene and Tropical Medicine, 23, Endsleigh Gardens, London, W.C.1; J. RUSSELL GRIEG, M.R.C.V.S., Royal (Dick) Veterinary College, Edinburgh.

The following provisional programme has been arranged:

Thursday, July 21st.—(Joint meeting with Section of Pathology and Bacteriology). Discussion: Immunity. To be opened by Dr. R. A. O'BRIEN (Beckenham) and Professor CARL H. BROWNING (Glasgow), followed by Professor R. MUIR (Glasgow), Dr. HEDLEY D. WRIGHT (London), Colonel W. F. HARVEY (Edinburgh), and Professor T. J. MACKIE (Edinburgh).

Friday, July 22nd.—(Joint meeting with Section of Pathology and Bacteriology). Discussion: Aspects and Problems of Comparative Medicine. To be opened by Dr. THEOBALD SMITH (Princeton, N.J.) and Professor BASIL BUXTON (Cambridge), followed by Major G. W. DUNKIN (London), Dr. W. H. ANDREWS (Ministry of Agriculture), Dr. F. A. E. CREW (Edinburgh), Dr. H. H. SCOTT (London), Professor LEIPER (London), Mr. J. W. BRITTLEBANK (London), Mr. ARTHUR GOFTON (Edinburgh), Mr. T. W. M. CAMERON (London), and Mr. JAMES MCALLAN (Aberdeen).

The following Sections will meet on One Day.

DERMATOLOGY.

President: ROBERT CRANSTON LOW, M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: W. HERBERT BROWN, M.D. (Glasgow); H. D. HALDIN-DAVIS, M.D., F.R.C.S. (London).

Honorary Secretaries: ROBERT AITKEN, M.D., F.R.C.P.Ed., 8, Palmerston Place, Edinburgh; F. D. HOWITT, M.D., 87, Harley Street, London, W.1.

The following provisional programme has been arranged:

Thursday, July 21st.—Discussion: The Uses and Limitations of Ultra-violet Radiations in Dermatology. To be opened by Dr. S. E. DORE (London).

Papers: Dr. H. C. G. SEMON (London), The Value of Kryolgan in Lupus Erythematosus; Dr. G. B. DOWLING (London), The Treatment of Tinea Capitis with Thallium Acetate.

TROPICAL DISEASES.

President: ANDREW BALFOUR, C.B., C.M.G., M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: Lieut.-Colonel E. D. W. GREIG, C.I.E., M.D., D.Sc., F.R.C.P.Ed. [illegible] lonel W. F. HARVEY, C.I.E., M.D., C.M. Lieut.-Colonel W. GLEN LISTON, C.I.E., M.D., [illegible] F.R.C.P.Ed. (Edinburgh); Lieut.-Colonel W. P. MACARTHUR, D.S.O., O.B.E., M.D., F.R.C.P.I., D.P.H. (London).

Honorary Secretaries: A. R. D. ADAMS, M.B., Ch.B., D.T.M., School of Tropical Medicine, University of Liverpool; J. F. C. HASLAM, *M.C.*, M.B., M.R.C.P.Ed., D.P.H., Bureau of Hygiene and Tropical Diseases, 23, Endsleigh Gardens, London, W.C.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 to 11 a.m. Discussions: (1) Amoebic Dysentery. To be opened by Professor WARRINGTON YORKE (Liverpool), followed by Dr. P. H. MANSON-BAHR (London) (Treatment and Epidiascopic Illustrations of Sigmoidoscope Appearances).

11 a.m. to 1 p.m. (2) Some Problems of Malaria Prophylaxis. To be opened by Lieut.-Colonel S. P. JAMES (Ministry of Health).

Afternoon. Museum Demonstration. Professor W. YORKE and Dr. A. R. D. ADAMS, Amoebic Dysentery. There will also be a demonstration of material lent by Professor W. S. PATTON (Liverpool).

FORENSIC MEDICINE.

President: Professor H. HARVEY LITTLEJOHN, M.B., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: The Right Hon. Earl RUSSELL (London); Sir WALTER SCHRODER, K.B.E. (London); Professor SYDNEY A. SMITH, M.D., D.P.H. (Cairo).

Honorary Secretaries: D. J. A. KERR, M.B., Ch.B., D.P.H., M.R.C.P.Ed., Forensic Medicine Department, University, Teviot Place, Edinburgh; Professor J. E. W. MCFALL, M.D., D.P.H., 15, Green Lane, Stoneycroft, Liverpool.

The following provisional programme has been arranged:

Thursday, July 21st.—Discussions: (1) Alcohol and the Motorist. To be opened by Dr. G. CARTER (Sheffield). (2) The Police Surgeon in Relation to Forensic Medicine. To be opened by Professor J. GLAISTER (Glasgow).

Demonstrations: In connexion with the Section arrangements are being made for a demonstration of the museum of the Forensic Medicine Department, Edinburgh University, and of subjects of special medico-legal interest.

TUBERCULOSIS.

President: S. VERE PEARSON, M.D. (Mundesley).

Vice-Presidents: WILLIAM BRAND, M.B., C.M. (London); A. DE W. SNOWDEN, M.D., C.B.E. (Ringwood, Hants); ERNEST WATT, M.D., D.Sc., M.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: J. C. SIMPSON, *M.C.*, M.B., Ch.B., D.P.H., Southfield Sanatorium Colony, Liberton, Edinburgh; R. R. TRAIL, *M.C.*, M.D., King Edward VII Sanatorium, Midhurst.

The following provisional programme has been arranged:

Friday, July 22nd.—10 a.m. Discussions: (1) Radiology and [illegible] Tuberculosis from the Point of View [illegible]. To be opened by Mr. H. MORRISTON [illegible] atorium, North Wales), followed by Dr. E. RIST (Paris), Dr. J. LOGAN STEWAR[illegible] J. M. WOODBURN MORISON (Edinburgh) [illegible] Tuberculosis of Childhood and Its Bearin[illegible] be opened by Professor EUGENE L. OPIE ([illegible] followed by Dr. R. G. CANTI (London) a[illegible] DELILLE (Paris). (3) Interrelation of Physician and Surgeon in Regard to Non-pulmonary Tuberculosis. To be opened by Dr. D. A. POWELL (Cardiff) and Professor JOHN FRASER (Edinburgh), followed by Dr. G. H. GIRDLESTONE (Oxford).

2.30 p.m. Demonstrations, *x* rays, etc.

VENEREAL DISEASES.

President: DAVID LEES, D.S[illegible]

Vice-Presidents: ARCHIBALD [illegible] Mrs. MARGARET ROBKE, M.[illegible] TAYLOR, D.S.O., M.B., F.R.C.S.Ed. (Liverpool).

Honorary Secretaries: F. C. DOBLE, M.R.C.S., L.R.C.P., 93a, Harley Street, London, W.1; Miss MARY FORBES LISTON, M.B., Ch.B., 33, Comely Bank, Edinburgh.

The British Medical Association.

PATRON: HIS MAJESTY THE KING.

President: R. G. HOGARTH, C.B.E., F.R.C.S.ENG.,
Senior Surgeon, General Hospital, Nottingham.

AN OPEN LETTER TO NON-MEMBERS.

DEAR SIR OR MADAM,

The BRITISH MEDICAL ASSOCIATION, the largest, oldest, and most powerful of British medical organizations, was founded in 1832 to promote the medical and allied sciences, to maintain the honour and interests of the medical profession, and to foster a feeling of friendship among the members of the profession. The work of the Association is thus fourfold: (i) It acts for the profession collectively throughout the Empire in medical matters affecting the common weal; (ii) it guards the profession against unfair attack, whether legislative or other; (iii) by its work in promoting medical science and the spirit of comradeship it helps the individual practitioner to be more efficient and of greater use to the community; and (iv) it helps its members individually.

With these aims in view the Association and its local groups—namely, the Divisions and Branches mentioned below—hold many thousands of meetings yearly, at which medical, medico-sociological, and allied subjects are dealt with, nor is the social side forgotten; it publishes the BRITISH MEDICAL JOURNAL, the *Archives of Disease in Childhood*, the *Journal of Neurology and Psychopathology*, an Annual Handbook, a Handbook for Recently Qualified Medical Practitioners, and other publications; gives scholarships, grants, and prizes for clinical and research work; owns a commodious building for the housing of its central activities; is in possession of very considerable funds and resources; and spares no effort in assisting its members individually in all aspects of their professional lives.

ASSOCIATION PREMISES.

The new House of the Association at Tavistock Square, London, opened in the summer of 1925 by His Majesty the King, is a popular meeting-place for its members, especially those visiting London. There are also Houses or Offices of the Association at Adelaide, Brisbane, Cape Town, Dublin, Edinburgh, Melbourne, Perth (W.A.), Sydney, Wellington (N.Z.), and elsewhere.

CONSTITUTION AND ADMINISTRATION.

The Association is practically a federation of local medical societies, called Divisions. A Branch is a Division or (more frequently) group of Divisions. A member of the Association is, *ipso facto*, a member of the Division and Branch in the area of which he or she lives. The Divisions and Branches and the Association of which they form part are democratic bodies, the government of which is in the hands of their members.

The funds and resources of the Association are commensurate with a membership of over 32,500.

The general control and direction of the policy and affairs of the Association are vested in the Representative Body, which is elected by the Divisions throughout the Empire, and meets annually. The Council, or executive, of the Association is elected partly by the Branches throughout the Empire, and partly by the Representative Body, and also includes representatives of the Royal Naval, Royal Air Force, Army, and Indian Medical Services. The Representative Body and Council elect the Standing Committees. Among these are the Ethical, Finance, Hospitals, Insurance Acts, Journal, Medico-Political and Parliamentary, Naval and Military, Organization, Public Health, Science, Scottish, Irish, Welsh, and Dominions Committees. The Insurance Acts Committee is the executive of the Annual Conference of Representatives of Local Medical and Panel Committees, which are the statutory local professional committees under the National Health Insurance Acts.

PRIVILEGES OF MEMBERSHIP.

The privileges of a Member of the Association include:—

1. Participation in the clinical, scientific, medico-political, ethical, and social activities of the Association, local and central.
2. Receipt weekly, free by post, of the BRITISH MEDICAL JOURNAL and its SUPPLEMENT, one of the leading medical journals of the world, and one of the most widely read.
3. Participation in the government of the Association, local and central, and in the formulation of its policy.
4. Use of the Headquarters Houses of the Association. At the London House the facilities include Reference and Lending Libraries; club-room accommodation, with facilities for refreshments; garage and telephone facilities. From the Lending Library, Members (British Isles) can borrow books free of charge.
5. The advice and help of the Central Staff in matters affecting him or her individually.

SOME NEW ACTIVITIES.

Arrangements have been entered into with an old-established medical agency in respect of facilities for the buying and selling of practices and partnerships, and in respect of assistantships, locumtenencies, and other medical openings. Special terms are given to members of the Association.

The Association has under consideration proposals for amendment of the disciplinary machinery under the National Health Insurance Acts, which is a matter closely affecting all insurance practitioners. A scheme of collective clinical research with a view to assisting in the elucidation of certain difficult medical and surgical problems is being prepared.

As will be seen from the Annual Report of the Council of the Association, 1926–7 (BRITISH MEDICAL JOURNAL SUPPLEMENT, April 23rd, 1927), *there is no aspect of professional work which does not come within the scope of* the Association.

The Association's work benefits every member of the profession, and as this work can be made more and more effective as it includes more and more practitioners, the Association unhesitatingly claims the support of every medical man and woman who is registered in the British Empire.

FURTHER EXTENSION OF MEMBERSHIP.

You are most cordially invited, if not already a member of the Association, to apply for membership, and I would especially direct the attention of practitioners resident outside the British Isles, and of those recently qualified, to the liberal concessions made to them as regards subscription. Members of the Medical Services of the Navy, Army, Air Force, and India, on whose behalf the work of the Association is unceasing and invaluable, also enjoy a substantial concession in this respect.

The form of application for membership, printed at page iii of this SUPPLEMENT, should be signed and sent to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

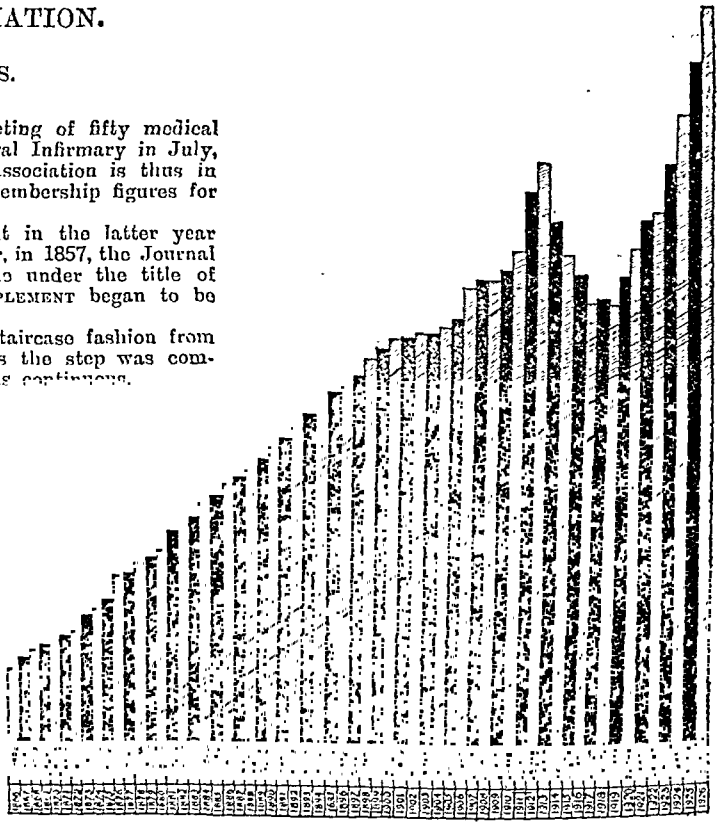
Inquiries as to the work of the Association are welcomed.

Alfred Cox

Medical Secretary.

GROWTH OF THE ASSOCIATION.

SIXTY YEARS' PROGRESS.



THE British Medical Association began in a meeting of fifty medical men held in the Board Room of Worcester General Infirmary in July, 1832, with Charles Hastings in the chair. The Association is thus in its ninety-fifth year. Our diagram shows the membership figures for the last sixty years.

From 1832 to 1854 the growth was slow, but in the latter year the figure of 2,000 was reached. Three years later, in 1857, the Journal of the Association was issued for the first time under the title of the BRITISH MEDICAL JOURNAL. The weekly SUPPLEMENT began to be published in 1904.

From 1866 to 1912 the membership rose in staircase fashion from 2,462 to 26,568. In some of those forty-six years the step was comparatively small, in others large, but the ascent was continuous.

The rapid rise in 1911 and 1912 was due to the professional upheaval that followed the introduction of the National Health Insurance scheme. Many practitioners who joined the Association solely on that account resigned soon afterwards, and the fall from 1913 to 1918 was due to that and to the dispersal of a large part of the profession during the war. Since 1918 the ground lost has been far more than regained.

In 1914 the annual subscription was raised to 2 guineas. This may have contributed in some degree to the fall in membership. Nevertheless, though the subscription was again raised, in January, 1921, to 3 guineas, no decrease of membership followed. On the contrary, the total number of members has grown year by year. As will be seen, the membership of the Association has in the last twelve years increased by over 10,000, and is now more than 32,500.

BRITISH MEDICAL ASSOCIATION.

FOUNDED 1832.

Patron: HIS MAJESTY THE KING.

THE BRITISH MEDICAL ASSOCIATION is established for the promotion of the Medical and allied Sciences, and the maintenance of the honour and interests of the Medical Profession. It has Divisions and Branches throughout the British Empire. There are 43 Branches, with 217 Divisions, in the United Kingdom, and 50 Branches, with 67 Divisions, in the British Empire Overseas.

Any Medical Practitioner registered in the United Kingdom under the Medical Acts; any Medical Practitioner who does not reside within the area of any Branch of the Association and who, though not so registered, is possessed of any qualification entitling him or her to be so registered; and any Medical Practitioner residing within the area of any Branch of the Association not in the United Kingdom who is so registered or possesses such medical qualification as shall (subject to the By-laws) be prescribed by the Rules of the said Branch, is eligible as a Member of the Association. Members of the Association are, *ipso facto*, Members of the Division and Branch in the areas of which they reside.

The liability of Members is limited.

The annual subscription, which is due in advance on January 1st in each year, and entitles the Member to all the ordinary privileges of Membership of the Association, including Membership of the Division and Branch in which he or she resides, and the weekly supply of the *British Medical Journal*, post free, is as follows:—

(A) Members resident in United Kingdom.	
Ordinary Subscription	£3 3s.
Member of not less than 40 years' standing	£2 2s.
Member of not less than 10 years' standing retired from practice	£2 2s.
Member engaged whole-time in medical instruction or research and not in practice	£2 2s.
Newly qualified practitioner elected within 2 years of registration (up to end of 4th year after registration)	£1 11s. 6d.
Two Members, being husband and wife, residing together	£4 14s. 6d.
(B) Members resident outside United Kingdom.	
Member resident within the area of a Branch (or more according to Rules of Branch)	£1 11s. 6d.
Member resident where no Branch is organized	£1 11s. 6d.
(C) Wherever resident.	
Officer on the Active List of the Royal Naval, Royal Air Force, Regular Army, or Indian Medical Service	£2 2s.

In the case of a Member elected after June 30th in any year, the subscription for that year is one-half the current annual subscription.

If you desire to become a Member of the Association, please fill in and post this form to the Association, British Medical Association House, Tavistock Square, London, W.C.1, with a cheque or postal order for your first subscription.* Cheques or postal orders should be crossed and made payable to "The British Medical Association." Election is ordinarily by the Council of the Branch in the area of which the Candidate resides, but in the case of Candidates resident in any area outside the United Kingdom where no Branch is organized, is by the Council of the Association. In the case of most Branches, no signature, other than that of the Candidate, is required (for Branches which require approving signatures see overleaf). For election by the Council (as above), two approving signatures are ordinarily required. Under no circumstances are approving signatures necessary in the case of Officers of the Royal Naval, Royal Air Force, Army, Indian, or Colonial Medical Service, on the Active List.

DETACH HERE

APPLICATION FOR ELECTION.

To the BRITISH MEDICAL ASSOCIATION,
BRITISH MEDICAL ASSOCIATION HOUSE, TAVISTOCK SQUARE, LONDON, W.C.1.

Full Christian and Surnames: Please write distinctly.

I,.....
a Registered Medical Practitioner, am desirous of being, and hereby apply to be, elected a Member of the BRITISH MEDICAL ASSOCIATION, and I agree, if elected, to pay the subscription and to abide by the Articles and By-laws of the Association for the time being in force, and the Rules of the Division and Branch to which I may at any time belong.

The following provisional programme has been arranged:

Fri ay, July 22nd.—Morning session. Discussion: The Value of [illegible] Examination of the Cerebro-spinal Fluid with regard to [illegible]ge, (*b*) Prognosis, (*c*) Treatment. To be [illegible] (London). Clinical cases illustrating types of neuro-syphilis will also be shown.

Afternoon session. Discussions: (1) The *Employment of certain* Constituents of the Gonococcus in Treatment and of other Constituents in Tests of Cure. To be opened by Major E. C. LAMBKIN, D.S.O., R.A.M.C.; (2) The Place of Bismuth in the Treatment of Syphilis, by Mr. DAVID LEES, D.S.O.

RADIOLOGY.

President: J. M. WOODBURN MORISON, M.D., C.M., D.M.R.E. (Edinburgh).

Vice-Presidents: M. R. J. HAYES, F.R.C.S.I. (Dublin); ROBERT E. ROBERTS, M.D., B.Sc., D.M.R. and E. (Liverpool).

Honorary Secretaries: W. CRICHTON FOTHERGILL, M.B., Ch.B., D.M.R.E., 5, Hermitage Drive, Edinburgh; JOHN MUIR, O.B.E., M.B., B.Ch., British Institute of Radiology, 32, Welbeck Street, London, W.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussions: (1) 10 a.m. *X* Rays in the Diagnosis of Intra-thoracic Growth. To be opened by Dr. STANLEY MELVILLE (London), followed by Mr. C. THURSTAN HOLLAND (Liverpool), Dr. A. FERGUS HEWAT (Edinburgh), and Dr. D. CAMPBELL SUTTIE (Glasgow). (2) 11.30 a.m. *X* Rays and Radium in the Treatment of Carcinoma of the Breast. To be opened by Dr. N. S. FINZI (London), followed by Dr. J. H. D. WEBSTER (London), Dr. A. E. BARCLAY (Manchester), Dr. M. R. J. HAYES (Dublin), and Dr. R. KNOX (London).

HISTORY OF MEDICINE.

President: JOHN D. COMRIE, B.Sc., M.D., F.R.C.P.E. (Edinburgh).

Vice-Presidents: ARNOLD CHAPLIN, M.D., F.R.C.P. (London); CHARLES SINGER, M.D., D.Litt., F.R.C.P. (London); R. W. INNES SMITH, M.D. (Sheffield); HENRY S. WELLCOME (Beckenham).

Honorary Secretaries: WALTER J. DILLING, M.B., Ch.B., Karcol, Mines Avenue, Aigburth, Liverpool; ADAM CAIRNS WHITE, M.B., Ch.B.Ed., Pharmacological Department, University of Edinburgh.

The following provisional programme has been arranged:

Friday, July 22nd.—10 a.m. Discussion: The Historic Evolution of Disease. To be opened by Sir HUMPHRY ROLLESTON, Bt. (Cambridge), followed by Professor GRAFTON ELLIOT SMITH (London) Ancient Prototypes of Modern Disease, Dr. G. MATHESON CULLEN (Edinburgh) World Epidemics and their Relationship in Cause and Effect to Social Conditions, and Miss M. C. BUER (Reading) The Effect of Early Industrialism upon the Health of the Community.

Papers: 12.15 p.m. Professor A. J. CLARK (Edinburgh), The Historical Aspect of Quackery. 12.30 p.m., Professor W. J. DILLING (Liverpool), The Methods of Introduction of Drugs.

Demonstrations: (1) Dr. ARNOLD CHAPLIN (London), Portraits of Old Physicians; (2) Mr. G. H. EDINGTON (Glasgow), The Development of Surgery up to the Time of Lister.

MEDICAL SOCIOLOGY.

President: F. N. KAY MENZIES, M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: L. D. CRUICKSHANK, M.D., M.R.C.P.Ed., D.P.H. (Edinburgh); Sir HENRY S. KEITH, J.P. (Hamilton); the Hon. Lord MACKENZIE, LL.D. (Edinburgh); the Hon. Sir ARTHUR STANLEY, G.B.E., C.B., LL.D., Hon. F.R.C.P.Ed. (London); Sir NORMAN WALKER, M.D., LL.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: T. YULE FINLAY, M.D., M.R.C.P.Ed., 9, Hermitage Gardens, Edinburgh; B. S. SIMMONDS, M.S., F.R.C.S., 124, Harley Street, London, W.1.

The following provisional programme has been arranged:

Friday, July 22nd.—Discussion: The Future Relationship of Municipalities to the Voluntary Hospitals of this Country. To be opened by Mr. H. L. EASON (London) and Mr. M. A. REYNARD (Glasgow Parish Council), followed by Sir HENRY KEITH, Sir ARTHUR STANLEY, and others.

The Honorary Local General Secretary of the Annual Meeting is A. FERGUS HEWAT, M.D., F.R.C.P.Ed., 14, Chester Street, Edinburgh.

PROVISIONAL TIME-TABLE.

FRIDAY, JULY 15TH.

FRIDAY, JULY 22ND.

8.30 a.m.—Medical Prayer Union Breakfast.
9.0 a.m.—Exhibition open.
10.0 a.m.—*Sectional Meetings.*
2.0 p.m.—Golf Competition for Treasurer's Cup at Gullane, No. 1 Course.
Afternoon Excursions.
4.0 p.m.—Reception by Royal Medical Society.
8.30 p.m.—Reception by the Lord Provost and Magistrates of the City of Edinburgh at Scottish Zoological Park.

SATURDAY, JULY 23RD.

Whole-day Excursion to St. Andrews, including Falkland Palace.

*Academic dress will be worn at these ceremonies.

PATHOLOGICAL MUSEUM.

The Pathological Museum Committee, of which Professor J. Lorrain Smith is chairman, Mr. D. M. Greig vice-chairman, and Dr. James Davidson (Department of Pathology, The University, Edinburgh), Mr. W. Q. Wood (48, Northumberland Street, Edinburgh), and Dr. Douglas Miller (57, Manor Place, Edinburgh) are secretaries, has arranged an extensive series of demonstrations during the Annual Meeting. A list of these demonstrations, with the names of those responsible for the arrangement of each, is appended.

1. Diseases of Liver and Biliary Tract. Professor Wilkie and Dr. James Davidson.
2. Brain Tumours. Mr. Norman Dott and Mr. W. Q. Wood.
3. Diseases of Bone. Dr. James Dawson and Mr. J. W. Struthers.
4. Series of Complete Lung Sections illustrating Pulmonary Diseases in Infancy and Childhood. Dr. Charles McNeil, Dr. Agnes Macgregor, and Dr. W. A. Alexander.
5. Diseases of the Thyroid Gland. Mr. J. N. J. Hartley.
6. Some Gynaecological Conditions. Dr. Douglas Miller.
7. Recent Experimental Work on Tumours. Mr. Illingworth.
8. Bacteriological Exhibit. Professor Mackie.
9. Dietetics: Professor Murray Lyon.
10. Urological. Mr. Wade, Mr. Leslie Stewart, and Mr. D. M. Morison.
11. Skin Diseases. Dr. Cranston Low.
12. Historical Section. Dr. John D. Comrie.
13. Peritoneal Lymphatic Absorption. Mr. Paterson Brown.
14. Comparative Pathology. Principal Bradley and Professor Matheson:
The following special subjects to be considered: Tubercle, Foot-and-Mouth Disease, and Diseases communicable to Man.
15. Statistical Methods. Colonel A. G. McKendrick, I.M.S.

16. A Series of Cases illustrating the method of teaching in the Department of Pathology. Professor Lorrain Smith and Dr. James Davidson.
17. Melanomata. Dr. James Dawson.
18. Diseases of the Breast. Professor John Fraser.
19. Thrombo-angiitis Obliterans. Mr. T. McW. Millar.
20. Tar Tumours. Mr. J. J. M. Shaw.
21. Plastic Surgery. Mr. J. J. M. Shaw.
22. Pathways of Infection to the Brain and Meninges. Dr. Logan Turner and Dr. Reynolds.
23. Experimental Nephritis and Accidental Haemorrhage. Professor Francis Browne.
24. Parasitology (including Tropical). Colonel Edward Greig, I.M.S., Professor Ashworth, and Colonel Glen Liston, I.M.S.
25. Ear, Nose, and Throat. Dr. J. S. Fraser and Dr. J. P. Stewart.
26. Venereal Diseases. Mr. David Lees.
27. Diseases of the Eye. Dr. Traquair and Dr. Charles Graham.
28. Radiological Exhibit. Dr. Woodburn Morison.
29. Vegetable Pathology. Dr. Malcolm Wilson.
30. Genetics. Dr. Crew.
31. Forensic Medicine. Dr. Douglas Kerr.
32. [illegible] Clinical Research Laboratory, Royal
33. " " Norman Dott.

It is to be hoped that as far as possible those who contribute to the Museum will at stated times be present to demonstrate their own exhibits, and particularly those who wish to supplement by exhibits their contributions to the programme of the various sectional meetings. For these personal demonstrations a room will be provided and a time-table arranged.

LISTER CENTENARY CELEBRATION.

A commemoration meeting in celebration of Lord Lister's centenary will be held in the McEwan Hall, Edinburgh, on Wednesday, July 20th, at 8 p.m. Full details were published in the BRITISH MEDICAL JOURNAL on February 12th, (p. 299), but it may be recalled that the Earl of Balfour, K.G., O.M., will preside, and that short addresses will be delivered by Sir William Watson Cheyne, Professor Tuffier (Paris), Professor Harvey Cushing (Harvard University), and Professor John Stewart (Halifax, Nova Scotia).

Throughout the week of the Association Meeting a museum of Lister relics will be on view in the Upper Library of the Old University. The relics will be gathered from many sources. The unique interest of the exhibits will be due largely to the co-operation and liberality of the directors of the Wellcome Historical Medical Museum, London.

A *Lister Memorial Volume* has been prepared and will constitute the book of the Edinburgh Meeting of the Association. A copy will be presented to each member of the Association on registration in the reception room. The volume, edited by Dr. Logan Turner, will contain sketches and reminiscences by former house-surgeons of Lord Lister, two of his own scientific addresses, and a series of letters. A section of particular interest is included dealing with the lives of Lister's fellow residents in the Edinburgh Royal Infirmary during the summer of 1854. Sir Edward Sharpey-Schafer contributes a sketch on Lister's work as a physiologist. Mr. Miles writes on "Surgery prior to Lister's time," and Professor John Fraser on "The influence of Lister's work on surgery."

Memorial inscriptions have been placed on the walls of the houses which Lister occupied successively in Edinburgh —namely, 11, Rutland Street, and 9, Charlotte Square.

A prize of £25 and a gold medal are to be awarded to the writer of the best essay on "The influence of Lister on surgery." The prize is open to students and graduates of not more than one year's standing in any medical school in the British Empire. The name of the successful essayist will be announced at the public meeting.

ANNUAL DINNER.

As already intimated, the Annual Dinner of the Association will be held in the Music Hall, George Street, on Thursday, July 21st. The hour of the dinner will be *7.15 p.m. prompt*. It is desirable that early application be made for tickets, the price of which has been fixed at 15s., exclusive of wine. Such applications should be made to the local general secretary, Dr. Fergus Hewat, 14, Chester Street.

Dinner tickets will be available for members of the Association up to 4 p.m. on Wednesday, July 20th, and will be obtainable at the reception room on presentation of the member's card. A plan of the tables will be on view at the reception room.

If seats are available, members may obtain tickets for ladies, or other guests, after 4 p.m. on Wednesday, July 20th.

REDUCED RAILWAY FARES TO EDINBURGH.

The usual concession to members of the British Medical Association in regard to railway fares will apply to the Annual Meeting in Edinburgh this summer. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue passenger tickets to Edinburgh, available from July 13th to 25th, at the ordinary single fare and one-third for the double journey, with a minimum adult fare of 1s. A printed voucher filled in by the applicant and signed by the Financial Secretary of the Association, must be given up at the booking office when the ticket is bought. These vouchers will be obtainable in due course from the Finance Department, British Medical Association, Tavistock Square, W.C.1. The cheap fare concession will, in addition to applying from stations in Great Britain, also operate from the Irish ports by railway-owned steamers, and by the boats of the Belfast Steamship, British and Irish Steam Packet, and the City of Cork Steam Packet Companies, and of Messrs. Burns and Laird, Ltd.

HOTEL ACCOMMODATION.

The Hotels and Lodgings Committee has practically completed its arrangements for coping with the large numbers who are expected to visit Edinburgh in July. In order to secure the accommodation which is believed to be necessary, the Committee has definitely engaged all the available rooms in the city, and will allocate these to applicants in rotation. The Scottish Medical Secretary (Dr. Drever) has undertaken to do this work for the Committee, and applications for rooms should be sent to him at 6, Drumsheugh Gardens. A form for the purpose has been prepared for the convenience of members and is printed in the advertisement pages this week (p. 18); it will be repeated in subsequent issues. The accommodation is grouped in three classes—namely:

1. Hotels, whose tariff for bed and breakfast ranges between 8s. 6d. and 14s. The number who can be accommodated in these is comparatively limited.

2. Private hotels and boarding houses, at prices from 5s. 6d. to 8s. 6d. for bed and breakfast. Of these there is a large number, all of them comfortable.

3. Hostels where the tariff is 8s. for bed and breakfast. Not many of these are available, but those that are can be recommended.

It will facilitate other arrangements if members who intend to be present at the Annual Meeting will notify their intention whether they have already secured rooms or not. Early application for rooms is earnestly desired.

GOLF COMPETITIONS.

The Ulster and Childe Cups will be played for on Thursday, July 21st, at Muirfield, commencing at 9.30 a.m.

The Treasurer's Cup will be played for on Friday, July 22nd, at Gullane No. 1, commencing at 2 p.m.

The Ladies' Competition will be held on the morning of July 20th at Cammo.

GARAGE ACCOMMODATION.

Garage accommodation for at least 1,125 cars will be provided; applications should be made to Dr. J. R. Drever, 6, Drumsheugh Gardens, Edinburgh.

ARRANGEMENTS FOR LADIES.

The Assembly Rooms in George Street have been taken for a ladies' club during the meeting. These rooms have a central position, and will comprise a large lounge, card and smoke rooms. There will also be a library and writing room, containing daily papers and books of local interest. An ample catering department will be established where lunch, tea, and light refreshments may be obtained. There will also be a central information bureau. The dinner to

the ladies accompanying representatives will be held at this club on Friday, July 15th, at 7.30 p.m.

During the mornings of the meeting, short excursions for ladies will take place in and around Edinburgh. These will start from the club. Parties of ladies will also be taken in the mornings to places of special interest in Edinburgh. Guides will be in attendance to conduct any ladies to parts of the city they specially wish to visit.

Arrangements for ladies' sports have been undertaken, and parties will be made up for golf and tennis. The ladies' golf competition will take place on the morning of Wednesday, July 20th.

Full details as to excursions, personally conducted tours, and sports will be obtainable at the Ladies' Club.

REPRESENTATIVES' EXCURSION TO THE SCOTT COUNTRY.

On Sunday, July 17th, an excursion to the Scott country is being arranged. The Representatives and their friends will leave Edinburgh at 9.30 a.m. in charabancs and proceed to Rullion Green. On the site of the battlefield, surrounded by the hills and amid beautiful scenery, a short religious service will be held. Thereafter, proceeding by Penicuik and Leadburn, Peebles will be reached about 11.15. From there the route leads along the north bank of the Tweed, opposite the old house of Traquair, whose historic gates have never been opened since the failure of the Jacobite cause on Culloden Field. Passing the ruined castle of Elibank, with memories of Muckle-mou'ed Meg, and Ashiestiel, Sir Walter Scott's first border home, the excursionists arrive at Galashiels. Here lunch will be provided in the Volunteer Hall. Proceeding onwards, a mile distant on the south side of the Tweed is seen Abbotsford, Scott's later home. A mile further is Melrose Abbey, where a monastery was first established by St. Aidan in the seventh century. Here is buried the heart of The Bruce, and here is the resting place of many border chieftains. The Tweed is crossed by the Leaderfoot Bridge, and a brief pause will be made at Scott's View on Bemersyde Hill. The road next turns round Bemersyde House, presented by the nation to Earl Haig as a tribute to his services during the war. A halt will be made at Dryburgh Abbey, the seat of the monastic cell of St. Modan from the sixth century, and the burial place of Sir Walter Scott. Crossing the Tweed at St. Boswells, the route now follows the south bank of the river, past the ruins of the old border fortress of Roxburgh. Floors Castle lies on the left—we will hope glistening in the sunshine. Passing through Kelso, the way leads to the north and back to Floors Castle, where the party will be entertained at tea by His Grace the Duke of Roxburghe. The road back to Edinburgh passes over Soutra. From the top a view over a wide expanse is obtained. The Lothians lie at our feet. Just across the Firth is the "Kingdom of Fife," with Stirling further to the west. Beyond lie the Ochil Hills, and in the distance are the peaks of the Grampian Mountains. The road we travel has been trod by the feet of many generations. It gave passage to Scottish hosts on their way south and to invading English armies. Descending towards Edinburgh, we pass Soutra Aisle, an ancient hospitium, Crichton Castle, and after passing through Dalkeith with its palace we see the ruins of Mary Queen of Scots's residence at Craigmillar Castle. The tour above so shortly described embraces over 120 of the best miles in Scotland. It is full of associations with Scott, Stevenson, Andrew Lang, and Crockett; and tradition and story of the Roman occupation, of the perpetual wars along the Border, of the Covenanters, and of monastic life in the abbeys along the Tweed will be constantly recalled by the various features of the beautiful and romantic scenery amid which the excursionists will travel.

EXCURSION TO FIFE AND ST. ANDREWS.

On Saturday, July 23rd, a party limited to 100 will leave the Waverley Station by special train at 9.22 a.m. and proceed by way of the Forth Bridge, passing the Hawes Inn mentioned in *The Antiquary* and Stevenson's *Kidnapped*. The naval base of Rosyth will be seen on the left. After emerging from a tunnel, St. Margaret's Hope—where "St. Margaret" landed in Scotland—will come into view. Leaving behind Kirkcaldy, with its associations with Adam Smith, the party will arrive at Ladybank, be met by charabancs, and proceed to Falkland Palace. This building has associations with Scottish history from the days of King Robert the Bruce to Charles II, and was the scene of the alleged murder of the young Duke of Rothesay by his uncle Albany (see *The Fair Maid of Perth*). Here James the Fifth died and Mary was a frequent visitor, fleeing from the exhortations of John Knox. The party will leave Falkland Palace at 11.30 and, by the kind invitation of Mr. and Mrs. Leslie Melville, will visit Melville House, which was built by the first Earl of Melville in 1692. Here are pictures of Mary Queen of Scots, Claverhouse, Gustavus Adolphus, and an interesting exhibition of letters by most of the Stewart kings. The party will next proceed by the old Royal Road which was followed by the kings of Scotland in passing to and from St. Andrews. Half-way lies Cupar, the county town. Here are the ruins of the castle in which Macbeth murdered Duncan, and from which Wallace drove the English, and here Sir David Lindsay's plays were acted. At Pitscottie the route follows the track of the murderers of Archbishop Sharp, over Magus Muir, where he was killed. At St. Andrews lunch will be provided by the courtesy of the Fife Branch. The Cathedral, Castle, and University Buildings will then be visited, after which tea will be provided at the Sir James Mackenzie Clinical Institute by the courtesy of Dr. Maitland Ramsay (the Director) and Mrs. Maitland Ramsay. The special train will leave St. Andrews at 5.10 p.m., arriving at the Waverley Station, Edinburgh, at 7 p.m. Price of ticket, inclusive of rail, motors, and entrance fees, 12s. 6d.

IRISH MEDICAL SCHOOLS' AND GRADUATES' ASSOCIATION.

The annual lunch of the above Association will be held at 1 o'clock sharp, on Wednesday, July 20th, at Messrs. Ferguson and Forresters, 129, Princes Street, Edinburgh. Tickets, 4s. each (exclusive of wines), may be obtained from the honorary secretary of the Provinces, Dr. Falkland L. Cary, 67, King's Road, Harrogate. Members of the Association are asked to bear in mind that Wednesday, July 20th, is the date allotted to the Lister Centenary celebrations, and there will be many appointments in the afternoon, so that punctual attendance at the luncheon is essential.

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

Anaesthetics in Connexion with Dental Benefit.

By SOUTH SHIELDS; and TYNESIDE: That the recommendation contained in para. 118 of the Annual Report of Council be amended by the insertion of the word "minimum" before the word "fees" in the first line and before the word "fee" in the eighth and tenth lines.

By WORCESTER: That the recommendation contained in para. 118 of the Annual Report of Council be amended to read as follows:

> That the fee for administration of an anaesthetic should be in all cases one guinea.

Whole-time Medical Officers of Public Schools.

By DUNDEE: That the sixth recommendation contained in para. 131 of the Annual Report of Council be amended by the deletion of the words "Dispensing of medicine, but not the provision of drugs."

Middle Class Hospital Policy.

By SALISBURY: That the Representative Body instructs the Council to consider the formulation of a Middle Class Hospital Policy.

Administration of Anaesthetics.

By BIRMINGHAM CENTRAL: That the recommendation contained in para. 117 of the Annual Report of Council be amended by the insertion in the tenth line, between the words "dentist" and "may," of the following words: "who has received special instruction in the administration of anaesthetics."

GENERAL COUNCIL
OF
MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1927.

(Continued from page 218)

DISCIPLINARY AND OTHER INQUIRIES.

Newspaper Publicity to Attract Patients.

ON May 25th the Council considered the case of Frederick Joseph William Porter, D.S.O., registered as of the Army Medical Service, L.S.A.Lond., M.R.C.S.Eng., L.R.C.P.Lond., who was summoned on the [illegible] to obtain patients and to promote his [illegible] by notices inserted in the press. The notices appeared in the *Times of India* and five other Indian journals, and ran as follows: "Major F. J. W. Porter, R.A.M.C., D.S.O., has now returned to India from England after an absence of a year, and will shorly resume his practice at Karachi." Four of the notices, three of them in Karachi papers, added that he was putting up at the Carlton Hotel where he might be consulted.

The complainants were two members of the Indian Medical Service, Colonel Ivor Davenport Jones and Major Charles Newton-Davis, and Dr. Guy Theodore Wrench of Karachi. The complainants were not present, and Mr. Harper, the Council's solicitor, laid the facts before the Council. Major Porter was accompanied by Mr. Oswald Hempson, his solicitor.

Mr. Harper said that Major Porter had spent many years in India. After giving up his practice in Bombay, and spending some time in England, he decided to resume practice in India, which he did in February, 1926, whereupon these notices appeared in the Indian journals. A complaint with regard to this conduct was made by Dr. Wrench, whereupon Major Porter prosecuted him before the magistrate for defamation of character, but the case was dismissed.

Major Porter in the witness-box said that he had had a private practice in India for a very long time. He gave up his Indian practice on a previous occasion, but subsequently returned to Bombay in 1923, and then consulted the registrar of the Bombay Medical Council whether on resuming his practice he might make an announcement in the daily press to the following effect: "Pending the opening of his new surgical nursing home, Major Porter has removed from —— to —— Hotel, where he may be consulted." The registrar thought that this was in order, and the notice appeared in all the papers of Bombay. In December, 1924, he sold his practice and again returned to England, but for financial reasons he decided to return to India in 1926 and once more resume practice. When he sold his practice there was a stipulation that he should not practise in Bombay or on the island. Some friends on his return pressed him to go to Poona, but as this was only three hours' journey from Bombay he thought it fairer to his successor to go farther afield, and he decided on Karachi, which was five or six hundred miles away. His practice was a purely surgical one, and he was accustomed to have patients from all parts of India as well as from Arabia and Mesopotamia. Knowing some members of the staff of the *Times of India* he asked them to insert the announcement which was the subject of the present complaint, which they did in the "Social and Personal" column. In this he was guided by his experience in 1923 when the registrar of the Bombay Medical Council approved a similar notice. He did not pay for the notice, and at his request the *Times of India* sent it to other papers. In one instance, however, that of the *Parsi Sansar*, of Karachi, the paragraph was "decorated" in the office of the newspaper in a manner over which he had no control and of which he did not approve. It was headed, "Well-known Surgeon in Karachi," and went on, "Major Porter, the well known surgeon of Bombay," etc. All these notices appeared within a few days of one another. On arrival at Karachi he rang up Dr. Wrench to fix up an appointment, but was told that Dr. Wrench would have nothing to do with him. He then wrote to the registrar of the Bombay Medical Council, enclosing a specimen notice, and asked whether he had contravened any regulation. The registrar replied that he thought he was protected by one of the rules in "Ethical Suggestions" which governed the matter. Learning then that Dr. Wrench had been saying that he was an advertiser and not a proper person to be in the profession he brought an action for defamation of character, but this was dismissed.

In cross-examination the point was put to him that the "Ethical Suggestions" referred to allowed for only two such insertions, and here there were half a dozen. Major Porter replied that he regarded them as only one insertion. The announcement appeared once only in each of the six papers, which covered quite different parts of the Indian community. Asked why he took action against Dr. Wrench in the criminal court instead of civil proceedings, in view of the fact that in criminal proceedings, if defamation were proved, the penalty might be up to two years' imprisonment, he said that he was unaware of this, that he did not want damages, and that the proceedings before a magistrate were so very much quicker than before a civil court, where they might drag on for years, that he chose the course he did. In so doing he acted entirely on legal advice. He admitted that in 1913 he had published a series of articles in local papers on medical topics.

Mr. Hempson said that whatever view might be held as to his client's conduct, the Council would believe that there was some justification for his view that what he had done was permissible, taking into account the previous opinion of the Registrar at Bombay. The jurisdiction of the General Medical Council was, of course, supreme, but it would be unfortunate if it should appear that there was a divergence of opinion between the two bodies. His client had had a very honourable career, and the mere bringing of such a charge was itself a sufficient punishment for any error he might have committed.

Mr. Harper said that to bring in the Bombay Medical Council was a little disingenuous, for when he submitted the cutting from one of the papers he did not tell the registrar that a similar announcement had appeared in several other journals.

The Council found the facts proved, and the PRESIDENT said:

"The facts which have been proved bring you within the terms of the Council's Warning Notice in regard to advertising, which states that the practice of advertising by a registered medical practitioner with a view to procuring patients is, in the opinion of the Council, contrary to the public interest and discreditable to the profession of medicine, and any registered medical practitioner resorting to any such practice renders himself liable on proof of the facts to have his name erased from the *Medical Register*.

"The Council, as you will see from the terms of the Warning Notice, take a serious view of the offence which has been proved in your case; but in order to give you time to realize your position in this regard the Council have postponed judgement in your case until the May session of 1928."

Before that date Major Porter would be required to send to the Registrar the names of some of his professional brethren who would testify as to his conduct in the interval with reference to this practice.

Sale of Poisons by Unqualified Assistants.

Three unusual cases, similar in character, and all from the same district, were brought forward on the complaint of the Pharmaceutical Society of Great Britain. The charge in each case was:

"That, being a registered medical practitioner, keeping a medical hall, open shop, or other place in which scheduled poisons or preparations containing scheduled poisons are sold to the public, you have employed for your own profit and under cover of your own qualifications an assistant—namely, one (a different name was mentioned in each case) who was left in charge of such premises, but was not legally qualified to sell scheduled poisons to the public.

"And that in relation thereto you have been guilty of infamous conduct in a professional respect."

The respondents were Lawrence Crombie, registered as of Dunollie, Dalmuir, Glasgow, M.B., Ch.B., Eliazer Gelfer, registered as of Abbotsford Place, Glasgow, L.R.C.P., L.R.C.S., L.R.F.P.S., and William Mason Hamilton, registered as of Law Junction, Lanarkshire, M.B., Ch.B. Dr. Crombie and Dr. Hamilton were present, and Dr. Gelfer sent a written statement. They were defended by Mr. Oswald Hempson on behalf of Messrs. Turnbull and Findlay, solicitors to the Medical and Dental Defence Union of Scotland.

Mr. W. H. Quarrell, of Messrs. Thompson, Quarrell, and Attneave, who represented the Pharmaceutical Society, had copies of the *Pharmaceutical Journal* containing an account of proceedings which had taken place on this matter in Scotland distributed to members of the Council, and this, he said, saved him from making any opening speech. Lysol or Jeyes fluid had been sold by women not legally qualified employed by the respondents.

Dr. Crombie in evidence said that he took over from his predecessor in his practice a medical hall, together with the stock, which included poisons, and he re-engaged the lady assistant, who was not a qualified chemist. He also arranged with a qualified chemist, Mr. Armstrong, to run the business for him, and to him he gave directions. Any sale of poisons which took place by the assistant was not done with his cognisance or approval, but he expressed his regret to the Council that his assistant should have actually sold poisons.

In cross-examination he was asked how he accounted for the fact that lysol and Jeyes fluid were loose and close to the assistant's hand. Dr. Crombie replied that he used Jeyes fluid himself as a disinfectant in the surgery. He could not account for it being sold without label or name. He was aware of the regulations with regard to the labelling of poisons, but at the time he did not think of Jeyes fluid as coming under the Poisons Act.

Mr. Thomas Armstrong in evidence said that Dr. Crombie asked him to supervise the shop and the assistant. The assistant was told not to sell poisons, and she knew in a general way what she could and could not sell. The first thing he did on taking over the business was to remove the dangerous drugs and poisons from her reach.

Dr. Gelfer's case was next taken. A letter was read stating that he profoundly regretted that owing to the fact that lysol was so freely sold it never occurred to him that any qualification was required as to its sale, and he was not the only practitioner similarly ignorant. He admitted that he had a shop and employed an assistant not legally qualified, but the selling of a bottle of lysol by her was an oversight, and on the actual terms of the charge he was not guilty.

Dr. Hamilton then went into the box, and said that he made out for his assistant a list of articles which she was entitled to sell; these things included dentrifices and so forth. She did sell a bottle of lysol to an inspector, but lysol was not among the things on the list in her possession. The lysol on the premises was solely for his own use. Mr. Quarrell pointed out that when the girl employed by Dr. Hamilton pleaded guilty in the police proceedings it was stated on her behalf that since this had happened the doctor had given her instructions not to sell poisons. Dr. Hamilton replied that he gave instructions afterwards again, but he had also given instructions previously.

Mr. Hempson, on behalf of the respondents, said that they all recognized the necessity for th[illegible] that ignorance of the law was no excuse. A[illegible] s so well acquainted with the ready sale [illegible] that one was liable not to rank them [illegible] is clients belonged to that unfortunate [illegible] upon to suffer as a warning to others who were themselves equally guilty.

Mr. Quarrell said that the respondents themselves had disclosed to the Council that there had been neglect and carelessness. If doctors were to be allowed really to keep open shop it must be insisted that they had an exact knowledge of the regulations and saw that they were carried out.

The Council found the facts proved against all the respondents.

The PRESIDENT said:

"These facts indicate a practice which the Council regards as being fraught with danger to the public and not creditable to a member of the medical profession. In view of the Warning Notice which has been issued by the Council it is a professional offence of which grave notice is bound to be taken. But as you have expressed to the Council your regret for the commission of such professional offence and have pledged yourselves to abstain from conduct affording similar ground of complaint, the Council have decided not to proceed to judgement on the facts proved against you at this session, but to postpone judgement for six months, and they will ask you to appear before them in November of this year, and will give you an opportunity of offering testimony on your behalf with regard to your conduct in the interval."

He thanked the representative of the Pharmaceutical Society for bringing the facts before the Council.

Misdemeanour.

On May 27th the Council considered the case of Duncan Miller, registered as of Glebe House, Washington, co. Durham, M.B., Ch.B., who was summoned on the charge that in May, 1926, he was convicted at Gateshead police court of being drunk in charge of a motor car and of driving a motor car to the danger of the public, and on December 31st of the same year of being found drunk on the highway.

Mr. Harper said that after the first conviction Dr. Miller received a serious warning from the Council, and yet within a few months there was this second conviction. He understood Dr. Miller denied being drunk on the second occasion, but he had pleaded guilty at the police court.

Dr. Miller in a statement to the Council said that on the second occasion he pleaded guilty under a misapprehension, and he strongly denied that he was drunk. He had suffered from malaria in the army, which had made him susceptible to very small amounts of alcohol. Since his second conviction, that is to say, during the whole of the present year, he had been a total abstainer, and intended to remain so.

The decision of the Council was that Dr. Miller's convictions had been proved, but in order to give him an opportunity of considering his position it postponed judgement until the May session, 1928, when he would be required to appear and to produce testimonials as to his conduct in the interval.

(To be continued.)

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Rear-Admiral J. F. Hall, C.M.G., is placed on the retired list at his own request.

Surgeon Commander H. H. Babington to the *Maidstone*.

Surgeon Lieutenants C. R. Moore to the *Wallace*, to be accommodated in the *Wallace* (amended appointment); J. R. C. Spicer to the *Gnat*.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant Commander H. O. Martin to the *Victory* for R.N. Hospital, Haslar, for fourteen days' training.

Surgeon Lieutenants H. Winstanley and R. J. Matthews to the *Victory* for R.N. Hospital, Haslar, for fourteen days' training.

Surgeon Sublieutenant H. M. Willoughby promoted to Surgeon Lieutenant.

ROYAL ARMY MEDICAL CORPS.

Captain W. Bruce, O.B.E., to be Major.

Captain C. F. Anthonisz to be Major (prov.), February 15th, 1927 (substituted for notification in the *London Gazette*, February 25th, 1927).

E. M. Wright to be temporary *Lieutenant*.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader J. T. T. Forbes to Headquarters, Coastal Area.

Flight Lieutenant C. G. J. Nicolls is granted a permanent commission in this rank.

Flying Officer P. D. Barling is promoted to the rank of Flight Lieutenant.

INDIAN MEDICAL SERVICE.

Lieut.-Colonel C. D. Franklin, O.B.E., assumed collateral charge of the duties of Civil Surgeon, New Delhi, with effect from April 11th.

Major E. S. *Goss, M.C., has been appointed as Officer-in-charge, Medical* Store Depot, Lahore Cantt.

The Hon. Major-General T. H. Symons, C.S.I., O.B.E., K.H.S., has resigned his appointment as a Member of the Council of State.

Major-General A. Hooton, C.I.E., K.H.P., has been nominated to be a member of the *Council* of State.

The following officers have been appointed substantively to be Agency Surgeons under the Government of India in the Foreign and Political Department: Majors R. F. D. MacGregor, M.C., C. J. Stocker, M.C., and J. B. Hance, O.B.E.

Lieut.-*Colonel* F. E. Wilson is posted as Civil Surgeon, Quetta.

Lieut.-Colonels S. Hunt and E. D. W. Greig, C.I.E., have retired from the service

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

Captain R. R. Evans, R.A.M.C., to be Divisional Adjutant 55th (W. Lan.) Division, vice Captain R. L. Davis, O.B.E., vacated.

Lieutenant L. C. F. Chevens resigns his commission.

TERRITORIAL ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel A. W. Moore, O.B.E., T.D., from the Active List, to be Lieutenant-Colonel.

Major J. Wallace, O.B.E., T.D., from the Active List, to be Major.

VACANCIES.

ALL SAINTS' HOSPITAL FOR GENITO-URINARY DISEASES.—(1) Resident Senior House-Surgeon. (2) *Non-Resident Junior House-Surgeon.* Males. Salary at the rate of £200 and £150 per annum respectively.

ASHTON-UNDER-LYNE DISTRICT INFIRMARY.—House-Surgeon. Salary at the rate of £150 per annum.

BARKING TOWN URBAN DISTRICT COUNCIL AND ESSEX COUNTY COUNCIL.—Medical Officer of Health, etc. Total salary £850 per annum.

BELFAST: MATER INFIRMORUM HOSPITAL.—Honorary Radiologist.

BIRKENHEAD UNION.—Resident Assistant Medical Officer at the Infirmary. Salary £200 per annum, rising to £300.

BRISTOL GENERAL HOSPITAL.—Honorary Assistant Surgeon to the Ear, Nose, and Throat Department.

CHARING CROSS HOSPITAL, W.C.2.—(1) Registrar to the Nose, Throat, and Ear Department (male); honorarium £100 per annum. (2) Honorary Anæsthetist.

CHELSTER ROYAL INFIRMARY.—Third House-Surgeon (male). Salary £150 per annum.

CHISWICK GENERAL HOSPITAL, W.4.—Second Honorary Consulting Surgeon.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—House-Physician (male). Salary at the rate of £100 per annum.

COLCHESTER: SEVERALLS MENTAL HOSPITAL.—Assistant Medical Officer (lady). *Salary £510 per annum, rising to £610.*

DURHAM COUNTY HOSPITAL.—Junior House-Surgeon (male). Salary at the rate of £120 per annum.

EAST SUSSEX COUNTY MENTAL HOSPITAL, Hellingley.—Junior Assistant Medical Officer (male, unmarried). Salary £350 per annum, rising to £400.

ECCLES AND PATRICROFT HOSPITAL.—House-Surgeon (male). Salary £150 per annum.

ELIZABETH GARRETT ANDERSON HOSPITAL, Euston Road, N.W.1.—Staff Post of Obstetrician (female).

FEDERATED MALAY STATES MEDICAL DEPARTMENT.—Radiologist. Salary £700-£25-£1,120 per annum.

GLASGOW PARISH COUNCIL.—Superintendent of Poor Law Hospitals. Salary £1,500 per annum, increasing to £2,000.

HAMPSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—(1) Casualty Surgical Officer at the Out-patient Department. (2) House-Surgeon. Salary in each case at the rate of £100 per annum.

HEMEL HEMPSTEAD: WEST HERTS HOSPITAL.—Resident Medical Officer. Salary £150 per annum.

HEREFORD COUNTY COUNCIL AND THE BROMYARD URBAN AND BROMYARD, LEDBURY, AND LEOMINSTER RURAL DISTRICT COUNCILS.—Assistant County *Medical Officer*, etc. Salary £685 per annum.

HOSPITAL FOR WOMEN, Soho Square, W.1.—Resident Medical Officer. Salary at the rate of £100 per annum.

HULME DISPENSARY, Dale Street, Manchester.—Resident Medical Officer (unmarried). Salary £200 per annum.

LONDON HOSPITAL, E.—Resident First Assistant to the Gynæcological and Obstetric Department. Salary £300 per annum.

LONDON UNIVERSITY.—University Chair of Pathology tenable at St. Bartholomew's Hospital Medical College. Salary £1,000 a year, together with £500 as Pathologist to the Hospital.

MANCHESTER EDUCATION COMMITTEE.—Two Assistant School Medical Officers (males). Salary £600 per annum, rising to £750 each.

MANCHESTER: ROYAL MANCHESTER CHILDREN'S HOSPITAL.—Senior Medical *Officer for Out-patient Department (non-resident).* Salary £300 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—(1) Assistant Physician. (2) Casualty Officer (male). (3) House-Surgeon (male). Salary for (2) £150 per annum, and for (3) £125 per annum.

NORTH MIDDLESEX HOSPITAL, Edmonton, N.18.—Assistant Medical Officer. Salary £400 per annum.

NORTHAMPTON COUNTY BOROUGH EDUCATION COMMITTEE.—Assistant School Dentist. Salary £450 per annum.

NUNEATON: CALDECOTE HALL FOR THE TREATMENT OF ALCOHOLISM, etc.—Assistant Medical Officer (male, unmarried). Salary at the rate of £150 per annum.

OLDHAM ROYAL INFIRMARY.—House-Surgeons in charge of (*a*) Out-patient, *Casualty and Special Departments*; (*b*) *Women's and Children's Wards*; (*c*) Men's Wards. Salary £175 per annum each.

OXFORD: RADCLIFFE INFIRMARY AND COUNTY HOSPITAL.—(1) House-Surgeon. (2) Obstetric House-Physician. Salary at the rate of £120 per annum each.

ROCHDALE INFIRMARY.—Junior House-Surgeon (male). Salary £200 per annum.

ROYAL CHEST HOSPITAL, City Road, E.C.1.—Physician with charge of Out-patients.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—Resident Anæsthetist.

ST. MARY'S HOSPITAL, W.2.—Assistant Pathological Chemist. Salary £300 per annum.

ST. PETER'S HOSPITAL FOR STONE, etc., Henrietta Street, W.C.2.—Clinical Assistants.

SALFORD ROYAL HOSPITAL.—(1) House-Physician. (2) House-Surgeon attached to the Genito-urinary Department. (3) House-Surgeon to Gynæcological, Aural, and Skin Departments. (4) Casualty House-Surgeon. Salary at the rate of £125 per annum each.

SALVATION ARMY (MOTHERS' HOSPITAL), Lower Clapton Road, E.5.—Junior Resident Medical Officer (female). Salary at the rate of £60 per annum.

SEAMEN'S HOSPITAL SOCIETY, Dreadnought Hospital, Greenwich, S.E.—Anæsthetist; honorarium 50 guineas a year. House-Physician and House-Surgeons; salary at the rate of £110 per annum each and a proportion of fees.

SEAMEN'S HOSPITAL SOCIETY.—*Assistant Medical Officer at King George's* Sanatorium for Sailors, Liphook, Hants. Salary at the rate of £200 per annum.

SHEFFIELD ROYAL INFIRMARY.—House-Surgeon. Salary at the rate of £80 per annum.

SHREWSBURY DISPENSARY.—Medical Officer. Minimum salary £280.

STAFFORDSHIRE GENERAL INFIRMARY, Stafford.—*House-Surgeon (male).* Salary at the rate of £200 per annum.

UNIVERSITY COLLEGE HOSPITAL, Gower Street, W.C.1.—Whole-time Surgical Registrar. Salary £250 per annum.

VICTORIA HOSPITAL FOR CHILDREN, Tite Street, Chelsea.—Senior Resident Medical Officer (male). Salary £250 per annum.

WARRINGTON: COUNTY BOROUGH.—Assistant Medical Officer of Health (female) for Maternity and Child Welfare, etc. Salary £250 per annum.

WARWICKSHIRE AND COVENTRY JOINT COMMITTEE FOR TUBERCULOSIS.—Assistant Resident Medical Officer at the Warwickshire King Edward VII Memorial Sanatorium. Salary at the rate of £250 per annum.

WILLESDEN GENERAL HOSPITAL, Harlesden Road, N.W.10.—(1) Honorary Surgeon to Ear, Nose, and Throat Department. (2) Out-patient Clinical Assistants.

WELSH NATIONAL SCHOOL OF MEDICINE.—(1) Assistant in the Medical Unit; salary £500 per annum. (2) Laboratory Assistant; wages £5 per week.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) House-Physician. (2) House-Surgeon. (Males.) Salary at the rate of £100 per annum each.

WOLVERHAMPTON AND STAFFORDSHIRE HOSPITAL.—Resident Surgical Officer. Salary £250 per annum.

CERTIFYING FACTORY SURGEON.—The appointment at Cottingham (Northamptonshire) is vacant. Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

APPOINTMENTS.

GRAHAM, D. C., M.B., Ch.B.Edin., Certifying Factory Surgeon for the Selkirk District, co. Selkirk.

LAUGHTON, N.B., M.B., Ch.B.Edin., D.P.H.Oxf., Tuberculosis Officer for Northampton.

MCKEGGIE, J. W., M.B., Ch.B.Aberd., D.P.H., Medical Officer of Health and School Medical Officer for Bilston.

RICHARDS, E. W., M.B., Ch.B.Edin., D.P.H., Medical Officer of Health, Montgomery County Council.

WILSON, Arthur J., M.B., Ch.B.Edin., Assistant Honorary Physician, Coventry and Warwickshire Hospital.

LEEDS GENERAL INFIRMARY.—*Honorary Surgeon:* Alfred Richardson, M.B., B.S., F.R.C.S. *Honorary Assistant Surgeon:* Digby Chamberlain, Ch.M., F.R.C.S.

ST. THOMAS'S HOSPITAL.—*Resident House-Surgeon:* (Throat) J. Morris, M.B., B.Ch.Cantab., M.R.C.S., L.R.C.P. *Obstetric House-Physicians:* (Senior) A. J. Wrigley, M.B., B.S.Lond., F.R.C.S.Eng. (Junior) T. S. Dewey, B.A., M.B., B.Ch.Cantab., M. *House-Surgeons:* (Senior) M. Dykes Bower, J. F. L. Barnes, M.R.C.S., L.R.C.P. *Chief ...istants:* (Ophthalmic) J. A. Hartley, M.R.C.S., L.R.C.P., J. F. Stent, M.R.C.S., L.R.C.P.; (Ear) H. I. Marriner, F.R.C.S.Edin. (Chief Assistant), A. S. Wallis, M.R.C.S., L.R.C.P., ...R.C.P.; (Throat) D. F. A. Neilson, F. ... DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.

Sections of Laryngology and Otology.—Combined Summer Meeting. *Laryngological Session:*—Thurs., 2 p.m., Mr. F. B. Gilhespy: Chronic Hyperplasia of the Upper Jaw; Mr. W. G. Howarth: Some Points in the Technique of Laryngo-fissure; Mr. T. B. Layton: Relation of Nasal Polypi to Inflammation of Accessory Sinuses of the Nose; Mr. Douglas Guthrie and Mr. Norman Dott: The Occurrence of Brain Tissue in the Nose, the so-called Nasal Glioma. *Otological Session:*—Fri., 10 a.m. to 12.30 p.m., Papers: ... s by Dr. Scott Williamson, Mr. E. ... ns, and Dr. Dan McKenzie; Posterior ... ppuration of the Middle Ear by Dr. ... ome Radiograms of the Normal and ... iraham Hodgson. *Laryngological Clini* ... and Specimens. *Otological Session* (Clinical Meeting): 9.30 a.m., Cases; 10 a.m., Paper, with Cinematograph Demonstration, by Dr. Georges Portmann (Bordeaux): The Saccus Endolymphaticus and an Operation for Draining the same for the Relief of Vertigo. Demonstration by Dr. Albert Gray: Stereoscopic Transparencies of Specimens of the Temporal Bone. Cases and Specimens.

Section of ... p.m., Cases. 8.30 p.m., Lieut.-Colonel H. Herbe ... emonstration of the Anatomy of the Filtration ... Meeting.

ROYAL COLLEGE OF PHYSICIANS, Pall Mall East, S.W.1.—Thurs., 5 p.m., Croonian Lecture by Sir F. Gowland Hopkins, F.R.S.: The Task of Biochemistry.

POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—*Fellowship of Medicine:* Thurs., 3 p.m., Special Clinical Demonstration at the Royal Eye Hospital; free to members of the medical profession. *Chelsea Hospital for Women*, Arthur Street, S.W.: Special Course in Gynaecology, mornings and/or afternoons. *Central London Ophthalmic Hospital*, Judd Street, W.C.: Afternoon Course. Lecture Demonstrations and Instruction in the Out-patient Department. All information as to fees, etc., obtainable from the Fellowship of Medicine, 1, Wimpole Street, W.1.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., Chronic Appendicitis in Children.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Eczema. Thurs., 5 p.m., Mycosis Fungoides.

NATIONAL HOSPITAL, Queen Square, W.C.1.—Tues., Thurs., Fri., 2 p.m., Out-patient Clinics. Tues., 3.30 p.m., Neuro-syphilis. Thurs., 3.30 p.m., Encephalitis Lethargica. Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m., Muscular Atrophy. Operations: Tues. and Fri., 9 a.m.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical Skin and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 3.15 p.m., Demonstration of Selected Medical Cases.

ST. MARY'S HOSPITAL, Institute of Pathology and Research, Paddington, W.2.—Thurs., 5 p.m., Molecular Movement in the Living Body.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital, Ouseley Road, S.W.—Wed., 4 p.m., Disabilities associated with Fractures.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—At Royal Infirmary: Fri., 3.30 p.m., Clinical Cases.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.

BIRTHS.

MITCHELL.—At Ness House Nursing Home, Inverness, on May 26th, the wife of Dr. L. M. V. Mitchell, of a daughter.

NIXON.—On May 27th, at 7, Lansdown Place, Clifton, Bristol, Doreen, the wife of Dr. J. A. Nixon, of a daughter.

SAUNDERS.—On May 25th, 1927, at 10, Lyford Road, Wandsworth Common, S.W., to Christine (*née* Holloway), wife of Robert J. Saunders, M.R.C.S., L.R.C.P., a daughter.

SMITH.—On May 27th, at 5, Cavendish Terrace, Stanwix, Carlisle, to Gwendoline (*née* Chave), wife of Dr. J. N. Douglas Smith, a son.

DEATH.

ROBINSON.—On May 25th, 1927, at 45B, Golders Green Road, N.W.11, Isabel Kate, aged 72, widow of Dr. Arthur H. Robinson, of St. Mary's Infirmary, Highgate Hill.

Printed and published by the British Medical Association, at their Office, Tavistock Square, in the Parish of St. Pancras, in the County of London.

GENERAL COUNCIL
OF
MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1927.

(Concluded from page 231.)

EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee of the General Medical Council was held on May 22nd, with Sir DONALD MACALISTER in the chair. Some of the matters dealt with by the committee, such as the cessation of reciprocity between Quebec and this country, and the renewal for one year of the recognition hitherto accorded to the medical degrees of Bombay, Madras, Lahore, and Lucknow, were dealt with in the President's address to the Council on the following day (SUPPLEMENT, May 28th, p. 217).

Reciprocity with New Zealand.—A communication was considered from the Medical Council of New Zealand transmitting an Act recently passed to amend the Medical Practitioners Act, 1914. The new Act contains a provision that the New Zealand Council may, if it thinks fit, require the holder of a foreign diploma before registration to pass an examination, and that a person registered or eligible for registration in the United Kingdom by virtue of a qualification granted outside the United Kingdom shall not be entitled as a right to registration in New Zealand—that is to say, the Council may have power to refuse approval or require further examination. A letter has been sent to the Medical Council of New Zealand pointing out that this is not in accordance with the terms under which reciprocity between the United Kingdom and New Zealand was established in 1888. Under the present reciprocity arrangement any practitioner registered in the Colonial List in virtue of New Zealand qualifications is entitled to practise in any part of the British Dominions or any foreign country with which reciprocity has been established. The requirement laid down in this new Act is regarded as an abrogation of reciprocity and as constituting a change in the local law which the Council could not consider as conserving to medical practitioners registered in the United Kingdom the privileges they have hitherto had of practising in New Zealand. It is thought possible that this aspect of the matter has not occurred to the Medical Council of New Zealand, and therefore inquiry is being made before proceeding, as the General Medical Council will have to do if this new position is maintained, to recommend to the Privy Council that in the absence of reciprocity the extension of Part II of the Medical Act, 1886, to New Zealand should be rescinded. Such rescindment would render New Zealand practitioners unable to register in the United Kingdom by virtue of a qualification obtained in that Dominion.

Australian Universities.—The committee had before it a memorandum by Sir Edward Coey Bigger, until lately a member of the Council, on his recent visit to Australia and Ceylon. He wrote that he was greatly impressed in each of the Australian schools with the excellence of the equipment for teaching purposes and, so far as he could judge, the thoroughness of the teaching given. Up to the present it had not been possible to employ external examiners in Australia, but he thought it was now being generally realized that such appointments were advisable. He also visited the Tropical Diseases Institute at Townville, associated with Sydney University, and actually situated in the tropics. He thought that this institute was capable of considerable expansion, and might by suitable arrangements with the medical schools train men for the Diploma in Tropical Medicine and Hygiene.

Notification of Puerperal Sepsis.—The Scottish Board of Health addressed a letter to the Council in which it stated that instances had been brought to its notice of failure or delay on the part of medical practitioners to notify cases of puerperal sepsis, and asked that a pronouncement might be made, when opportunity offered, that the Council would seriously regard such failure or delay to notify cases. The Board was of opinion that this would be more effective than the prosecution of individual cases by procurators fiscal on the representations of local authorities. The Executive Committee decided to inform the Board of Health that the Council was empowered to consider cases of conviction for offences such as failure to notify infectious disease, and that it would be ready to deal with any such convictions reported to it.

Proposed Register of Opticians.—In view of the bill recently before Parliament and the setting up of a departmental committee to consider the general question of the desirability of establishing a statutory register of opticians, the President drew up a memorandum embodying the views which the General Medical Council had expressed on previous occasions with regard to similar proposals, and the memorandum has been forwarded to the Minister of Health for the use of the departmental committee. It is set forth that in 1906, when the British Optical Association presented a petition for a charter, and when there was an Opticians Bill before the House of Lords, the General Medical Council adopted a resolution that it would be dangerous in the public interest to confer the privileges and powers contemplated on persons not qualified in medicine and surgery. A memorandum was also approved by the Council at that time pointing out that the knowledge necessary to distinguish purely "optical" defects of the eye, if such there were, from conditions bordering upon or passing into disease could only be obtained by a complete medical education, and that the grant of "sight-testing" diplomas to persons not medically educated, and who would be likely to use them as instruments of trade advertisement, could hardly fail to lead to disastrous results. The supposed analogy of the pharmacist would not bear

investigation, for the pharmacist dealt with a great range of raw materials and preparations, many of which in unskilful hands would be dangerous to life, whereas the optician dealt only with lenses, few in number, simple in construction, and harmless in themselves. His shop contained no sources of peril against which the public might rightly ask to be protected. Moreover, the pharmacist exceeded his duty if he undertook to diagnose or prescribe for even the simpler departures from health. The conclusion of the memorandum was that to confer on the optician the privilege of himself prescribing for and treating patients suffering from disorders of the eye would be to sanction the creation of an inferior and purely commercial order of medical practitioners exempted from the training and disciplinary restraints which the Medical Act imposed.

In 1914, on the occasion of the passing of the Tasmanian Opticians Act, another memorandum was drawn up by the late Mr. Brudenell Carter, formerly a member of the Council and a well known ophthalmologist, in which he declared the recognition of opticians to be superfluous for the purpose of legitimate trade and likely to be misleading and even dangerous as soon as the limits of such trade were overpast. In 1919, on a fresh petition for a charter—the former petition not having been granted—for the British Optical Association, the Council was asked whether its attitude remained as set out in the former memorandum, and the reply was that there had been no change in the attitude of the Council.

The memorandum now drawn up by the President, after recounting this past history, declares that the General Medical Council still considers it most undesirable in the interests of the public and highly dangerous to the community that persons who have not received a complete medical education should be authorized by law to deal with matters requiring knowledge which was pathological or medical, or both. A note is appended by Mr. L. H. Eason, ophthalmic surgeon to Guy's Hospital, and a member of the General Medical Council, who points out that the position of the medical profession in objecting to the registration of opticians has been further strengthened by the Report of the Royal Commission on National Health Insurance, which concurs in the view taken by the Ministry of Health that the medical practitioner must intervene in these cases, and proposes a specialist service to include ophthalmologists and also opticians, the functions of the latter to be limited to making up the spectacles prescribed. Mr. Eason also points out that however well qualified an optician might be in the mechanical process of examining a patient by question and answer as to which lenses put before his eyes best suited him, it was impossible without examination of the interior of the eye with the ophthalmoscope to state that the case was one of simple error of refraction, and for a proper appreciation of what might be seen in the eye and its relation to health or disease of other organs of the body a complete medical education was required. While symptoms such as headaches might be due to errors of refraction, they might also be due to high blood pressure or other serious causes, and there was always the danger of ascribing the headache to the eye condition when the cause was something wholly unconnected with the eye. True, when the specialist discovered that it was a simple error of refraction the optician might be able accurately to prescribe the necessary glasses, but as the patient had already been examined by a person with special knowledge of the eye the optician's examination would be superfluous. Further, Mr. Eason urged the unwisdom of granting recognition and registration to a body of persons who made their living by a special method of treatment and by the sale of special apparatus. These persons were likely to consider their method a panacea. Moreover, ophthalmic specialists informed patients when they did not need spectacles, whereas it was to the optician's interest to sell glasses even though they might not be necessary.

The Executive Committee resolved to request the President, with Mr. Eason, to give evidence on behalf of the Council before the departmental committee.

Other matters before the Committee included recent ordinances and proclamations in Wei-Hai-Wei, British Guiana, and Bechuanaland Protectorate, relating to medical practitioners, which call for no particular remark. The Council has published the sixth edition of the report as to the conditions under which medical and dental practitioners registered or legally qualified in their own country may practise abroad, and is proposing to publish a pamphlet giving information as to the procedure to be adopted by those who desire to enter the profession of medicine, with information as to costs and prospects.

REPORTS OF COMMITTEES.

Revised Warning Notice on "Covering."

The PRESIDENT, on behalf of the Executive Committee, brought forward a report on the Warning Notice of the Council (No. 7) dealing with "association with uncertified women practising as midwives." He said that the Midwives Act, 1902, relating to England and Wales, which was cited in the present Warning Notice, provided that "No woman shall habitually and for gain attend women in childbirth otherwise than under the direction of a qualified medical practitioner unless she be certified under this Act." In the Midwives and Maternity Homes Act, 1926, also relating to England and Wales, and in the Midwives and Maternity Homes (Scotland) Bill, which was ordered to be printed in February last, the following had been substituted:

"If any person, being either a male person or a woman not certified under this Act, attends a woman in childbirth otherwise than under the direction and personal supervision of a duly qualified medical practitioner, that person shall, unless he or she satisfies the court that the attention was given in a case of sudden or urgent necessity, be liable on summary conviction to a fine not exceeding ten pounds."

It had been thought desirable by the Executive Committee to amend the Warning Notice so that it should be brought into harmony with the wording of the new legislation, and after consultation with the legal adviser the following amended Warning Notice was submitted:

"*Association with Uncertified Persons Practising as Midwives.*—Whereas it has been made to appear to the Council that certain registered medical practitioners have from time to time, by their countenance or assistance, or by issuing certificates, notifications, or other documents of a kindred character, enabled uncertified persons to attend women in childbirth otherwise than under the direction and personal supervision of a duly qualified medical practitioner contrary to law,

"And whereas such conduct is in the opinion of the Council discreditable to the profession of medicine, and calculated to defeat the purpose of the Statutes made in the public interest for the protection of mothers and infants;

"Notice is hereby given that any registered practitioner who is proved to have so offended will be liable to have his name erased from the *Medical Register*."

(The reference to the Acts is omitted, and the words after "character" in the first paragraph have been altered; in the existing Warning Notice they ran: "*knowingly* enabled uncertified women, on pretence that such women were under their direction, to attend women in childbirth, contrary to law.")

The revised Warning Notice was adopted.

The Finance of the Council.

Sir HOLBURT WARING, senior treasurer, presented the finance report, from which it appeared that the income of the General and Branch Councils for 1926 was £16,090, and the expenditure £10,823. The surplus, which was added to the assets of the Council, was very similar to that of the previous year. Sir Holburt Waring gave the following figures for students' registrations:

1919	... ...	3,420	1923	... ...	545
1920	... ...	2,531	1924	... ...	1,053
1921	... ...	1,608	1925	... ...	1,070
1922	... ...	1,833	1926	... ...	1,260

The new registrations on the *Medical Register* and the total fees received were as follows:

1924	2,565	£12,825
1925	2,400	£12,000
1926	1,957	£9,785

The receipts from this source seemed likely to be small again in 1927. The question of the liability of the Council to income tax came before the Special Commissioners in 1926, and the claim for exemption was unsuccessful. In view of the magnitude of the interests involved it had been decided to appeal to the high court.

The Medical Curriculum.

A very brief report on educational matters was submitted by Dr. MACKAY, chairman of the Education Committee. He stated that the committee hoped to be able to present

a complete report on the readjustment of the medical curriculum, in accordance with the resolutions of the Council in 1922, to the November session. Since November last the registration of 92 students had been antedated in accordance with precedent. Of these, 23 were registered in England, 61 in Scotland, and 8 in Ireland. The registration of 21 dental students had also been antedated.

The PRESIDENT announced that, after many years of service as chairman of the Education Committee, Dr. Mackay was resigning that office. The committee had very regretfully accepted the resignation, and he was sure the Council would endorse the appreciation which the committee had expressed for the long-continued and earnest labours of its chairman. (Applause.) The new chairman of the Education Committee would be Sir Humphry Rolleston.

Examinations.

Sir NORMAN WALKER, chairman of the Examination Committee, submitted the analysis of the annual tables for 1926 showing the percentage of rejections by different bodies in various subjects. From this list it appeared that the highest percentage of rejections in medicine, surgery, and midwifery was at Apothecaries Hall, Dublin (respectively 61.5, 50, and 54.5 per cent.), the lowest in medicine was at Aberdeen (14 per cent.), in surgery, Edinburgh (15.4 per cent.), and in midwifery, Bristol (15 per cent.). The committee was undertaking the visitation of the examinations in pathology and materia medica and pharmacology, and it was hoped soon that this would be completed.

The Council agreed to resume the printing of the annual returns of exemptions from examinations and courses of study. This has been withheld during the last few years in the interests of economy.

The Diploma in Public Health.

Sir JOHN MOORE, chairman of the Public Health Committee, reported that during 1926 the number of candidates entering for the first examination for the diploma in public health was 260, of whom 195, or 75 per cent., passed, and 65, or 25 per cent., were rejected. For the second and final examination 205 candidates presented themselves, of whom 149, or 72.7 per cent., passed, and 56, or 27.3 per cent., failed. Applications for concessions with regard to the rules for the D.P.H. by those who had had special experience of public health work abroad had been refused. It was pointed out to the applicants that the D.P.H. entitled its holder to hold a position as medical officer of health in this country, and consequently the Council was not able to recognize work of a similar kind done abroad—for example, in cantonments in India—because the conditions were not such as to give the wide experience and to secure the special technical knowledge requisite for holding so important an appointment as medical officer of health in this country. The committee also laid it down that while recognizing that exemptions might be made in respect of a curriculum arranged by the universities and other licensing bodies, no exemption should be granted which would relieve a candidate from passing the complete examination for the diploma.

The British Pharmacopoeia.

The PRESIDENT presented the report of the Pharmacopoeia Committee, the principal matter in which was a paragraph of grateful acknowledgement of the services of Sir Nestor Tirard in various capacities in connexion with the *Pharmacopoeia* during the last thirty-two years. The President stated that the Committee on the *Pharmacopoeia*, which had been engaged in taking evidence on the subjects included in its reference, might be expected to report before the next session of the Council.

Dental Business.

Sir JAMES HODSDON brought forward a report of the Dental Education and Examination Committee which contained two recommendations with regard to colonial and foreign qualifications. One of these was that the degree of bachelor of dental science of the University of Melbourne be entered on the table of qualifications admitting to the Colonial List of the *Dentists Register*; the other that, pending the receipt of satisfactory information from the Japanese authorities, the qualifications of the recognized dental licensing bodies in Japan no longer continue to appear on the table of qualifications admitting to the Foreign List. These were agreed to.

The Council also considered certain disciplinary cases remitted from the Dental Board.

The first was that of Joseph Halliday Magee, registered as of St. Mary's Terrace, Tyne Dock, "Dentist, 1921," who was summoned on the charge of canvassing for the purpose of procuring patients. The Board had transmitted to the Council its finding that the name of Mr. Magee ought to be erased, but the Council, after hearing Mr. Magee, who had not been present at the Dental Board inquiry, decided to send back the case to the Board for further inquiry and report, and strongly recommended the respondent to attend if summoned.

In another case, that of Samuel Theodore Hilton, registered as of Manton, Worksop, "Dentist, 1921," who was also summoned on the charge of having canvassed for the purpose of procuring patients, the Council endorsed the finding of the Dental Board and ordered the Registrar to erase the name of Samuel Theodore Hilton from the *Dentists Registrar*.

The Council decided to restore to the *Dentists Register* the name of Samuel Robertson Crosbie on fulfilment of the prescribed requirements.

Election of Committees.

In the course of the session the following committees were elected:

Executive Committee.—Dr. Macdonald, Sir George Newman, Sir H. Rolleston, Sir Jenner Verrall, Sir Holburt Waring, Sir Robert Bolam, Sir J. Hodsdon, Sir L. Mackenzie, Sir Norman Walker, Mr. Sinclair, Sir Arthur Chance, Sir John Moore.

Dental Executive Committee.—The above, with Mr. Dolamore.

Education Committee.—Dr. Brackenbury, Dr. Griffith, Mr. Leathes, Sir George Newman, Sir H. Rolleston, Mr. Thelwall Thomas, Sir J. Hodsdon, Mr. Littlejohn, Dr. Mackay, Dr. Dixon, Dr. Kidd, Mr. Sinclair.

Examination Committee.—Sir Robert Bolam, Mr. Eason, Dr. Fawcett, Mr. Gamgee, Sir Holburt Waring, Dr. Wild, Dr. Mackintosh, Dr. Russell, Sir Norman Walker, Sir Arthur Chance, Dr. Coffey.

Public Health Committee.—Dr. Buzzard, Dr. Brackenbury, Mr. Eason, Sir George Newman, Mr. Thomson, Sir Jenner Verrall, Dr. Adams, Mr. Littlejohn, Sir L. Mackenzie, Dr. Kidd, Dr. Magennis, Sir John Moore.

Pharmacopoeia Committee.—The President (Chairman), Sir Robert Bolam, Dr. Dale, Mr. Leathes, Sir Humphry Rolleston, Sir Holburt Waring, Dr. Wild, Dr. Adams, Dr. Mackintosh, Sir Norman Walker, Dr. Kidd, Dr. Magennis, Sir John Moore.

Dental Education and Examination Committee.—Sir James Hodsdon (Chairman), Mr. Ackland, Mr. Dolamore, Sir Holburt Waring, Mr. Guy, Mr. Sinclair, the President (*ex officio*).

Finance Committee.—Sir Holburt Waring (Chairman), Sir George Newman, Sir James Hodsdon, Sir Arthur Chance, the President (*ex officio*).

Business Committee.—Sir Norman Walker (Chairman), Mr. Eason, Dr. Macdonald, Dr. Magennis, the President (*ex officio*).

Penal Cases Committee.—Dr. Eason, Dr. Macdonald, Sir Norman Walker, Sir Arthur Chance.

After certain formal business, including the reappointment of the General Registrar, Mr. Norman C. King, a vote of thanks was accorded to the President, on the motion of Sir NORMAN WALKER, who said that he believed this was the forty-sixth or forty-seventh session over which Sir Donald MacAlister had presided. The vote of thanks was seconded by Sir JOHN MOORE, and carried. Sir DONALD MACALISTER, in reply, said that he did not know whether it was the forty-sixth or forty-seventh, but in any case the number appeared to suggest that the end was not far distant. The loyal devotion of his colleagues, however, had greatly eased his path, and with regard to the session now ending in particular he felt that not only had something been attempted but something had been done.

DISCIPLINARY CASES.

Misleading Certification.

The Council considered the case of Jogesh Chandra Bose, registered as of Cherrywood Road, Birmingham, M.R.C.S., L.R.C.P., who was summoned on the charge that he had issued a certificate that a boy named William Hopkins was suffering from bronchitis and not able to attend school when in fact the boy had not been under his medical care nor had he seen or examined him. The Birmingham Education Committee was the complainant, represented by Mr. Digby Seymour, solicitor. Dr. Bose was accompanied by Mr. Oswald Hempson.

Mr. Seymour said that the certificate, having been obtained from Dr. Bose by the mother of the child, was sent to the head teacher, and in consequence the superintendent of school attendance officers went to see the mother, questioned her, and obtained from her a statement to the effect that the child had not been ill, but that, having been unwell herself, she had desired to keep the boy at home to look after the other children. Dr. Bose, when approached, admitted quite frankly that he had not seen the child when he gave the certificate (for which incidentally he

received sixpence). The boy's sister had come to him with a note from the mother, who was on his panel, saying that she had influenza and she thought "Willie" was sickening for it, and asking for a "sick note" for him. He then gave a certificate stating the child was suffering from bronchitis. The matter from this point, however, became more complicated, for the mother, Mrs. Hopkins, alleged that after Dr. Bose had been questioned by the education officer he visited her, told her of the difficult position in which he found himself, and promised her £50, and gave her some £3 in all at different times, to keep the matter out of court by sending another statement to the education officer denying her earlier assertions.

Mrs. Hopkins gave evidence as to being visited by Dr. Bose and receiving certain sums from him. She admitted writing to Dr. Bose asking him to lend her £2 as a favour "the same as I have done for you," and she declared that a second statement which she had written for the education authority exculpating Dr. Bose was written at the doctor's dictation. Mrs. Hopkins also stated that on the occasion of one of these visits Dr. Bose had made an improper suggestion to her, which she regarded as an insult, but she admitted under cross-examination that although she had resented this she had taken another £1 note from him the same evening. Mrs. Hopkins was closely cross-examined as to the credibility of her story, in particular why in her sworn statement she had never mentioned this improper suggestion, also as to what she meant by certain phrases in her letters to Dr. Bose, which the doctor had interpreted as threats, and in consequence had placed the matter in the hands of his solicitors. Mr. Hempson put it to the witness that her story as to receiving any money at all from the doctor was absolutely untrue, that she tried to get money from him and failed, and in consequence made the story up. This the witness strongly denied, and other members of her family were called to give corroborative evidence, but the chief of them fainted in the witness-box and cross-examination was abandoned.

The President asked Mr. Hempson whether it was necessary to go into all this matter, seeing that nothing was mentioned in the charge except the giving of a misleading certificate.

Mr. Hempson replied that the solicitor for the complainant had brought up this charge of bribery, and in the interests of his client he was bound to rebut it by testing the woman's story. Even if his friend had not mentioned the alleged bribery it appeared in the sworn statement of the woman, which had been circulated among members of the Council, and whether mentioned or not at the actual hearing, would have a subconscious effect on their minds.

The President then allowed Mr. Hempson to proceed.

Dr. Bose, in the witness-box, admitted giving the certificate without examining the child. From the mother's description he thought the child's illness was of the kind familiar to him in the then prevailing epidemic. He had no idea of giving a certificate merely to keep the child from school to look after the house. After the matter came before the education authorities he went to see the mother to ask her what she meant by certain statements, and she told him that the officer had asked her all sorts of questions, and she did not know what was written, but she signed it to get rid of him. Dr. Bose said that in that case she had better write out a proper statement, which she proceeded to do, though not at his dictation. He denied having given or promised her any money. As for impropriety there was nothing further from his mind. When he called there were several members of Mrs. Hopkins's family in the room, and he suggested to her that they should talk the matter over upstairs. He expressed his great regret for having given a certificate which was untrue, and undertook to be more careful in regard to the issue of certificates in the future. Five letters were put in testifying to his character and conduct.

The Council found that the fact alleged against Dr. Bose in the notice of inquiry—namely, that the certificate was given in a lax and careless manner, and was in fact untrue, misleading, or improper—had been proved. The Council regarded laxity in the giving of such certificates as a grave matter, which might result in serious injuries to patients and others, and worthy of severe censure; but judgement would be postponed until the November session, when Dr. Bose would be required to appear again, and to produce evidence from his professional brethren as to the conduct of his practice in the interval.

Qualification for Foreign List in Medical Register.

The Council proceeded to an inquiry whether the following entry in the Foreign List of the *Medical Register* had been correctly made:

Name.	Address.	Date of Registration.	Qualification.
Brinkley, John Richard	Milford, Kansas, U.S.A.	1925, December 14	M.D. U. Pavia, 1925

Mr. Harper, the Council's solicitor, said that this was an inquiry of an unusual character, and involved no disciplinary question. There was no suggestion against the good faith of Dr. Brinkley. Dr. Brinkley had got on to the British *Register* by an unusual route, and the present proceedings were taken under Section 26 of the Medical Act, 1858, whereby the Council could order erasure of an entry incorrectly made. From the conditions as to reciprocity laid down in the Medical Act, 1886, Part II, every practitioner who got on to the Foreign List was placed in exactly the same position as a British practitioner as to where he could practise. Dr. Brinkley had no wish to practise in the United Kingdom, but one of the areas to which reciprocity extended was Canada (all except two provinces), in which Dr. Brinkley, being in the United States, might wish to practise. It appeared that Dr. Brinkley had a number of diplomas, only one of which was in question here, a degree which he had obtained from the Eclectic Medical College, Kansas City, Missouri. Dr. Brinkley was minded to get on the British *Register* through Italy, with which country there had been reciprocity since 1901. He went to Italy in 1925, sat for an examination in the University of Pavia, and eventually received the diploma of that university, with licence to practise in Pavia, which was equivalent under Italian law, after certain formalities, to permission to practise anywhere in the kingdom of Italy. This diploma he produced in London, it was found to be in order, and accordingly he was entered on the British *Register*. Later, however, it appeared that the director of the Royal University of Pavia was doubtful whether the Eclectic Medical College of Kansas City, Missouri, whose degree Dr. Brinkley had presented, was a recognized institution, and an order went forth from Rome for the annulment of Dr. Brinkley's diploma, though he still possessed the certificate of having passed the State examination in Italy. It now appeared that under the new agreement with Italy as regards medical reciprocity, entered into in 1925, the year in which Dr. Brinkley was registered, both the certificate for the State examination and the diploma were necessary for registration. Hence, under the regulations now obtaining, Dr. Brinkley had been incorrectly registered.

Mr. Hempson said, on behalf of Dr. Brinkley, that he had planned no subterfuge to get or keep his name on the British *Register*. He had produced his degree to the authorities at Pavia, and had passed the necessary State examination in Italy. Mr. Hempson hoped the Council would make it plain by some *pronouncement* that they were satisfied as to Dr. Brinkley's *bona fides*. At the time he passed the State examination the reciprocity arrangements were such that he was justified in his claim to come on to the British *Register*. The new agreement, signed by Signor Mussolini and the British ambassador, was subsequent to his passing of the examination, though it was prior to his British registration.

The Council directed the Registrar to erase the entry which had been the subject of this inquiry, adding that the entry appeared to have been made upon information tendered in good faith by Dr. Brinkley, but now ascertained to be incorrect. The Council also directed that the registration fee which Dr. Brinkley had paid should be returned to him.

Alleged "Covering."

The Council, on May 25th and 26th, considered the case of John Morrison Lever, registered as of Savile Road, Chapeltown, Leeds, L.M.S.S.A., M.B., Ch.B., now practising in South London, who was summoned on the charge that he had enabled two women not certified under the Midwives Act, 1902, to attend women in childbirth under the cover or pretence that such women were attended or to be attended by him or by them under his direction, and that he signed a maternity benefit certificate enabling them in contravention of the same Act to practise as if they were certified.

Dr. Lever was accompanied by Mr. Charles Davis, of Messrs. Bulcraig and Davis, solicitors, and the London County Council was the complainant, and was represented by Mr. Pawlyn, assistant solicitor to that body.

Mr. Pawlyn stated that, with one exception, the women concerned in the case had refused either to make a sworn declaration or to attend before the Council to give evidence. He asked whether, in consequence, the sworn declaration of an inspector in the public health department of the Council could be put in. Mr. Davis objected on the ground that the declaration contained hearsay evidence.

The acting legal assessor to the Council (Mr. Douglas Bartley) said that the Council was a domestic tribunal, but at the same time the elements of natural justice must be followed as far as possible, and the evidence which it could admit must be approximately that which would be acceptable in a court of justice. The evidence proposed to be put in by the person who swore the declaration on purely hearsay evidence would not certainly be acceptable in a court of justice.

The Council decided to admit only such parts of the declaration as the witness could testify from his own knowledge.

Mr. Pawlyn said that it was clear that four women whose names were mentioned were attended at their confinement by an uncertified woman, and he was able to produce certificates for maternity benefit signed by Dr. Lever as the doctor in attendance, though in fact he was not in attendance at the time of the confinement.

Mr. Albert Garner, inspector for the London County Council, testified that he was present at the South-Western Police Court in June last, when one of the uncertified women was charged before the magistrate with having habitually and for gain attended women in childbirth otherwise than under the direction of a registered medical man. The charge was proved, but on account of her age the woman was merely bound over. Dr. Lever was not present in court, and his name was only casually mentioned by a witness.

Mr. Davis objected that the conviction of this woman was no evidence against Dr. Lever whatever, and he asked the Council to dismiss the case.

The President thought the case should proceed, and thereupon Dr. Lever gave evidence on his own behalf, denying that he ever had any arrangement with either of these women, that he gave any directions before the birth to any handywoman, or that in the cases mentioned he himself was not in attendance very shortly after the confinement. He was aware that handywomen were being employed, but in the district where he practised there was not a single qualified midwife within a radius of half a mile.

The examination of Dr. Lever was interrupted by Mr. Eason.

a member of the Council, who moved that "in order to expedite business" the Council deliberate on its procedure *in camera*. This was seconded by Sir Robert Bolam and agreed to, and after a short private session the PRESIDENT announced the decision of the Council as follows:

"The Council have heard the whole case of the complainant against Mr. Lever, and they have heard part of his defence. They have decided that the facts alleged against him in the Notice of Inquiry have not been proved to the satisfaction of the Council. The case is accordingly dismissed."

Cases Coming up for Judgement.

The Council considered the case, judgement in which had been postponed from May, 1926, of Samuel Grahame Connor, registered as of Oxford Street, M.B., C.M., with regard to whom it had been found that he had been convicted under the Dangerous Drugs Act (BRITISH MEDICAL JOURNAL, SUPPLEMENT, June 12th, 1926, p. 213). Dr. Connor attended and produced a large number of testimonials in his favour from practitioners and public men. The Director of Public Prosecutions wrote that he had no further information and did not propose to be represented at the adjourned hearing. The Council, after considering the testimonials, and also Dr. Connor's statement that he would be extremely careful with regard to the giving of drugs in the future, did not see fit to direct the Registrar to erase Dr. Connor's name.

The same result was arrived at in the adjourned case of Austin Heron, registered as of the West African Medical Staff, L.R.C.P.Irel., L.R.C.S.Irel., who had been found in 1925 to have been convicted of certain misdemeanours (SUPPLEMENT, June 13th, 1925, p. 261). Dr. Heron appeared and put in testimonials from the Commissioner of Police on the Cape Coast, the police magistrate of the Supreme Court, Gold Coast Colony, the medical officer of Cape Coast, and others, testifying to the satisfactoriness of his conduct. The Council decided not to direct the Registrar to erase Dr. Heron's name.

Association Notices.

TABLE OF DATES.

June 16, Thurs.	Meetings of constituencies must be held between this date and July 15th, to instruct Representatives
June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh). *A.R.M.* (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BORDER COUNTIES BRANCH: ENGLISH DIVISION.—The annual general meeting of the English Division will be held at the Crown and Mitre Hotel, Carlisle, on Friday, June 17th, at 3.30 p.m. Agenda: Election of office-bearers, 1927-28; proposal of Executive Committee that the Division adopt a resolution under its Ethical Rules in relation to the scale of minimum commencing salaries for public health medical officers. After the conclusion of the business cases will be demonstrated by Dr. Ablett and Dr. Cameron. Tea will be served at 4.30 p.m.

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—The annual meeting of the West Dorset Division will take place at the Antelope Hotel, Dorchester, on Thursday, June 16th, at 8.45 p.m. Agenda: Report of Council and instructions to representative; report of honorary secretary for 1926; election of officers, Executive Committee, and representatives on Branch Council. The meeting will be preceded by a supper at the Antelope Hotel at 7.30. Those proposing to attend the supper (5s. per head, exclusive of wines) are asked to notify the honorary secretary, Dr. J. A. Pridham, Hillfield, Broadway, Weymouth.

EAST YORK AND NORTH LINCOLN BRANCH.—The seventy-first annual meeting of the East York and North Lincoln Branch will be held on Friday, July 8th, when Dr. Frank Eve, the President-Elect, will be installed as President. Nominations of officers for the ensuing year must be in the hands of the honorary secretary not later than June 20th. Particulars as to place and hour of meeting, etc., will be announced later.

EDINBURGH BRANCH.—The annual meeting of the Edinburgh Branch will be held in the Scottish House of the Association, 6, Drumsheugh Gardens, Edinburgh (telephone: Edinburgh 24351), on Wednesday, June 15th, at 3.30 p.m. Tea will be served from 3.15. Business: Report of Branch Council, including the annual reports of Branch and of Divisions; treasurer's annual report and business; election of office-bearers for 1927-28; report of election of representative for 1927-28 for the Edinburgh and Fife Branches to the Council of the Association; election to the annual vacancy on the board of management of the Queen Mary Nursing Home; Annual Meeting of the Association in Edinburgh in July—reception by Branch; any other competent business.

KENT BRANCH.—The fourteenth annual meeting of the Kent Branch will be held at the Spa Hotel, Tunbridge Wells, on Wednesday, June 15th. The Council will meet in the morning. The President-Elect, Dr. F. R. B. Bisshopp, kindly invites each member attending and his wife to luncheon at the Spa Hotel at 2 p.m. Annual meeting, 3 p.m. Agenda: Report of the election of new officers, who thereupon take office; thanks to retiring officers; report of Branch Council and financial statement; appointment of auditor; inaugural address by the President. Garden party by the President and Mrs. Bisshopp at 4 p.m. Annual dinner (morning dress) at Spa Hotel (tickets 7s. 6d. each, exclusive of wines, which will be provided by the Tunbridge Wells Division), 7 p.m. Competition for the Tennyson-Smith golf challenge cup on the Spa Golf Club course.

LANCASHIRE AND CHESHIRE BRANCH.—The ninety-first annual meeting of the Lancashire and Cheshire Branch will be held at the Town Hall, King Street, Wigan, on Wednesday, June 22nd. 12.45 p.m.—Meeting of the Branch Council in the committee-room. 1 p.m.—Members will lunch in the old Council Chamber. 2 p.m.—Annual meeting in the new Council Chamber (by kind permission of the Mayor and Corporation). Agenda of Meeting: The chair will be taken by the President, Dr. H. T. Barton; report of Branch Council and financial statement; the chairman will introduce the President for the coming year, Dr. E. H. Monks, J.P., who will read his presidential address, entitled "Wigan: some medical biographies"; election of officers and two auditors for the coming year; vote of thanks to retiring officers and Branch Council; place of next annual meeting. 3 p.m.—Visits and excursions: (1) the Wigan library; (2) the parish church; (3) visit to Haigh Hall (by the kind invitation of the Earl of Crawford and Balcarres); (4) golf. The President will present a prize for the best net return for eighteen holes. To facilitate arrangements for lunch and the various excursions members are requested to notify the honorary secretary of the Wigan Division, Dr. F. L. Angior, Claremont, Wigan, of their intentions, as soon as possible.

LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.—The annual general meeting of the Hyde Division will be held in the Hyde Town Hall on Thursday, June 16th, at 4 p.m.

METROPOLITAN COUNTIES BRANCH.—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 21st, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) to sanction the necessary alterations in the rules of the Branch to enable the president-elect to become an *ex-officio* member of all committees; (5) presidential address by Mr. E. B. Turner, F.R.C.S., entitled "Influenza from 1889 to 1927: its therapeutic and clinical aspects."

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—The annual general meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, June 14th, at 9.30 p.m.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 14th, at 9 p.m. Mr. J. Paterson, C.B.E., will read a paper on internal haemorrhage.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—A clinical meeting of the Willesden Division will be held at the Municipal Hospital, Brentfield Road, on Tuesday, June 21st, at 3.30 p.m. Dr. G. F. Buchan has arranged for a demonstration by Dr. A. G. Troup, the medical superintendent, of the control of infectious diseases, including (1) Schick test and active immunization against diphtheria; (2) Dick test; (3) Schultz-Charlton reaction; (4) serum treatment of scarlet fever. Tea will be served. Members who intend to be present are asked to kindly advise the honorary secretary, 12, Craven Park Road, N.W.10.

NORTH OF ENGLAND BRANCH: TYNESIDE DIVISION.—A golf match has been arranged to take place between the South Shields and Tyneside Divisions on Sunday, July 3rd, at Brancepeth. Lunch, 1 p.m.; singles, 2 p.m.; tea, 5 p.m.; foursomes, 6 p.m. As the object of the meeting is to further social intercourse, it is hoped that all members who have ever wielded a club will do so on this occasion, and that others who do not play will also come.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH.—The annual meeting of the North Lancashire and South Westmorland Branch will be held at the Golf Hotel, Grange, on Wednesday, June 22nd, at 3.15 p.m. Ladies are invited.

NORTH WALES BRANCH.—The annual summer meeting of the North Wales Branch will be held at Penmaenmawr on Friday, July 8th. The President-Elect will entertain the members of the Branch to lunch, and Dr. Alfred Cox, the Medical Secretary of the Association, has promised to attend and address the meeting. Further details will be announced later.

SHROPSHIRE AND MID-WALES BRANCH.—There will be a clinical meeting of the Shropshire and Mid-Wales Branch at the Shropshire Orthopaedic Hospital, Oswestry, on Tuesday, June 14th, at 3.30 p.m., when Mr. Wilson Stuart will take the members round and demonstrate cases and methods. It is hoped that a large number will avail themselves of this very kind invitation of the hospital authorities. Tea will be provided.

SOUTH MIDLAND BRANCH: BEDFORDSHIRE DIVISION.—The annual meeting of the Bedfordshire Division will be held at the Swan Hotel, Bedford, on Wednesday, June 15th, at 3 p.m. Dr. Welch

invites the members to luncheon at the Swan Hotel at 1.15. Members who wish to accept Dr. Welch's kind invitation are asked to notify the honorary secretary by Monday, June 13th. There will be an Executive Committee meeting in Room 40 previous to the annual meeting. Agenda: Annual report; election of officers. Dr. R. A. Young, F.R.C.P., physician to Middlesex and Brompton Hospitals, will give an address on clinical instinct. Tea will be provided.

SOUTHERN BRANCH.—The fifty-fifth annual meeting of the Southern Branch will be held at Osborne House, East Cowes, Isle of Wight, on Wednesday, June 15th, at 3 p.m., when Major-General Sir S. G. Guise-Moores, K.C.B., C.M.G., will take the chair. Agenda: Correspondence; annual report of the Branch Council: financial statement for 1926; election of officers, 1927-28. At the conclusion of the above business Dr. Herbert French, C.B.E., F.R.C.P., will give an address "Concerning venesection by the needle and bottle method, and a number of other small points." Through the courtesy of the President the State apartments will be open for inspection to members and their ladies, who are invited to tea by Lady Guise-Moores. The management of Osborne Cottage Hotel have generously quoted a special tariff to members of the Branch for those who wish to take this unique opportunity of seeing the Isle of Wight, and it is hoped that many will do so.

SUSSEX BRANCH.—The fourteenth annual meeting of the Sussex Branch will be held in the Dolphin Hotel, Chichester, on Wednesday, June 15th, at 2 p.m. Agenda: Correspondence; election of officers; induction of President to chair; Annual Report and financial statement of Council. The President will demonstrate a few original instruments of use in general practice. The President-Elect (Dr. G. C. Garratt of Chichester) requests the pleasure of the company of those members who intend to be present at the annual meeting to luncheon at the Dolphin Hotel, Chichester, at 1 p.m. An excursion by char-a-banc will start from the Dolphin Hotel at 2.30 p.m., visiting first the ruins in Cowdray Park, and then Petworth House, where, by courtesy of Lord Leconfield, the famous picture gallery will be on view. Tea will afterwards be served at the Swan Hotel, Petworth.

SUSSEX BRANCH: BRIGHTON DIVISION.—A clinical meeting of the Brighton Division will be held at the Sussex County Hospital on Thursday, June 16th, at 3.45 p.m.

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.—The annual meeting of the Worcestershire and Herefordshire Branch will be held (by invitation of Dr. J. C. Smyth) at Ashfield, Great Malvern, on Thursday, June 16th, at 3.15 p.m. Agenda: Council's report on the affairs of the Branch and the annual financial statement; election of president, honorary secretary, and treasurer. At the conclusion of the business Mr. Ainslie will vacate the chair and introduce his successor, Dr. Naish. Mr. Ainslie will read a short paper. Dr. J. C. Smyth has very kindly invited the members to tea after the meeting.

YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.—The annual picnic of the Huddersfield Division will take place on Wednesday, June 15th. The char-a-banc will leave York Place at 12.30 p.m. for Malham. Afternoon tea will be served at the Airedale Private Hotel on arrival at Malham about 3 p.m. The afternoon will be spent in and around Malham. Gordale Scar and Malham Cove are both within easy walking distance and there will be time to walk to both. The char-a-banc will leave Malham at 6 p.m. for Skipton, where dinner will be served at the Black Horse Hotel at 7 p.m. The char-a-banc will leave Skipton at 8 p.m., and return via Ilkley to Huddersfield, where the party should arrive about 10 p.m. The inclusive charge for char-a-banc, tea, dinner (exclusive of drinks), and tips will be £1 a head; for those going in their own cars 10s. a head. Arrangements for the dinner must be completed by Saturday, June 11th.

Meetings of Branches and Divisions.

CONNAUGHT BRANCH.

THE annual general meeting of the Connaught Branch was held at the Railway Hotel, Galway, on May 13th, when Dr. R. L. ROE was in the chair.

Dr. Roe was re-elected president, and Dr. Mills honorary secretary and representative in the Representative Body, and Dr. E. S. Foley was appointed deputy representative.

The Report of Council was considered and questions asked about it, to which the HONORARY SECRETARY replied.

Some discussion took place regarding the smallness of fees offered by insurance companies to medical men, and the small salaries offered to permanent medical officials in Mayo and Leitrim. The matter was postponed for further consideration.

KENT BRANCH.

A MEETING of the Kent Branch was held at Ashford on March 11th, when poliomyelitis was discussed.

The PRESIDENT read a letter from Dr. W. L. Aycock, director of the Research Laboratory, Boston, U.S.A., regretting that his return to America prevented his attendance; he made several suggestions resulting from his investigations in England and the United States. Dr. A. M. WATT, medical officer of health, gave an account of the epidemic at Broadstairs; Dr. H. M. RAVEN spoke of the clinical points which he had noticed.

Dr. REGINALD MILLER said that one fact which clearly emerged in this epidemic was the length of the incubation period of the disease. The three patients who left the town and developed the disease later showed an incubation period of not less than six days, probably nearer nine. This was important, and it should be noted that it could not be ascertained until late in the epidemic. A second fact was less certain—namely, the sudden onset of the epidemic. In the later stages of the outbreak "abortive" cases would be recognized and notified, but this would almost certainly not be the case in the early days of the epidemic. Thus it was possible that the epidemic did not develop so abruptly as the charts shown seemed to indicate; if it did, it would be in favour of a food-borne epidemic rather than one spread by contact or carriers. He thought that the time was not yet ripe for any fixed policy in this disease. Against the view that poliomyelitis was spread from case to case by contact was the fact that it did not occur in a hospital ward. Some had thought that in the epidemic form, at any rate, the disease was contagious for a short while during the prodromal or early stage, and it was difficult to be sure that no case was at any time infectious. The current view was that the spread of the disease was by means of carriers; an epidemic was preceded by a "carrier epidemic," and this unsuspected wave suddenly gave rise to an outbreak of definite cases. By this time all those susceptible had either become immune or else suffered from the disease. He would not like, however, to base a policy on such speculations. Thirdly, came the theory that the disease owed its spread to infected food, particularly milk, and Professor Aycock of Harvard thought that he had definitely traced two American epidemics to infected milk. Although at first sight poliomyelitis seemed to originate in an infection of the nasopharynx and so to be more likely to be an air-borne rather than an ingested infection, the example of diphtheria indicated that this point could not be pressed too far. It was certainly unsafe, in view of Professor Aycock's evidence, to assume that infected food was an impossible explanation of an epidemic. Last came the suggestion of spread by means of dust and flies. With the summer incidence of poliomyelitis it was difficult to exclude such a possibility, especially if the disease could be a food-borne infection. Dr. Miller therefore concluded that there was not enough known about the spread of the disease to say that this or that precaution was unnecessary. Every possible source of spread should at present be considered.

Drs. GIBB (Maidstone), W. J. TYSON (Folkestone), ALFRED GREENWOOD (county medical officer), TENNYSON SMITH (Orpington), and E. A. STARLING (Tunbridge Wells) took part in the discussion.

The PRESIDENT, in the name of the Branch, thanked Dr. Reginald Miller for the interest and value of his paper, and also stated that the Branch Council had that morning appointed a small subcommittee to collect information and keep in touch with any further developments.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

THE annual meeting of the Willesden Division was held at the Municipal Clinic, Willesden Green, on May 18th, at 9 p.m.

The annual report showed a balance in hand of 13s. 11d.; balance of emergency fund, £15 11s. 7d.; dinner account, £5 11s. 6d. Seventeen members contributed £17 17s. to the Willesden District Nursing Association. The membership had increased from 88 to 102. Nine meetings were held, with an average attendance of 15.5. After the approval of the report, Dr. G. C. ANDERSON, Deputy Medical Secretary, gave an interesting address on the work of the British Medical Association during the past year. He answered numerous questions by Drs. R. GILLBARD, C. F. T. SCOTT, J. W. BRASH, W. LOCK, and KATE O'BRIEN, and was, on the motion of Dr. LOCK, seconded by Dr. G. F. BUCHAN, accorded a very hearty vote of thanks.

The following officers were elected:

Chairman, Dr. J. W. Brash. *Vice-Chairman*, Dr. R. Gillbard. *Honorary Secretary*, Dr. William Paterson. *Honorary Clinical Secretary*, Dr. J. Freeman Heal.

The CHAIRMAN, with appropriate remarks, then invested his successor, Dr. J. W. Brash, with his badge of office, and was accorded a hearty vote of thanks on the motion of Dr. C. F. T. SCOTT, seconded by Dr. SKENE.

Dr. George F. Buchan was thanked for arranging for the accommodation of the meeting.

NORTH OF ENGLAND BRANCH: GATESHEAD DIVISION.

A MEETING of the Gateshead Division was held on May 11th. The following were elected as office-bearers:

Chairman, Dr. Smallwood. *Vice-Chairman*, Dr. Taylor. *Honorary Secretary and Representative in Representative Body*, Dr. Forbes. *Deputy Representative in Representative Body*, Dr. Stich.

The Annual Report of Council, 1926-27, was considered, and the following amendments adopted for submission at the Annual Representative Meeting in Edinburgh:

(*a*) That in the opinion of this meeting the Council has exceeded its instructions and failed to realize the basic policy set forth in Minutes 57, 58, and 59, Annual Representative Meeting, 1925.

(*b*) That the Representative Body disapproves of the policy advocated in relationship to the advertisement of pathological institutes such as is referred to in the first recommendation of Council upon pathological institutes, and instructs the Council to summarily exclude advertisements of such pathological institutes from the columns of the BRITISH MEDICAL JOURNAL, this seeming to be in accord with the views expressed in Paragraph 91.

(*c*) That Minute 92 be amended as follows: After the words "a confinement" add "or any condition arising directly out of parturition," and after "Midwives Act, 1918," *read* "*but that the time limit of* twenty-eight days should be removed and the local supervising authority be responsible for the fees of medical practitioners under a similar scale until such time as the patient is removed from hospital."

Circular D.11 issued from headquarters relating to medical charities was considered, and Dr. A. Benham Stich was appointed charities secretary.

OXFORD AND READING BRANCH: WINDSOR DIVISION.

At the annual meeting of the Windsor Division, held on May 6th, the following officers were elected:

Chairman, Dr. Goff. *Vice-Chairman*, Dr. Hathaway. *Honorary Secretary*, Dr. Casson. *Representative on Representative Body*, Dr. Hathaway. *Deputy Representatives in Representative Body*, Drs. Goff and Tomlinson.

Considerable disagreement was expressed with the recommendation of Council on orthopaedic centres and clinics for the treatment of early mental disorders, as it was felt that orthopaedic specialists and mental specialists respectively were the best people to undertake the work. It was decided to instruct the representative on these points.

A letter on the Dogs Bill, drawn up at the request of the meeting, has been sent to local members of Parliament.

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

The State and Medical Practice.

By BRIGHTON: That the Representative Body, viewing with considerable concern the insidious inroads continually being made on private medical practice under the auspices of the State, voluntary bodies and others, and being of opinion that this is not only detrimental to the interests of the individual members of the medical profession but ultimately to all classes in the community, instructs the Council to watch all such developments and actively to interest itself in safeguarding private practice amongst all groups in the medical profession and to develop through the Branches and Divisions closer co-operation with the local medical profession for that purpose.

Whole-time Medical Officers and Medical Practice.

By TUNBRIDGE WELLS: That the Representative Body views with anxiety the increasing tendency to transfer the treatment of many diseases and conditions to whole-time medical officers as detrimental to the public health; that in the opinion of the Representative Body the general adoption of the following principles would result in benefit both to the public and the profession:

(1) The function of the health authority should be confined as much as possible to the prevention of disease.

(2) The work of the whole-time officer should be confined to administration, inspection, institutional, or consultative work.

(3) Health visitors should be definitely responsible for treatment to a local practitioner for all cases treated by them, including expectant mothers.

Pathological Reports.

By BRIGHTON: That para. 89 (c) of the Annual Report of Council be amended by the addition of the words "except at the request of the practitioner," and that words be added to make it clear that dental practitioners are included throughout para. 89.

Varieties of Pathological Institutes.

By BRIGHTON: That the third recommendation in para. 96 of the Annual Report of Council be amended by the deletion of para. (iii).

British Medical Journal.

By BRIGHTON: That, whilst recognizing the responsibility for all that appears in the BRITISH MEDICAL JOURNAL and its SUPPLEMENT as defined in Article 38 of the Association, the Representative Body is of opinion that these periodicals should be open to communications from any members commenting, favourably or otherwise, either on the policy of the Association in regard to the medical and allied sciences or on a communication inserted by a department of the Association.

Contributory Schemes for Hospital Benefit.

By BRIGHTON: That in view of the inroads being made into private medical practice by the contributory schemes which are springing up all over the country, the Representative Body is of opinion:

(a) That members of a contributory scheme should be regarded no longer as objects of charity, and therefore that the full cost of benefits offered should be covered by the premiums, with or without supplementary payments, paid by or for the members, and

(b) That the time has come to express its policy concisely in certain cardinal principles as set out below, and instructs the Council actively to engage itself during the coming year by means of conferences with committees of such schemes, hospital authorities, staffs of hospitals, Branches and Divisions and otherwise with a view to securing their general adoption:

(i) That the income limit for membership of a contributory scheme should not exceed the maximum scale as it appears in the Hospital Policy of the Association.

(ii) That so far as is possible and consistent with the best interests of the members, arrangements for consultative or specialist services should be made with private practitioners rather than with a voluntary or cottage hospital.

(iii) That for this purpose (a) there should be free choice of private practitioner by member and of member by private practitioner; and (b) the method and amount of remuneration should be determined by the local medical profession.

(iv) That except in emergency a member should be admitted to benefit only upon the introduction of the attending practitioner.

(v) That recognition should be made of the services of the medical staff of the hospital attending members not by a percentage of the money received by the hospital from a contributory scheme, but by a method and amount determined by the local medical profession.

[In order to assist in determining the method and amount of remuneration to be asked for the respective specialist services, the local medical profession should consider (i) payment for work done on a tariff of fees; (ii) payment on a session basis; (iii) payment by an amount to be determined annually or for a period of years; (iv) payment by a combination of two or more of the above ways.]

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander R. F. Quinton to the *Valiant*.

Surgeon Lieutenant Commanders J. F. Ainley to the *Iron Duke*, and as Specialist in Ophthalmology, temporary (amended appointment); C. N. Ratcliffe to the *President*, additional for three months' post-graduate course.

18s. 6d.—David M. Brown.

17s. 6d.—C. G. Seymour, H. S. Anderson, G. A. Macdonald, R. G. McIntyre, J. M. Loftus.

16s.—W. S. D. Bird.

10s. 6d.—F. M. Thomson, J. P. H. Helliwell, G. G. Wales, E. F. H. Bell, Alexander Walk, T. E. Gordon, J. S. Arkie, R. N. Aston, L. E. Wigram, William Denness, Morris Cutner, J. S. Clark, J. W. Morris, Robert Todd, C. W. Healey, A. H. Kynaston, E. N. Butler, C. W. Pilcher, J. M. Morris, Douglas S. Pracy, C. J. Lewis, S. J. Parkhill, P. M. Shepherd, Alexander Sutherland, J. T. McOuat, Robert Wilson, P. A. Newton, Angus Lamont, J. V. Salvage, G. W. Rogers, C. R. Willans, John Wood, L. M. Mayers, N. S. Turnbull, Helen M. Jardine, Gladys Rutherford, H. C. Sinderson, W. A. Bruce Young, Gladys Matthews, A. C. J. Elwin, D. G. Anderson, L. M. Ingle, P. H. Benson, David Bowen, A. M. Forster, G. Clark, Leslie W. W. Smith, Tressie Pires, E. Parry Evans, Hugh M. Boston, Winifred M. Hume, A. Mindosh, H. Campbell Highet, D. M. Mackay, W. E. Haigh, A. G. Ogilvie, L. W. Oliver, A. I. Clarke.

10s.—Sir T. Jenner Verrall, Olive G. Potter, R. B. F. McKail, C. W. Johnson, A. Brown Watt, W. E. Fairweather, J. F. Blackett, E. B. Ffennell, Donald Macdonald, D. J. McLeish, A. D. Yule, E. Shaw, K. M. Bowman-Manifold, John Cowper, E. H. Snell, C. P. O'Brien, Isabell M. G. Butler, P. Heffernan, Madeline Parker, J. E. Wood, Alexander R. McClure, Louis Turiansky, Janet McL. Stewart, T. L. Craig, P. J. Corcoran, C. G. Schurr, A. T. Evans, N. H. Wells.

Contributions of less than 10s. amounted to £10 16s. 6d.

Association Notices.

TABLE OF DATES.

June 25, Sat.	Supplementary Report of Council appears in SUPPLEMENT.
July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date.
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh). *A.R.M.* (Edinburgh).
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of the Bath Division will be held at the Spa Hotel, Bath, on Wednesday, June 29th, at 4 p.m. Agenda: Report of the Executive Committee; report of the Spa Subcommittee; to elect officers, representatives on the Branch Council, and ordinary members of Executive Committee; report of Executive Committee as to the scale of minimum commencing salaries for public health medical officers, and recommendation of Executive to adopt resolution under its Ethical Rules.

BORDER COUNTIES BRANCH: ENGLISH DIVISION.—The annual general meeting of the English Division will be held at the Crown and Mitre Hotel, Carlisle, to-day (Friday, June 17th), at 3.30 p.m. Agenda: Election of office-bearers, 1927-28; proposal of Executive Committee that the Division adopt a resolution under its Ethical Rules in relation to the scale of minimum commencing salaries for public health medical officers. After the conclusion of the business cases will be demonstrated by Dr. Ablett and Dr. Cameron. Tea will be served at 4.30 p.m.

EAST YORK AND NORTH LINCOLN BRANCH.—The seventy-first annual meeting of the East York and North Lincoln Branch will be held on Friday, July 8th, when Dr. Frank Eve, the president-elect, will be installed as president. Nominations of officers for the ensuing year must be in the hands of the honorary secretary not later than June 20th. Particulars as to place and hour of meeting, etc., will be announced later. The first annual competition for the Ritchie Rodger golf cup—open to members of the East York Division—will be held on the Brough golf course on Friday, June 24th. The competition will be eighteen holes, medal play under handicap—limit 24. Entrants will arrange their own partners and may play at any time during the day convenient to themselves. Non-members of the Brough Golf Club will be required to pay their own green fees. Cards, which must be signed by the marker, should be handed to Dr. Morton Stewart, or to the secretary of the Brough Club, immediately on completion of the round.

LANCASHIRE AND CHESHIRE BRANCH.—The ninety-first annual meeting of the Lancashire and Cheshire Branch will be held at the Town Hall, King Street, Wigan, on Wednesday, June 22nd. 12.45 p.m.—Meeting of the Branch Council in the committee room. 1 p.m.—Members will lunch in the old Council Chamber. 2 p.m.—Annual meeting in the new Council Chamber (by kind permission of the Mayor and Corporation). Agenda of meeting: The chair will be taken by the president, Dr. H. T. Barton; report of Branch Council and financial statement; the chairman will introduce the president for the ensuing year. Dr. E. H. Monks, J.P., who will read his presidential address, entitled "Wigan: some medical biographies"; election of officers and two auditors for the year 1927-28; vote of thanks to retiring officers and Branch Council; place of next annual meeting. 3 p.m.—Visits and excursions: (1) the Wigan library; (2) the parish church; (3) visit to Haigh Hall (by the kind invitation of the Earl of Crawford and Balcarres); (4) golf. The president will present a prize for the best net return for eighteen holes. To facilitate arrangements for lunch and the various excursions members are requested to notify the honorary secretary of the Wigan Division, Dr. F. L. Angior, Claremont, Wigan, of their intentions, as soon as possible.

METROPOLITAN COUNTIES BRANCH.—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 21st, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) to sanction the necessary alterations in the rules of the Branch to enable the president-elect to become an *ex-officio* member of all committees; (5) presidential address by Mr. E. B. Turner, F.R.C.S., entitled "Influenza from 1889 to 1927: its therapeutic and clinical aspects."

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, July 5th, at 9.30 p.m. Dr. T. H. G. Shore, curator of the museum, St. Bartholomew's Hospital, will give a demonstration of pathological specimens with clinical notes. A clinical meeting arranged by the consulting staff will be held at the Children's Hospital, Hackney Road, on Wednesday, July 6th, at 4 p.m. Tea will be provided. A clinical afternoon will take place at the Metropolitan Hospital on Friday, July 8th, at 4.15; tea at 4 p.m.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, June 21st, at 8.45 p.m. Dr. George Graham will read a paper on the treatment of diabetes mellitus.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—A clinical meeting of the Willesden Division will be held at the Municipal Hospital, Brentfield Road, on Tuesday, June 21st, at 3.30 p.m. Dr. G. F. Buchan has arranged for a demonstration by Dr. A. C. Troup, the medical superintendent, on the control of infectious diseases, including (1) Schick test and active immunization against diphtheria; (2) Dick test; (3) Schultz-Charlton reaction; (4) serum treatment of scarlet fever. Tea will be served. Members who intend to be present are asked to kindly advise the honorary secretary, 12, Craven Park Road, N.W.10.

NORFOLK BRANCH.—The annual meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital on Wednesday, July 6th, at 3 p.m. The president, Dr. W. H. Fisher, will be in the chair. Agenda: Report of the Branch Council on the affairs of the Branch, and the annual financial statement; induction of the new president, Sir Hamilton Ballance, K.B.E., C.B., M.S., by the retiring president; election of a president-elect and two vice-presidents; an address by Mr. Ernest Miles, F.R.C.S., on anorectal fistula.

NORTH OF ENGLAND BRANCH.—The annual meeting of the North of England Branch will be held at the Queen's Head Hotel, Morpeth, on Thursday, June 30th. Programme:—12.30 p.m.—Business meeting. Agenda: Annual report and financial statement of the Branch Council; to elect officers for the ensuing year. 1.15 p.m.—Luncheon: the incoming president, Dr. F. Beaton, has expressed a desire to entertain the members present to lunch. Those who intend to accept this invitation are asked to notify the honorary secretary, Mr. Norman Hodgson, M.S., F.R.C.S., 7, Windsor Terrace, Newcastle-on-Tyne, not later than Monday, June 27th, as only those who give notice will be provided for. 3 p.m.—The annual golf competition for the cup presented by Dr. D. F. Todd will take place on the Morpeth golf course; those intending to compete are asked to notify the honorary secretary, stating their club handicap. For those who do not play golf, a visit has been arranged to Newminster Abbey and private grounds, by kind permission of Sir George Kenwick, also a visit to Mitford village and church if time permits. Members are asked to notify the honorary secretary if they wish to go with this expedition. 5 p.m.—Tea will be served at the Queen's Head Hotel.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, to-day (Friday, June 17th), at 8.30 p.m. Agenda: Correspondence; report of executive committee: (*a*) ethical case, (*b*) relation of public service to general practitione (*d*) medical defence, (*e*) colliery arrears, (*f* Annual Report of Council; instructions to business.

NORTH OF ENGLAND BRANCH: TYNESIDE DIVISION.—A golf match has been arranged to take place between the South Shields and Tyneside Divisions on Sunday, July 3rd, at Brancepeth. Lunch 1 p.m.; singles, 2 p.m.; tea, 5 p.m.; foursomes, 6 p.m. As the object of the meeting is to further social intercourse, it is hoped that all members who have ever wielded a club will do so on this occasion, and that others who do not play will also come.

NORTH LANCASHIRE AND SOUTH WESTMORLAND BRANCH.—The annual meeting of the North Lancashire and South Westmorland Branch will be held at the Golf Hotel, Grange, on Wednesday, June 22nd at 3.15 p.m. Business: Election of office-bearers; annual report financial report; names of the members of the Branch Council Charities Organization Committee; any other business. The president, Dr. E. Jackson of Carnforth, will give an address entitled "Some reminiscences of my experience during fifty years in the practice of medicine." The president and Mrs. Jackson invite all present to tea. Ladies will be welcomed.

NORTH WALES BRANCH.—The annual summer meeting of the North Wales Branch will be held at Penmaenmawr on Friday, July 8th. The president-elect will entertain the members of the Branch to lunch, and Dr. Alfred Cox, the Medical Secretary of the Association has promised to attend and address the meeting. Further details will be announced later.

OXFORD AND READING BRANCH: OXFORD DIVISION.—The next meeting of the Oxford Division will be held at the Radcliffe Infirmary on Wednesday, June 22nd, at 2.45 p.m. Agenda: Instructions, if any, to representative to Annual Representative Meeting at Edinburgh; several cases of considerable clinical interest will be shown.

SOUTH WALES AND MONMOUTHSHIRE BRANCH: SWANSEA DIVISION.—The annual meeting of the Swansea Division will be held at the General Hospital, Swansea, on Thursday, June 23rd, at 8.30 p.m. Agenda: Annual report of the Executive Committee; election of officers—(1) (*a*) chairman, (*b*) vice-chairman, (*c*) secretaries (2) president-elect of Branch; (3) five representatives on Branch Council; (4) other members of Executive Committee; (5) repre

entative on Welsh Committee; (6) representatives on Welsh Standing Contract Practice Subcommittee. Coffee will be provided. A meeting of the Executive Committee will be held at 7.30 p.m.

WILTSHIRE BRANCH: TROWBRIDGE DIVISION.—A social meeting of the Trowbridge Division will be held at Lacock on Wednesday, June 22nd, at 3 p.m. Members may bring friends. Miss Talbot has kindly offered to conduct the party over Lacock Abbey. The party will assemble at the Red Lion Inn, in the yard of which cars may be parked. Admission to the Abbey, 4s. per head. Tea at Red Lion, 1s. per head. Members intending to be present are asked to notify the honorary secretary, Dr. A. D. Hamilton, Bridge Cottage, Lacock, by June 18th.

YORKSHIRE BRANCH: SHEFFIELD DIVISION.—A general meeting of the Sheffield Division will be held at the Church House, St. James Street, Sheffield, on Friday, June 24th, at 8.30 p.m. The principal item on the agenda is the Annual Report of Council (BRITISH MEDICAL JOURNAL SUPPLEMENT, April 23rd), which is of more than usual interest this year, and contains a number of important recommendations upon which the decisions of the Division are asked. The meeting provides to every member an opportunity of sharing in the government of the Association and of influencing its policy, and it is earnestly hoped that there will be a large attendance.

Meetings of Branches and Divisions.

GLASGOW AND WEST OF SCOTLAND BRANCH.

THE annual meeting of the Glasgow and West of Scotland Branch was held in the Western Infirmary, Glasgow, on May 17th, with an attendance of about 50. Dr. J. P. BROWN, D.S.O. (Campbeltown), occupied the chair.

After the annual report of the Branch Council and the financial statement for the year 1926 had been submitted and approved, the CHAIRMAN installed Dr. James Hill of Renfrew as president for the ensuing year.

The following officers were thereafter elected:

President-Elect, Dr. R. M. Buchanan (Glasgow). *Vice-Presidents*, Dr. George A. Allan (Glasgow), Dr. J. P. Brown, D.S.O. (Campbeltown). *Honorary Secretary*, Dr. J. G. McCutcheon (Glasgow). *Honorary Treasurer*, Dr. A. S. Richmond (Glasgow).

After tea, kindly provided by the superintendent and managers of the Western Infirmary, the medical staff gave a clinical demonstration of cases, covering medicine, surgery, and the specialties. At the close of the clinical meeting, which was attended by about 150 members, the chairman, Dr. JAMES HILL (Renfrew) proposed a vote of thanks to the members of the staff for their kindness.

During the course of the afternoon a collection was taken for the British Medical Association's Charities Fund, and £20 3s. was handed over.

KENT BRANCH: DOVER DIVISION.

AT a meeting of the new Dover Division on May 19th at Deal, with Dr. MCMASTER in the chair, Mr. W. G. SUTCLIFFE read a paper on glands in the neck.

Mr. Sutcliffe commented on the decrease in gland cases during the last twenty years, which he attributed to the care now devoted to the nose, throat, and teeth, and to the greater cleanliness of the milk supply. The main source of infection in the case of tuberculosis of the cervical glands was undoubtedly the tonsil, the so-called tonsillar gland or group which made up the superficial and deep glands of the anterior triangle being nearly always the first to enlarge. Two other common types of gland enlargement were the septic mixed infection in young children and the adenitis which followed the specific fevers, especially influenza, when the throat and nose had been affected. In the first of these streptococci and tubercle bacilli were chiefly concerned, and a sudden feverish attack was followed by the rapid appearance of a large swelling, usually in the anterior triangle. After a few days the size of this diminished and an easily palpable gland was left, or, more commonly, the skin became reddened and an abscess developed. Surgical intervention should be avoided if possible; if pus formed it should be evacuated by a simple incision, and no attempt should be made at complete dissection lest a severe general septic infection be caused. The glands of the second type were best treated by rest and the application of belladonna. If it seemed that a tuberculous process was developing, general treatment in a suitable environment should be given and surgical intervention avoided. For definite tuberculous glands with a swelling of more than six months' duration radium, *x* rays, sunlight, and ultra-violet rays might be used, though, if suppuration followed, surgical treatment became necessary. Mr. Sutcliffe discussed the various therapeutic procedures in detail, and emphasized the importance in all cases of tonsillectomy, where required, and rest. Special efforts must be made to trace and remove any foci of infection in the tonsils, adenoids, sinuses, or teeth. When an abscess was connected with broken-down glands he advocated removal of these glands at the time of dealing with the abscess, and said that he had not seen cellulitis or spread of the disease caused by this. A little more time was needed for the healing of the wound, and it might be necessary to remove undermined skin or make counter-openings for drainage if the pus had burrowed downwards; but once the deep fascia had been opened up the operation presented no more than the average difficulty. Unless the internal jugular vein was seen at the bottom of the wound it was certain that some glands had been overlooked and that recurrence would follow.

MALAYA BRANCH.

THE annual general meeting of the Malaya Branch was held in the Medical Research Institute, Kuala Lumpur, on April 15th, when the president, the Hon. D. A. L. Hoops, was in the chair.

The following officers nominated by the Council were unanimously elected:

President-Elect, The Hon. Sir David Galloway. *Vice-Presidents*, Singapore—Dr. Chen Su Lan; Federated Malay States—Dr. Cosgrave; Penang—Dr. Taylor. *Honorary Secretary*, Dr. Scharff. *Honorary Treasurer*, Dr. Copeland.

It was decided in future to send in good time a circular to members asking for suggestions as to the filling of the vacancies which will occur in the composition of the Council for the ensuing year.

The meeting agreed to change the name of the Native States Division to that of the Federated Malay States Division. It was resolved that the editor-in-chief of the *Malay Medical Journal* and the representatives of the Society of Medical Officers of Health should be *ex-officio* members of the Council, which it was further decided should not exceed nineteen members. It was resolved to increase the subscription to $17.

The report of the honorary secretary and treasurer, together with the financial statement, were adopted.

In an address the retiring president, Dr. Hoops, gave details of the activities of the Branch since the last annual general meeting.

Dr. C. MACASKILL thanked the president for his address and referred to the loss sustained by the Branch on the retirement of Dr. Stanton, who, but for his transference to an important appointment in London, would have been president of the Branch for the coming session. He also referred to the impending departure of Sir Laurence and Lady Guillemard, and on his proposal a resolution was carried unanimously expressing the regret of the Council and members of the Branch at their departure, and recording appreciation of the earnest and active support given by them to every public health movement in Malaya.

Dr. Hoops, having retired from the chair, was succeeded by Dr. MACASKILL, who delivered the presidential address, taking as his subject "The solitariness of the sick." On the motion of Dr. KINGSBURY, seconded by Dr. G. C. MCGREGOR, a vote of thanks to the president for his interesting and thoughtful address was carried with acclamation.

The honorary treasurer was authorized to send at his own discretion a contribution for 1927 to the Royal Medical Benevolent Fund equivalent to 50 cents per member. The meeting also agreed that an appeal should be sent to all members asking them to contribute up to a maximum of $5 for the purpose of adding to the sum available for this worthy charity.

Some discussion took place on the drug fees levied by the Government in the Federated Malay States, and the following motion, proposed by Dr. MACASKILL, was carried:

> This meeting, representative of the medical profession in Malaya, regard as inadvisable the inclusion of Subsection 3 of Clause 4 of amended enactment No. 10 of 1911, now known as Enactment No. 9 of 1923, whereby in the Federated Malay States an annual fee of 20 dollars for a deleterious drug licence is imposed on all unofficial registered medical practitioners possessing and/or using, in the course of their practice, certain deleterious opiate drugs such as morphine, cocaine, heroin, eucaine. The meeting would point out that such fee is not charged either in the Straits Settlements or any of the Non-Federated Malay States. As these drugs are extensively used in the legitimate practice of medicine, and, as such, must be regarded as an essential part of modern medical equipment, the meeting considers that the imposition of a fee is unjustifiable and requests that Subsection 3 of Clause 4 of the above enactment be repealed.

Correspondence from the Kedah Planters' Association, forwarded by the principal medical officer for the views of the British Medical Association, was discussed. It was decided to point out to the P.M.O. that the Planters' Association was under a misconception with regard to the regulation of the higher Indian degrees, and also to the registration of dressers, inasmuch as possessors of Indian qualifications registrable in Great Britain could, after registration, practise there. There was no registration of dressers in force.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

THE annual general meeting of the South-West Essex Division was held in the Wesleyan Schoolrooms, High Road, Leyton, on May 31st.

Dr. PANTING briefly introduced the Annual Report of Council, pointing out the important work being done by the British Medical Association in many directions.

The following officers were elected for the session 1927-28:

Chairman, Dr. A. T. Todd-White. *Vice-Chairman*, Dr. W. Badenoch. *Honorary Secretary and Treasurer*, Dr. Helen Jardine.

Mr. A. J. COUZENS, F.R.C.S., spoke on personal experiences of abdominal disease, mainly from the diagnostic standpoint. He stressed the importance of an analysis of the patient's symptoms in the early stages of disease. Attention was directed to lesions of the abdominal wall and retroperitoneal space, often forgotten in abdominal cases. Collapse was, he said, the one characteristic symptom of abdominal catastrophe. The danger of operation during the period of shock was pointed out, and the difficult position of the general practitioner in regard to the giving of morphine before sending the patient to hospital was discussed. Severe haemorrhage into the abdominal cavity due to a ruptured Graafian follicle was mentioned. In dealing with chronic abdominal disease Mr. Couzens said that the early diagnosis of malignant disease depended on the general practitioner. The diagnostic value of large doses of bismuth, as well as the relief it afforded to cases of gastric and duodenal ulcer, was remarked. He condemned gastrectomy in cases of ulcer, but was in favour of gastro-enterostomy where there were symptoms of obstruction. Finally,

Mr. Couzens remarked on the good prognosis in cases of malignant disease of the lower bowel after incomplete removal. Many interesting personal cases were cited to give point to the lecturer's remarks. Several members took part in the discussion and the meeting finished with a hearty vote of thanks to Mr. Couzens.

NORTH OF ENGLAND BRANCH: BLYTH DIVISION.

A MEETING of the Blyth Division was held on June 1st at the house of Dr. Craig, Dudley. Discussion with regard to the difficulties with unqualified midwives took place. The chief business of the evening was the public medical service scheme. Dr. REVIE (Ashington) outlined the steps already taken there, and after discussion Dr. Fairlie was named convenor for Blyth, Dr. Craig for Cramlington and District, and Dr. Hudson for Bedlington, the object being to form local committees which, when formed, would join with Ashington to form a larger central committee which would correlate all the areas. On the motion of Dr. Hudson a vote of thanks was accorded to Dr. Craig for his hospitality and to Dr. Revie for his advice. A most pleasant and successful evening was spent.

NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.

THE annual summer meeting of the North Northumberland Division was held on June 9th, when a party of forty-four members and their friends made an expedition to the Farne Islands, leaving the harbour at Seahouses in motor boats about mid-day. The Longstone was visited first, and there a picnic lunch was enjoyed, and afterwards the party was shown over the Longstone Lighthouse, which proved of very great interest. Several other islands were also visited in order to see the nests of the sea birds, and on returning to the mainland high tea was partaken of at the hotel at Seahouses. As the weather was fine the whole trip was a great success and was very much enjoyed by all present.

PUNJAB BRANCH.

A MEETING of the Punjab Branch was held in the Patiala Block of the King Edward Medical College on April 20th, when there was a large attendance of the medical profession, with a number of senior students of the College.

Major J. J. HARPER-NELSON, I.M.S., gave a lecture demonstration on the treatment of pulmonary tuberculosis by artificial pneumothorax. After a brief reference to the history of the development of this operation Major Harper-Nelson discussed the indications for its use, its limitations, and dangers. He then proceeded to demonstrate the technique on a patient under treatment. He ended his lecture by exhibiting several patients who had been under treatment for two and a half years down to recently treated cases. Major Harper-Nelson suggested that it was a form of treatment which was too little used in India, and urged that it be employed more often, because of the excellent results which could be obtained even in advanced pulmonary disease. He also advocated its use much earlier than was customary in England, where, owing to good sanatoriums being available, it was possible to delay collapsing the lung until other forms of treatment had been tried and had failed. *In India this was not possible.*

SOUTH-EASTERN OF IRELAND BRANCH.

A MEETING of the South-Eastern of Ireland Branch was held in the Central Hotel, Clonmel, on May 1st. Dr. POWER (Ardfinnan) occupied the chair, and Dr. MYLES acted as honorary secretary in the unavoidable absence of Dr. Grace. Arising out of the correspondence and Dr. Cox's letter, it was proposed by Dr. D. WALSHE, seconded by Dr. QUIRKE, and resolved, that the first meeting under the conditions mentioned by Dr. Cox be held at Kilkenny next October, and that Dr. Hennessy be asked to make arrangements and select a lecturer.

The question of electing a member to collect in the Kilkenny Division for the Medical Benevolent Fund was adjourned to next meeting. At the termination of the meeting the members had tea together.

STAFFORDSHIRE BRANCH.

A MEETING of the Staffordshire Branch was held on May 26th, Mr. W. C. ALLARDICE, the president, being in the chair.

Dr. C. A. STIDSTON read a paper entitled "A medical Rochefoucauld," based on notes by a medical practitioner who, laid aside by a prolonged illness, had meditated on his experiences in active practice and his long illness, during which he had been under the care of a large number of practitioners and had undergone treatment in many kinds of institutions. These notes consisted of aphorisms and humorously sage and often biting sayings regarding the different types of mankind encountered, and touching on patients, doctors' hobbies, specialists, consultants, and general practice. Dr. Stidston's communication was much appreciated, and it was agreed that a literary effort of this kind enlivened the proceedings of the meeting and provided the human touch which was so often lacking in purely scientific communications.

Dr. R. H. H. JOLLY read a paper on death certification, and emphasized the importance of making a distinction in certifying between the fact of death and the cause of death, and outlined the rather complicated, but very complete, system in Switzerland, which separates these two items of certification. He outlined the main points of the legislation dealing with death certification which would come into force in this country in the immediate future. Dr. Jolly analysed very carefully the criteria of a death certificate which would be of the highest value from a statistical point of view, and he quoted numerous examples of good and bad forms of certificate. In the discussion it was shown that the exact degree of secrecy (secrecy being one of the prime advantages claimed as accruing from the new legislation) would depend upon the good faith and discretion of the local registrar. The request frequently made by insurance companies for information regarding the cause of death of particular individuals were also discussed.

Dr. F. M. ROWLAND described a case of cardiospasm simulating malignant disease of the œsophagus, which he had observed for many years. The patient had had a gastrostomy performed several years ago, the view of his condition at that time being that he had a malignant condition of his œsophagus or of the cardiac end of his stomach. Subsequent events showed that it was highly unlikely that this diagnosis was correct, for after the performance of the gastrostomy the patient had rapidly put on weight, and was at present in good health. From time to time the œsophagus functioned, and the patient could then feed himself by the mouth, but, owing to the risk of the achalasia again manifesting itself in marked degree over a prolonged period he had been advised to keep the gastrostomy opening patent.

Dr. S. C. DYKE showed an œsophageal papilloma of very large dimensions. There had been some doubt as to the exact nature of the tumour, but microscopic examinations showed clearly that it was composed of fibro-areolar tissue covered with a stratified epithelium. Another set of specimens showed cerebral haemorrhage as a terminal event in ulcerative endocarditis. A particularly interesting specimen was a glioma growing from the floor of the lateral ventricle and occluding the foramen of Munro. During life the patient had had marked headache and had exhibited very intense papilloedema, but there was an entire absence of localizing signs. The dangers of lumbar puncture in such a case were emphasized. Another specimen was a very large renal adenoma, which, on naked-eye examination, appeared to be a hypernephroma. Microscopic examination, however, demonstrated conclusively its real character. Dr. Dyke stated that, as in most adenomata, the imitation of the "parent" tissue was imperfect and that, while the tubules of the tumour were quite apparent they bore only a slight likeness to fully formed renal tubules. No glomeruli were ever found in these neoplasms. Dr. Dyke also demonstrated a very beautiful and complete specimen of hydatid cyst.

ULSTER BRANCH.

THE annual meeting of the Ulster Branch was held on May 26th *in the King Edward Memorial Hall of the Royal Victoria Hospital*, Belfast. The president, Dr. J. S. MORROW, O.B.E., occupied the chair.

The PRESIDENT showed cases of spinal tumour, spastic paraplegia with shortening of one leg, and aortic incompetence.

Professor MACILWAINE demonstrated some cases of bundle branch block, and Dr. IVAN MCCAW the growth of *Microsporon audouini* at various stages, on Sabouraud's medium.

Dr. FOSTER COATES showed: (1) a case of Addison's disease formerly thought to be pernicious anaemia, but now found to have a marked secondary anaemia count, haemoglobin index of 0.6 and a blood pressure of 60 to 78 mm.; (2) two cases of disseminated sclerosis, one commencing as an acute hemiplegia; (3) a case of gumma of the liver.

Dr. BOYD CAMPBELL presented: (1) a case of double mitral disease with very high eosinophilia (72 per cent.); (2) a case of heart block; (3) two cases of post-encephalitis with improvement after treatment with malaria.

Dr. F. M. ALLEN showed: (1) two patients with congenital pyloric stenosis treated successfully by operations; (2) a case of hydrocephalus; (3) several cases of cardiac lesions in childhood following mild rheumatism.

Dr. J. S. CAMPBELL gave a demonstration of *x*-ray photographs of normal and of diseased coronary arteries, and of normal and of cirrhotic disease of kidney, defined by injection of a bismuth cream.

Dr. J. RANKIN presented: (1) ten cases of rodent ulcer in various sites and in various stages of cure by *x* ray; (2) a case of sarcoma of upper jaw which had improved under *x* rays.

Mr. A. B. MITCHELL showed three cases of pancreatic cyst which he had successfully operated on, with a specimen of about half a pancreas which had sloughed in one of them.

Mr. T. S. KIRK showed *x*-ray photographs of double excision of the hip, of the gall bladder containing calcareous matter, and of calcareous glands; cases of Thiersch skin graft on elbow and of whole skin graft on the heel; and cases of flat-foot treated by cuneiform osteotomy.

Professor FULLERTON reported the successful treatment of megalocolon by stretching of pelvi-rectal sphincter, and showed a patient after splenectomy for acholuric jaundice, two cases of fracture of patella, and cystograms and pyelograms.

Mr. HOWARD STEVENSON presented a patient three years after excision of rectum by Coffee's method, and a second patient two years after by Myles's method.

Mr. P. T. CRYMBLE showed cases of (1) carcinoma of the descending colon treated by colectomy (the distal third of the transverse colon, the descending colon, and the iliac colon had been removed and the transverse colon had been anastomosed to the pelvic colon); (2) *carcinoma of the ascending colon treated* by colectomy (the terminal ileum, caecum, ascending and proximal third of the transverse colon had been removed and the ileum anastomosed to the transverse colon); (3) subtotal gastrectomy for lesser curve ulcers; (4) two-thirds gastrectomy for lesser curve ulcer present for seven years; (5) a patient who had partial gastrectomy for carcinoma five years ago and was still free from recurrence.

Mr. H. P. HALL showed: (1) a case of tendon transplantation

(2) some fractures treated by operation; (3) a case of arteriovenous aneurysm in left calf after gun-shot wound.

Mr. H. P. MALCOLM showed: (1) a case of double complete cervical fistula, with x-ray photographs after injection with bismuth cream; (2) a case of hernia of tibialis anticus, the muscle bulging through the fascia.

WILTSHIRE BRANCH: SALISBURY DIVISION.

THE annual meeting of the Salisbury Division was held at the Salisbury Infirmary on May 27th, when Dr. ARMITAGE was in the chair. The following officers were elected for the ensuing year:

Chairman, Dr. J. J. Armitage (Salisbury). *Vice-Chairman*, Dr. R. C. C. Clay (Forant). *Honorary Secretary and Treasurer*, Dr. F. L. Buttar (Salisbury). *Representative in Representative Body*, Dr. C. E. S. Flemming (Bradford-on-Avon). *Deputy Representative in Representative Body*, Dr. J. E. Gordon (Salisbury).

The "Matters referred to Divisions" were considered, but no resolutions were made in that connexion.

Dr. LUCKHAM proposed a motion suggesting that the Council should ask the Representative Meeting to formulate a middle-class hospital policy. An amendment proposing to await the report of the directors of the St. Edmund's Private Hospitals, Ltd. (a company formed locally to start a middle-class hospital), to the general meeting of the company was proposed by Dr. MARCH. On the vote being taken the original motion was carried by 8 votes to 5.

The CHAIRMAN then, on behalf of the Division, expressed his sympathy with, and good fellowship towards, Dr. A. H. Watson, on the occasion of his having had the misfortune to be a co-defendant in the recent Hume-Spry case. He said that the members had felt that they would like their sympathy to take a practical form, and he had much pleasure in handing Dr. Watson a cheque for £40—subscribed by members of the Division—with the hope that this would help to defray the extraordinary expenses, which must have been heavy. Dr. WATSON expressed his thanks to the chairman and members of the Division.

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

Street Accidents.

By TUNBRIDGE WELLS: That in view of the fact that medical men who are called to street accidents cannot obtain any remuneration afterwards for services rendered, even when, as is frequently the case, a constable is on the scene and in charge of the accident, the Council be asked to take steps to ensure that a fee is guaranteed by the County Council or other authority; further, that the fee payable should be in accordance with the Police Tariff which is already accepted by some authorities, which is paid when a *constable calls* a medical man to an accident.

Observation Wards for Mental Patients.

By TUNBRIDGE WELLS: That there is urgent need for the provision of "Observation Wards," to which patients can be compulsorily sent where conditions, whilst doubtfully justifying certification, are such as to make them a nuisance or a danger to themselves or others.

General Medical Council.

By WARRINGTON: That the motion by Bournemouth (see SUPPLEMENT of May 14th, 1927, p. 202) be amended by the addition, after the word "report," of the words "as to the requisite amendments to the Medical Acts."

The Motion by Bournemouth referred to above reads as follows:

> That the existing representation, power, and procedure of the General Medical Council need careful revision in order that they may comply more precisely with the changed conditions of medical practice, and that this be remitted to the Council for consideration and report.

Workmen's Compensation.

By CHESTERFIELD: That (with reference to paras. 132 and 133 of the Annual Report of Council) the Association is strongly opposed to the practice of some inspectors, not being medical men, acting on behalf of employers' liability insurance companies, of requesting or suggesting the removal of properly applied dressings, when visiting injured workpeople, in order that they may see the injury, and instructs the Council to enter a vigorous protest with representatives of the compensation insurance companies.

Ophthalmic Benefit.

By CHESTERFIELD: That para. 162 (ii) of the Annual Report of Council be amended by the substitution of the words:

> "(ii) That when an insured person has been recommended by a panel doctor for examination by an ophthalmic surgeon and has been, nevertheless, referred by an approved society to an unqualified person"

for the words:

> "(ii) That the option of an approved society to recommend one of its members to see an unqualified person is not contested, but"

EMPLOYMENT OF MARRIED MEDICAL WOMEN.

REPRESENTATIONS BY THE MEDICAL WOMEN'S FEDERATION.

AT the request of the Executive Committee of the Medical Women's Federation we reproduce below the letter recently addressed by it to the members of the Durham County Council with regard to a resolution passed by that council prohibiting the employment of married women in the county service.

Dear Sir,

The Council of the Medical Women's Federation has learned with the deepest regret that the Durham County Council has decided to debar from employment on its staff all married women, medical and otherwise, whose husbands are in the receipt of an adequate income. The Medical Women's Federation has always upheld the principle that considerations affecting efficiency of work should alone govern the appointment or dismissal of medical officers, and believe that this principle is in accordance with the true interests of the community.

They would venture to point out that without the enactment of special restrictions it is always open to an appointing authority to select unmarried rather than married candidates where they consider marriage is likely to act as a handicap to their work. What the new regulation will do is to keep out of sight all possible married candidates, including, it may be, women of exceptional ability and experience, or in regard to whom the handicap of marriage may be comparatively slight—that is, married women without children, or where children have reached an age to make little demand on the mother's time. The consideration of special cases, where the compensatory advantages may largely overbalance the possible handicap of marriage, is debarred. The rule also ignores completely the undoubted fact that in medicine, and other professions also, there are branches where the personal experience gained by marriage and motherhood adds to the value of the worker, as, for instance, in baby welfare work. For these reasons, we feel strongly that this regulation does not tend to the maintenance of the maximum efficiency of work or to the appointment in all cases of the best qualified candidates.

We quite appreciate the point of view which wishes to distribute the employment available amongst as many households as possible, where compatible with efficiency, but if economic reasons of this kind are to be taken into consideration in making appointments the ought to be made to apply to men also who possess, for instance, private means or a wealthy wife. One point that we think is often overlooked is that married medical women—at any rate those who remain in employment after marriage—are obliged to employ at least one woman to look after their households, and if they have families, often two or more people, who would not be employed if the mother were at home. Married women—and we think this especially true of married medical women—who remain in employment after marriage usually do so, not because of the enhanced income, but because they like their work and are peculiarly efficient at it, and they distribute often the whole of their earnings in wages and salaries to others.

We trust that the Council will favourably consider this protest. It is sent because we feel strongly that prohibitive regulations of this kind are grossly unfair to women who have given years of work and devotion to their profession, and also to the public, who are often deprived thereby of the services of tried and skilled workers.

Yours faithfully,

CHRISTINE M. MURRELL, *President*,
FRANCES IVENS, *Past-President*.
CLARA STEWART,
ELLEN B. ORR, *Vice-Presidents*.
JANE H. WALKER, *Honorary Treasurer*.
F. MAY DICKINSON BERRY, *Honorary Secretary*.

Medical Women's Federation,
9, Clifford Street, Bond Street, W.1.
June 1st.

THE DENTAL BOARD.

A SESSION of the Dental Board was held on May 10th and 12th, SIR FRANCIS DYKE ACLAND presiding. The CHAIRMAN, in his address, touched on the question of dental clinics in connexion with advertising and canvassing. He pointed out that a firm or organization with a genuine desire to benefit its staff or members might provide a dentist with a consulting room or surgery and might or might not pay him a fee. Attendance upon the staff would give him an introduction to practice with the families and friends of those who came as patients, and the firm might advise members of its staff who needed dental attention to go to the clinic and might give the name of the dentist in attendance. This was not at all popular in the profession. It was for the fortunate individual a short cut to a practice, which was regarded as unfair to others who had no chance of being provided with patients ready made. But the question for the Board to decide did not turn on popularity; it was whether the dentist had followed a practice contrary to the public interest and discreditable to the profession of dentistry. The question of whether this was indirect advertising could only rightly be answered on a particular case. A similar point arose in connexion with a dentist appointed by an approved society as its dentist under the Insurance Act, the approved society saying to a member who was entitled to treatment under its scheme, "This is our dentist; you must go to him if you require treatment." Mr. Acland said that if the dentist knew that that practice was being adopted in connexion with him and permitted it, he was of opinion that the dentist was doing an action discreditable to the profession, and would therefore be liable to disciplinary action by the Board.

Educational Grants.—The Board decided to offer a grant of £5,000 towards the cost of erecting a new building for the dental school of the Incorporated Glasgow Dental Hospital and School, and a further grant of £1,000 towards the cost of equipment. It also decided to make a grant of £1,500 towards the cost of movable equipment for the new dental school of the University of Leeds (towards the cost of which it had previously voted £5,000), and a grant not exceeding £300 for the equipment of a dental museum and demonstration room at Queen's University, Belfast. The grants in each case were subject to the usual conditions.

It was reported that the number of students who have been assisted by grants and loans from the Board is now 387, of whom 205 have qualified and 163 have not yet reached the end of the period for which assistance was given. A change in the present system of awarding bursaries has been considered, but not decided. It is felt that the careful interviewing of the applicant cannot be wholly replaced by any form of written examination. The number of candidates for bursaries at the last half-yearly selection was 26, and awards were made in 22 of the cases.

Disciplinary Action.—Most of the disciplinary cases before the Board were concerned with professional announcements which overstepped the line, and on promise of amendment the Board decided not to proceed to judgement. The Board has reissued its Warning Notice, which includes the several matters of unregistered assistants and covering, contravention of the Dangerous Drugs Acts and Regulations, advertising and canvassing, and the use of misleading titles and descriptions.

National Insurance.

LONDON PANEL COMMITTEE.

AT the meeting of the London Panel Committee on May 24th, Dr. H. J. CARDALE presiding, the following were appointed to fill vacancies on the committee for the constituencies named: Dr. R. P. A. Starkie (Westminster), Dr. H. I. Davies (Paddington), and Dr. A. J. Russell (Deptford).

Farming out of Practices.—The committee considered again a report from the Joint Consultative Committee with regard to the manner in which an insurance practitioner had discharged his duties under the terms of service, in particular to the obligation of the practitioner to provide personal service. It appears that a different construction is placed by the Ministry of Health upon the relevant clauses of the terms of service from that which the Insurance Committee had hitherto understood. That committee is of opinion that the extension of "farming out" as evidenced by the principal practitioner allowing an assistant to attend to the majority or a large proportion of his patients is reprehensible. The Joint Consultative Committee proposed to send a deputation to confer with the Ministry on the question, and the Panel Committee agreed to add three representatives to the deputation—namely, Drs. Cardale, Chase, and Gregg. A somewhat lengthy discussion took place as to the arguments to be put forward by the deputation, but in summing-up the discussion Dr. Cardale remarked that he had heard nothing which fundamentally altered the general opinion expressed at the previous meeting of the Panel Committee, that, if the Ministry was approached, some way might be found under existing regulations whereby the farming out of practices might be discouraged.

Pathological Laboratory Services.—Discussion arose on the memorandum (M.27) circulated by the Insurance Acts Committee to all Local Medical and Panel Committees on the subject of pathological laboratory services. The view taken was that the Local Medical and Panel Committees should withold any decision on schemes for the provision of pathological services which might prejudice any future negotiations of the Insurance Acts Committee with the Ministry of Health on the general question of a national laboratory service. Dr. Stebbing, however, expressed the view that it would be wise to encourage the trial of all kinds of experiment and the expression of opinion of committees all over the country as to whether experiments were successful or not. The memorandum appeared to suggest that there should not be any such expression of opinion. On this the chairman pointed out that there was no endeavour to stifle discussion as to proper schemes for providing pathological work. There was merely a warning to committees to watch very carefully any scheme put before them by an Insurance Committee for providing laboratory services. It was essential that there should be some knowledge of the conditions under which pathologists worked. Dr. Stebbing replied that undesirable things were going on, and he contended that if the Insurance Acts Committee would condemn them in round terms and let Panel Committees know what was being condemned, they would probably receive whole-hearted support. Dr. H. B. Morgan disagreed with Dr. Stebbing and maintained that all that was asked was that Panel Committees should withold any definite decision on a matter of extreme importance to the profession. Conditions of pathological investigation varied so enormously that no decision could be given which would be uniform throughout the country.

HASTINGS PANEL COMMITTEE.

AT a meeting of the Hastings Local Medical and Panel Committee, held on May 16th, with Dr. HOWE in the chair, the report of the Distribution Committee was read. The proportion of the fund this year is 0.158, which is higher than last year, owing probably to the large number of temporary residents treated in the area. Last year 2,755 of these were treated. A letter from the Ministry of Health explained that all due consideration was allowed in apportioning the fund to the number of temporary residents in the area. As the financial condition of the fund formed by the voluntary levy was in a satisfactory condition, it was resolved to contribute £50 to the National Insurance Defence Fund. The committee has already contributed 46 per cent. of its quota towards the £250,000, and the hope was expressed that all Local Medical and Panel Committees would contribute their full amount so that the future might be secure.

Among other business transacted it was decided not to appoint a representative to attend when the regional medical officer investigated cases of alleged excessive prescribing. It was thought that the matter should be threshed out privately between the practitioner and the regional medical officer.

WARWICKSHIRE PANEL COMMITTEE.

AT the meeting of the Warwickshire Local Medical and Panel Committee, held at Leamington on May 26th, Dr. HERBERT MALINS presiding, consideration at some length was given to the communications of the British Medical Association, the Lancashire Insurance Committee, and the Cheshire Joint Committee regarding the provision of pathological laboratory services. Dr. HAWLEY, the chairman of the Coventry Panel Committee, who was present, stated that his committee's attention had been called to the steadily increasing use of autogenous vaccines, and the problem of moderating the use of these expensive preparations without unduly restricting the individual practitioner's freedom of action was a difficult one. The feeling was generally expressed that the time was not opportune for the Panel Committee to take any part in a scheme which was likely to impose any extra strain on the Drug Fund. In this connexion the current negotiations of the Ministry of Health with the pharmacists were reviewed, and allusion was made to the Ministry's offer to hand over the whole of the Drug Fund to the chemists, accompanied with powers safeguarding them against the possibility of discounting through undue extravagance on the part of prescribing doctors. Apprehension was expressed lest panic action would emerge at the expense of the insurance practitioners' freedom of action and the insured patients' interests. It was agreed to await further information from the Insurance Acts Committee.

Many examples were given of the refusal of the large industrial approved societies to give effect to practitioners' recommendations that patients requiring ophthalmic treatment should be referred to a competent surgeon. The meeting directed that examples of some of the more serious dangers involved be collected and sent to the Insurance Acts Committee and the Ministry of Health.

It was reported that every practitioner in the county had been circularized by the chairman and secretary with a specimen set of forms relating to the medical statistics required by the Insurance Acts Committee.

On consideration of the British Medical Association's circular regarding the future of Insurance and Local Medical Committees it was resolved to await the introduction of amending legislation, the Committee having already circularized to all Panel Committees their views that all local administrative health services should be amalgamated under one authority analogous to the education committee.

LONDON INSURANCE COMMITTEE.

At the meeting of the London Insurance Committee on May 26th a report was given by the members of a recent deputation to the Ministry of Health to ascertain the practice which the committee should follow in making representations to the Ministry concerning practitioners or chemists held to be guilty of breach of the terms of service. The discussion at the Ministry had turned mainly on the case of chemists, and it appeared that the Ministry was not in sympathy with what had seemed to be the practice of the committee not to make representations if it was the first time that the dispensing of a particular chemist had been brought under review. The Ministry also stated that the purpose of referring back cases to the committee for further observation was not to elicit the opinion of the committee as to whether money should be withheld, but to learn whether there were any local conditions which could be urged in extenuation of the error committed. So far as medical cases were concerned it was the general opinion that each case must be considered on its merits; it was impossible to lay down any standard, and the Medical Service Subcommittee, after arriving at a decision that a breach of the terms of service had been committed, should consider whether the circumstances of the case called for representations being made for the withholding of money.

A case in point came forward at the same meeting. In February the committee had held that a practitioner had committed a breach of the terms of service and decided to caution him. It was reported that the case had been considered by the Minister, who, having regard to the action taken in other areas in similar cases, was of opinion that the facts seemed to warrant the withholding of money, but the Minister wished to hear any observations the committee might make before taking such action. The Medical Service Subcommittee thereupon reconsidered the matter, but, believing that the practitioner acted under a misapprehension and not deliberately, decided to adhere to its previous decision that the case was met by a caution.

Drugs and Appliances Disallowed.—It was reported to the committee that during the first quarter of 1927 the following articles which had been prescribed by practitioners were disallowed, on the ground that they did not come in the category of appliances laid down under the regulations: thermogene wool, eye-shades, finger-stalls, syringes, elastic knee-caps, trusses, elastic stockings, atomizer, inhaler and nasal douche, blackhead extractor, clinical thermometer, feeding-tube, glass funnel, instep supports, medicine glass, and throat brush.

Correspondence.

Midwives Acts.

SIR,—In reference to my letter which appeared in your issue of May 28th (SUPPLEMENT, p. 219) under the above heading, the county medical officer to the Devon County Council informs me that when the Act of 1926 came into force every medical practitioner in the county was duly notified of the provisions referred to, in accordance with the circular of the Ministry of Health relative thereto.

Through the lapse of time, however, the position has arisen that some medical practitioners in the county of Devon, and doubtless in other counties, have not received any notification, and, bearing in mind that such documents are easily forgotten, it would seem that a reasonable procedure to obviate the difficulty would be to print a notice on the forms supplied for making claims in respect of midwifery fees, indicating clearly that they must be rendered within two months of the time when the services are rendered.—I am, etc.,

London, W.C.2, June 9th. HUGH WOODS.

Naval and Military Appointments.

ROYAL NAVAL MEDICAL SERVICE.

Surgeon Captain A. J. Hewitt to be Surgeon Rear-Admiral.

Surgeon Commander R. H. Atkins is placed on the retired list with the rank of Surgeon Captain.

Surgeon Commanders T. L. J. Barry to the *Emperor of India*; B. S. Robson to the *Vivid* for R.M. Infirmary, Plymouth (amended appointment); C. J. Aveling and B. P. Pick to the *President*, additional for Medical Department, Admiralty, temporary.

Surgeon Lieutenant V. F. Walsh to the *Vivid* for Devonport Dockyard.

To be Surgeon Lieutenants: C. T. Hyatt, J. L. Malone, T. F. Barlow.

ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant R. Hall transferred to the Royal Navy as Surgeon Lieutenant.

Surgeon Lieutenant S. W. Davidson to the *Victory* for R.N. Hospital, Haslar, for sixteen days' training.

ROYAL ARMY MEDICAL CORPS.

Colonel H. Herrick, C.M.G., D.S.O., late R.A.M.C., retires on retired pay.

Lieut.-Colonel and Brevet Colonel F. S. Irvine, C.M.G., D.S.O., from R.A.M.C., to be Colonel, vice Colonel H. Herrick, C.M.G., D.S.O., to retired pay.

Major F. J. Garland, D.S.O., to be Lieutenant-Colonel, vice Lieut.-Colonel and Brevet Colonel F. S. Irvine, C.M.G., D.S.O., promoted.

Major A. E. G. Fraser, half pay list, late R.A.M.C., on completion of a period of five years on the half pay list, is placed on retired pay on account of ill health, May 16th, 1927 (substituted for notification in the *London Gazette*, June 3rd, 1927).

Major J. Vallance, M.C., R.A.M.C., Regular Army Reserve of Officers, to be Captain whilst re-employed under Article 567 (B), Royal Warrant for Pay and Promotion, 1926, and relinquishes the rank of Major.

Captains to be Majors: L. B. Clarke and W. McE. Snodgrass, M.C.

Captain E. S. Cuthbert to be Major (prov.) with precedence next below T. Young.

Captain A. Mearns to be Major (prov.) with precedence next below F. McKibbin.

To be temporary Lieutenants: I. MacW. Bourke, B. H. H. Tripp, G. de N. U. Somers, J. B. Carrigan, F. R. How, late Captain T.A. Reserve, 12th London Regiment.

ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader A. J. O. Wigmore to No. 1 Flying Training School, Netheravon.

Flight Lieutenants F. L. White to No. 14 Squadron, Palestine; A. Harvey to Palestine General Hospital.

Flying Officers E. P. Carroll and G. W. McAleer to the Research Laboratory and Medical Officers' School of Instruction on appointment to short-service commissions.

INDIAN MEDICAL SERVICE.

Colonel Godfrey Tate, V.H.S., to be Major-General, vice Major-General R. Heard, C.I.E., K.H.S.

Lieutenant-Colonels to be Colonels: R. F. Baird, vice Colonel G. Tate, V.H.S., and G. Hutcheson, vice Colonel C. H. Bensley, C.I.E., K.H.P.

Lieut.-Colonels J. G. P. Murray and R. M. Carter, C.B., have retired from the service.

Lieut.-Colonel J. Anderson, an Agency Surgeon, is granted leave on average pay for six months under the Fundamental Rules.

Captains to be Majors: J. D. L. Yule and M. L. Dhawan.

Lieutenant J. E. Gray to be Captain.

MILITIA.

ROYAL ARMY MEDICAL CORPS.

Major H. K. Ward, M.C., relinquishes his commission and retains the rank of Major.

TERRITORIAL ARMY.

ROYAL ARMY MEDICAL CORPS.

To be Lieutenants: H. MacG. Coope, A. T. Ashcroft, D. S. Middleton, Lieutenant T. Wallace, late R.A.M.C. (with precedence as from October 4th, 1926).

TERRITORIAL ARMY RESERVE OF OFFICERS.

ROYAL ARMY MEDICAL CORPS.

Captain J. V. Holmes, from the active list, to be Major.

Captain J. K. Davies, from the active list, to be Captain.

COLONIAL MEDICAL SERVICES.

Dr. H. T. Palmer promoted Assistant Director of Medical and Sanitary Service, Nigeria. Dr. W. W. Besson appointed Assistant Government Medical Officer, British Guiana. Drs. C. F. McConn and W. S. Ormiston appointed Medical Officers, Nigeria. Dr. T. A. Austin confirmed in his appointment as Medical Officer, Zanzibar.

VACANCIES.

BARRY URBAN DISTRICT COUNCIL.—House-Surgeon (male) at the Accident and Surgical Hospital. Salary at the rate of £200 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.11.—Resident Medical Officer (male). Salary £200 per annum.

BRIGHTON: ROYAL SUSSEX COUNTY HOSPITAL.—(1) House-Surgeon. (2) House-Physician. (Males, unmarried.) Salary £150 per annum each.

BRISTOL GENERAL HOSPITAL.—Honorary Assistant Surgeon to the Ear, Nose, and Throat Department.

BURY INFIRMARY.—Third House-Surgeon (male). Salary at the rate of £150 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—Casualty Officer and Resident Anaesthetist (male). Salary at the rate of £130 per annum.

CANCER HOSPITAL, Fulham Road, S.W.3.—House-Surgeon. Salary at the rate of £100 per annum.

CASSEL HOSPITAL FOR FUNCTIONAL NERVOUS DISORDERS, Penshurst, Kent.—Resident Medical Officer (male, unmarried). Salary £350 per annum, rising.

CHELTENHAM AND GENERAL EYE HOSPITALS.—House-Surgeon (male, unmarried) at the General Hospital. Salary £200 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—Assistant Tuberculosis Officer. Salary at the rate of £600 per annum.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Resident Medical Officer (male). Salary at the rate of £200 per annum.

FINSBURY BOROUGH COUNCIL.—Assistant Medical Officer of Health. Salary £700 per annum.

GOLDEN SQUARE THROAT, NOSE, AND EAR HOSPITAL.—Honorary Anaesthetist.

HAMPSHIRE COUNTY COUNCIL.—Medical Adviser under the Mental Deficiency Acts and Resident Medical Superintendent of Institution for the Mentally Defective. Salary £700 per annum.

IPSWICH: EAST SUFFOLK AND IPSWICH HOSPITAL.—House-Surgeon and Casualty Officer. Salaries £100 per annum.

LEEDS PUBLIC DISPENSARY.—Junior Resident Medical Officer. Salary £150 per annum.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.1.—(1) House-Physician. (2) Casualty Officer. Salary at the rate of £100 and £120 per annum respectively.

LONDON UNIVERSITY.—External Examinerships: (1) Anatomy and Physiology for the Second Examination; (2) Forensic Medicine and Hygiene (two), Pathology and Surgery for Final and Higher Examinations.

MAIDSTONE: KENT COUNTY OPHTHALMIC AND AURAL HOSPITAL.—Ophthalmic House-Surgeon (male, unmarried). Salary at the rate of £200 per annum.

MANCHESTER: ANCOATS HOSPITAL.—Resident Medical Officer. Salary at the rate of £150 per annum.

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASES OF THE THROAT AND CHEST.—Assistant Medical Officer for the Crossley Sanatorium. Salary £200 per annum.

MERSEYSIDE BOROUGHS HEALTH EDUCATION COMMITTEE.—Lecturer Organizer. Salary £400 for six months.

METROPOLITAN ASYLUMS BOARD.—Junior Assistant Medical Officer at the Downs Hospital for Children, Sutton. Salary £500 per annum.

MIDDLESEX HOSPITAL MEDICAL SCHOOL, W.1.—Second Demonstrator for the Physiology Department. Salary to commence £350 per annum.

MIDDLESEX HOSPITAL MEDICAL SCHOOL, BLAND-SUTTON INSTITUTE OF PATHOLOGY.—Assistant for Cancer Research. Salary according to experience, but not less than £350 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—(1) Casualty Officer. (2) House-Surgeon. (Males, unmarried.) Salary £150 and £125 per annum respectively.

MINISTRY OF HEALTH.—Medical Officers of the Staff of the Ministry (males). Salary £600 per annum, rising to £1,100.

NORTHAMPTON COUNTY BOROUGH EDUCATION COMMITTEE.—Assistant School Dentist. Salary £450 per annum.

NOTTINGHAM CHILDREN'S HOSPITAL.—Resident House-Surgeon (woman). Salary at the rate of £150 per annum.

READING: ROYAL BERKSHIRE HOSPITAL.—(1) House-Physician. (2) Second House-Surgeon. (3) Third House-Surgeon. Salary at the rate of £150 per annum each.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, Waterloo Road, S.E.1.—(1) House-Physician (male). (2) Assistant Radiologist (part-time). Salary at the rate of £100 and £50 per annum respectively.

ST. HELENS COUNTY BOROUGH.—Deputy Medical Officer of Health (male). Salary £700 per annum, rising to £750.

ST. MARK'S HOSPITAL FOR CANCER, FISTULA, ETC., City Road, E.C.1.—Clinical Assistants in the Out-patients' Department.

ST. MARYLEBONE GENERAL DISPENSARY, 30, Marylebone Lane, W.1.—Honorary Surgeon to the Ear, Nose, and Throat Department.

SALFORD ROYAL HOSPITAL.—(1) House-Physician. (2) House-Surgeon attached to the Genito-urinary Department. (3) House-Surgeon to the Gynæcological, Aural, and Skin Departments. (4) Casualty House-Surgeon. Salary at the rate of £125 per annum each.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Two Assistant House-Surgeons. Salary at the rate of £100 per annum.

SOUTH LONDON HOSPITAL FOR WOMEN, Clapham Common, S.W.4.—Assistant Physician (female).

SOUTHAMPTON: ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL.—House-Physician. Salary £150 per annum.

STIRLING DISTRICT MENTAL HOSPITAL, Larbert.—Third Assistant Medical Officer (lady) to act as Pathologist. Salary £250 per annum.

STORTHES HALL MENTAL HOSPITAL, Kirkburton, near Huddersfield.—Junior Grade Assistant Medical Officer (unmarried). Salary £400 per annum, rising to £500.

WARWICKSHIRE COUNTY COUNCIL.—Assistant County Medical Officer of Health. Salary £600 per annum.

WEST BROMWICH UNION.—Resident House-Physician at Hallam Hospital. Salary £250 per annum.

WEST HARTLEPOOL COUNTY BOROUGH.—Assistant Medical Officer of Health. Salary £600 per annum.

WORCESTERSHIRE COUNTY COUNCIL.—Assistant County Medical Officer (part-time). Salary £300 per annum.

WORKSOP: VICTORIA HOSPITAL.—House-Surgeon (male, unmarried). Salary at the rate of £170 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Great Haseley (Oxfordshire), Filey (York, East Riding). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.

General Meeting of Fellows.—Tues., 5.30 p.m., Ballot for Fellowship.

Section of Urology.—Thurs., 8.30 p.m., Demonstration, Mr. Frank Kidd: Specimens illustrating the Range of the Operation of Nephro-ureterectomy.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.1.—Tues., 5 p.m., Croonian Lecture by Sir F. Gowland Hopkins, F.R.S.: The Task of Biochemistry.

MEDICO-LEGAL SOCIETY, 11, Chandos Street, W.1.—Thurs., 8.30 p.m., Annual General Meeting, followed by ordinary meeting. Lord Riddell: The Law and Ethics of Medical Confidences.

RESEARCH DEFENCE SOCIETY, 11, Chandos Street, W.1.—Tues., 3 p.m., Annual General Meeting. Stephen Paget Memorial Lecture by Professor Julian S. Huxley: Research and the Community.

ST. JOHN'S HOSPITAL DERMATOLOGICAL SOCIETY (incorporating the London Dermatological Society).—Wed., 5 p.m., Annual Oration by Dr. H. Hæxthausen (Copenhagen): Streptococcic Pityriasis; followed by the annual general meeting.

POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Demonstrations (free to members of the medical profession): Prince of Wales's Hospital, Mon., 2.30 p.m., Medical; Royal Free Hospital, Wed., 4 p.m., Surgical Treatment of Goitre; Royal Eye Hospital, Fri., 3 p.m., Ophthalmic Cases. *Blackfriars Skin Hospital*, Blackfriars, S.E.: Course of Instruction in the O[illegible]fternoon from 2.30; special demonstration [illegible] *Clinic*, Cosway Street, N.W.: Lectures [illegible]ases of Children, afternoons and some [illegible] to fees, etc., from the Fellowship of Med[illegible]. 4 p.m., Vaccine Therapy.

HOSPITAL FOR SICK CHILDREN, Great [illegible].

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Napkin-area Eruptions in Infants. Thurs., 5 p.m., Bullous Eruptions.

NATIONAL HOSPITAL, Queen Square, W.C.1.—Mon., Tues., Thurs., and Fri., 2 p.m., Out-patient Clinics. Mon., 12 noon, Pathology of the Nervous System; 3.30 p.m., Diagnosis of Cerebral Tumours. Tues., 3.30 p.m., Cranio-cerebral Topography. Thurs., 3.30 p.m., Hemiplegia. Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m., Demonstration of [illegible].

NORTH-EAST[illegible] COLLEGE, Prince of Wales's General Hospital, [illegible].—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynæcological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical Skin and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations; 4.30 p.m., Special Demonstration on Selected Cases of Nerve Diseases.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 3.15 p.m., Eye Disease as a Complication of Sepsis Elsewhere.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION.—Wed., 3 p.m., Visit to Queen Mary's Hospital, Carshalton.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—At Jessop Hospital: Tues., 3.30 p.m., Treatment of Pelvic Inflammation. At Royal Infirmary: Fri., 3.30 p.m., Clinical Cases.

North Wales Branch: Annual Meeting, Penmaenmawr. Address by Medical Secretary.

BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.

BIRTHS.

ALLEN.—On June 8th, at Fulwood, Shotley Bridge, Grace, the wife of Dr. R. Barclay Allen, of a son.

MYLES.—On Sunday, June 12th, to Dr. and Mrs. David Myles, Forfar, a son.

SNELLING.—On June 14th, at 130, High Town Road, Luton, to Ettie, wife of Trevor R. Snelling, M.R.C.S., L.R.C.P., a son.

MARRIAGES.

BATEMAN—DIXON.—On June 7th, at Pelton Church, co. Durham, Charles Bateman, M.D., Ch.B.Edin., to Mary Brenda, daughter of Mr. and Mrs. Dixon, Pelton Fell, co. Durham.

CLARKE—HERON.—John H. K. Clarke, M.B., Ch.B., M.R.C.S., L.R.C.P., to Margaret Cameron McVean Heron, on June 8th.

SHANNON—COX.—At St. Joseph's R.C. Church, Rugeley, Staffs, on June 11th, by Rev. Fr. W. Memnagh, Peter Shannon, M.B., Ch.B.Glas., son of the late Mr. and Mrs. Peter Shannon, Rutherglen, to Margaret, second daughter of Mr. and Mrs. Michael Cox, Dromod, co. Leitrim.

STEEL—WALLACE.—On June 6th, 1927, at Corstorphine Parish Church, Edinburgh, John Parker Steel, M.D.Edin., Saint Luke's Hospital, Middlesbrough, to Agnes Hudson, younger daughter of Mrs. Wallace and of the late Mr. John Wallace, Corstorphine, Edinburgh.

DEATH.

HUTCHINSON.—On May 29th, 1927, suddenly, at Irwell Street, Widnes, Creighton Hutchinson, M.D., C.M.Glas., L.R.C.S.Edin., in his 69th year.

Printed and published by the British Medical Association, at their Office, Tavistock Square, in the Parish of St. Pancras, in the County of London.

BIRTHDAY HONOURS.

193. The Council has pleasure in announcing that honours have been conferred upon the following members, to whom the congratulations of the Association have been sent:—

K.C.V.O.

Edward Farquhar Buzzard.

K.B.E.

Charles Percy Barlee Clubbe.

Knighthood.

Louis Edward Barnett, C.M.G.
Charles James Martin, C.M.G., F.R.S.

OBITUARY.

194. The following is a supplementary list of Members whose deaths the Association deplores:—

Dr. Herbert Edward Crawley	Former Member of the Executive Committee of the Portsmouth Division.
Dr. Thomas Henry Fiaschi	Former Member of the New South Wales Branch Council.
Dr. Wm. Anderson Fuller	Former President of the North Lancashire and South Westmorland Branch, at one time Chairman of the Kendal Division.
Dr. Herbert Jennings Gibbs	Former Secretary of the Malaya Branch.
Mr. Bryden Glendining	Secretary of Section of Pathology, 1911.
Dr. Richard Griffith	Former Member of the Executive Committee of the South Carnarvon and Merioneth Division.
Dr. Wm. Hammond Hodgson	Vice-Chairman, and a former Chairman, of the Blackpool Division.
Dr. Leigh Hunt	Former President of the Perth Branch.
Dr. Leighton Hutchinson	Former Vice-Chairman of the Warrington Division.
Dr. John McKie, D.S.O.	Former Member of the Executive Committee of the Glasgow Eastern Division.
Dr. Samuel Edgar Martin, Sen.	Former Chairman of the Portadown Division; at one time Vice-President of the Ulster Branch.
Dr. Alfred Hugh Minton	Former Member of the Executive Committee of the Woolwich Division.
Dr. Samuel Colley Salter	Deputy Representative of the Manchester Division, and a Honorary Branch Auditor.
Dr. Wm. Shand	Former Member of the North of England Branch Council, and of the Executive Committee of the Cleveland Division.
Dr. James Burnet Smith	Former Chairman of the East Hertfordshire Division.

Prof. Ernest Henry Starling, C.M.G.	Former Member of the Research and Laboratory Workers' Sub-Committee of the Science Committee; Secretary, 1895 and President, 1908, of Section of Physiology.
Dr. John Wherry Willson ...	Member of the Executive Committee of the Harrogate Division; a former Chairman and Secretary of the Bradford Division.

Dr. Mangalore Laxumana Bangara, Dr. John Patrick Benson, Major Sorab Dinshaw Billimoria, I.M.S., Dr. George Gordon Blair, D.C.M., Dr. Felix Anthony de Boissiere, Major Charles Hildred Brendribb, I.M.S. ret., Dr. Wm. Angus Campbell, Dr. Wm. Noel Child, Dr. John Cornelius Collins, Dr. Doris Louise Delittle, Dr. Florince O. Donohue, Dr. Hope Murray Gillespie, M.C., Dr. Robert Wilson Taylor Haddow, Lt.-Col. Edward Temple Harris, D.S.O., Dr. Henry Lewis Harris, Dr. John Thomas Haworth, Dr. Moses Henry, Dr. Evan Lewis Hickey, Dr. Charles Joseph Hughes, Dr. John Owen Jones, Lt.-Col. Wm. Hamilton Kenrick, I.M.S. ret., Lt.-Col. Ernest Blake Knox, R.A.M.C. ret., Captain Gautam Kumar, I.M.S., Dr. Jenkyn Lewis, Dr. Donald MacDonald, Dr. Walter James McFeat, Dr. Rae McRae, Dr. Guy Witton Miller, Dr. Robert Bernard Pearson Monson, Mr. Andrew Stanford Morton, Dr. Wm. Guy Pinching, Dr. James Pinder, Dr. Oswald James Reid, Dr. John Robinson, Dr. Leslie John Scott, Dr. Henry Beveridge Smith, Dr. Henry Riddell Stanley, Dr. James W. Stewart, Dr. Mark Johnston Symons, Dr. Waren Tay, Prof. James Edwin Thompson, Dr. Arthur Charles Robert Todd, Dr. Narainasamy Veerasamy, Dr. Allan Whitfield, Dr. John Henry Peter Wijiesinghe, Dr. Wm. Wilfred Williams, Dr. Herbert Pattison Wiltshire, Dr. Wm. Stead Woodburn.

ASSOCIATION COLLECTION OF AUTOGRAPHS.

195. The Council (at the suggestion of Mr. G. Grey Turner, of Newcastle-on-Tyne, who has presented an autograph letter of Sir Charles Hastings) has decided to commence an Association collection of autograph letters to include the autographs of (a) persons who have held high official position in the Association, (b) celebrated medical men and women, and (c) lay persons in some way connected with the medical profession or medical affairs. Mr. E. Muirhead Little, F.R.C.S., has kindly volunteered to take charge of the collection, which will be kept in the Association House where it will be available for inspection by those interested.

GIFT FROM THE SOUTH AFRICAN FEDERAL COUNCIL.

196. The Council has to announce with great pleasure the arrival from South Africa of two Kudu heads, together with a plate inscribed as follows:—

S.A. TROPHIES
KUDU
from SOUTH-WEST AFRICA
PRESENTED TO
THE
BRITISH MEDICAL ASSOCIATION
by
THE MEDICAL ASSOCIATION OF SOUTH AFRICA
(BRITISH MEDICAL ASSOCIATION)
1927.

as a gift to the Association from the South African Federal Council for the Association House. The heads have been placed in the Members' Lounge and the cordial thanks of the Council for this generous and welcome gift have been transmitted to the Federal Council.

B.M.A. HOUSE AND SITE OF TAVISTOCK HOUSE.

197. Members will be interested to know that the wall of the Garden on the South Side of the B.M.A. House marks the site of the foundation of the original Tavistock House, where Charles Dickens lived from 1851-1860, and some of the bricks used in that wall were actually part of the foundation. In order to mark permanently the site the following inscription is being placed on the wall:—

"This is the site and these bricks were part
of the foundation of the house of
CHARLES DICKENS
1851-1860.
BRITISH MEDICAL ASSOCIATION.
1927."

MEMENTO OF THE LATE DR. EDWIN RAYNER.

198. The Council is pleased to report that Miss Rayner, J.P., of Weybridge, has presented to the Association a clock, with an inscription commemorating the long services of her father, Dr. Edwin Rayner, of Stockport, to the Association. Dr. Rayner was a most devoted member of the Association for many years and served as its Treasurer from 1907 to 1916. The clock has been placed in the Chairman of Council's room.

RESIGNATION OF SOLICITOR OF THE ASSOCIATION.

199. It is with regret that the Council has to report that Mr. W. E. Hempson, Solicitor to the Association, finds that the time has come when he feels that he will not be able to seek re-election as Solicitor to the Association. Mr. Hempson has acted in the capacity of legal adviser to the Association for the past twenty-seven years, and, in conveying his decision to the Council, states that throughout his professional life none of his clients had been held in the esteem which he bore towards the Association, and that its work had at all times been a pride and a pleasure to him calling for the best that he could give. The Council is sure that members will join with it in gratitude for the long, faithful and valuable services which Mr. Hempson has rendered to the Association during his long period of office, services by no means confined to his technical duties as the Solicitor of the Association.

The Council therefore recommends:—

Recommendation: That Mr. W. E. Hempson, in recognition of his faithful and devoted service as Solicitor to the Association for twenty-seven years, be elected an Honorary Member of the Association, having the privileges of receiving the British Medical Journal and of attending the Annual Meetings of the Association.

PINEL AND VULPIAN CENTENARY, PARIS, 1927.

200. The Association at the invitation of the French Medico-Psychological Society, appointed Dr. C. Hubert Bond to act as its representative at the celebration in Paris in May, 1927, of the Centenary of the death of Pinel and of the birth of Vulpian. Dr. Bond presented an address on behalf of the Association.

Building.

201. The Council in October, 1926, appointed a special Building Committee to consider all questions of rebuilding in connection with the Association premises, the Committee consisting of Sir Robert Bolam, Dr. H. B. Brackenbury, Mr. N. Bishop Harman, Dr. C. O. Hawthorne, and Dr. R. Wallace Henry, with the chief officials of the Association acting in an advisory capacity.

202. Under the terms of the lease with the Bedford Estate, Nos. 18, 19, and 19A, Tavistock Square have come into the possession of the Association and having been reconditioned are temporarily occupied pending rebuilding. Nos. 1 and 2, Upper Woburn Place will come into the hands of the Association in September, 1927, and the Association is bound under its lease to rebuild on these sites within a period of 10 years, expiring September, 1934.

203. The extensions are to be erected in accordance with plans and specifications to be approved by the Bedford Estate and to follow substantially the type of the existing building.

204. The Council gave consideration to the increased cost of the occupation and maintenance of the Association's house when these extensions were completed, recognising that some readjustment of space either in the existing or in the new building might be deemed obligatory, and came to the conclusion that the floor space in the extension available for letting would not be sufficient to reduce substantially these expenses of occupation and maintenance. The Council, therefore, decided to explore the possibility of obtaining a greater frontage to the main road (Tavistock Square and Upper Woburn Place) with a view to the erection of a building thereon which would provide sufficient accommodation for all the activities of the Association for many years to come, would allow for all reasonable expansion and would, for the time being, ensure for the Association a reasonable return upon the capital expended in the building.

205. Rough estimates of cost were obtained and checked, as far as might be without incurring considerable expense, by an architect, a quantity surveyor and a builder, and the Council came to the conclusion that it would be a politic act to take from the Bedford Estate a lease of further "front land" in Tavistock Square and Upper Woburn Place. This would give the Association a frontage to the main road of approximately 360 feet with a depth of approximately 100 feet, and upon this site, at a reasonable cost, a suitable building could be erected allowing for the legitimate aims and expansion of the Association.

Organisation.

(Continuation of paras. 42-66 of Annual Report.)

HONORARY SECRETARIES WHO HAVE RELINQUISHED OFFICE.

206. Since the publication of the last Supplementary Report of Council (*B.M.J.* Supplement, June 26th, 1926) the following Honorary Secretaries of Divisions and Branches have relinquished office. The Council realises that the success of the Divisions and Branches, and therefore of the Association, depends to a very considerable extent upon the Honorary Secretaries of the local units of the Association, and desires

to express on behalf of the Association its gratitude to these officers:—

Honorary Secretaries of Divisions.

Division.	Name of Secretary.	Year of Appointment.
Assam Valley	D. P. Williams	1926
Ballymoney, N. Antrim & S. Derry	Wm. Porter	1912

Divisions without Organisation Rules.

207. In accordance with the standing instruction of the Representative Body, the Council reports that the following Divisions in Great Britain are not yet in possession of Rules of Organisation:—Birkenhead, Bromsgrove, Chester, Crewe, East Cornwall, Exeter, Glossop, Horsham, Hyde, Leigh, Monmouthshire, Rotherham, Warwick and Leamington, West Cornwall, West Hertfordshire and Woolwich. These are the only local bodies of the Association in Great Britain not now in possession of Organisation Rules. The Council desires urgently to draw the attention of these units of the Association to the importance of adopting such Rules. Model Rules for the purpose, approved by the Council, can be obtained from the Medical Secretary.

Science.

(Continuation of paras. 77-96 of Annual Report.)

Scheme for Collective Investigation

208. The Council has considered the question of the Association conducting a scheme of collective investigation, and has come to the conclusion that such a scheme, provided it is organised on an effective basis, may be the means of furnishing new data which would assist in the elucidation of many difficult problems.

In its consideration of the matter the following fundamental points have clearly emerged: (i.) that the enquiries undertaken should be of practical value; (ii.) that the scheme must be voluntary and unpaid; (iii.) that the enquiries should not be restricted either to insurance practitioners on the one hand or to insured persons on the other; (iv.) that the subject or subjects should be capable of being dealt with by replies to direct and definite questions; and (v.) that the results of the enquiry, in order to sustain interest, should be available after not too long a period.

After careful consideration of the subjects which might be investigated in this manner, the Council came to the conclusion that Varicose Ulceration and the After-history of Gastro-Enterostomy are two subjects upon which it would appear desirable to obtain further information.

Varicose Ulceration.

209. Varicose Ulceration is a common experience in medical practice and every general practitioner is frequently called upon to treat it. It is accompanied by much pain and discomfort and is responsible for a large amount of disability, especially among women. Its treatment is tedious alike to practitioner and patient; the results are often disappointing; and relapses are common. It is a disease mainly within the province of the general practitioner for it is he who sees the case from beginning to end and it is with him that the provision of treatment rests.

Varicose Ulceration therefore appears to be peculiarly suitable for a collective investigation and record by general practitioners, and the collection and co-ordination of their experience would afford a valuable contribution to clinical knowledge. Especially is it desirable to gain information relative to treatment. At present there are many methods and many claims. By a comparison of results it may reasonably be hoped that the most successful methods will emerge.

The Council proposes to conduct this enquiry through the Divisional machinery of the Association; that is to say, each Division will be asked to obtain the co-operation of a number of practitioners who will undertake to fill in the questionnaires.

The After-History of Gastro-enterostomy.

210. It is desirable to obtain information as to the after-history of those who have undergone the operation of gastro-enterostomy, and many general practitioners are doubtless in a position to supply this information. Surgeons regret that in many instances they are unaware of the history of patients after they have left the hospital, and if reliable information of this order could be obtained it would serve to establish the relative value of the short-circuiting operations when performed for ulcerous, cancerous or other conditions of the stomach, or duodenum.

Clearly this investigation can only be conducted if the surgeons give particulars of the individual cases, and it is therefore proposed to ask surgeons to furnish the names of the patients operated on by them in respect of gastro-enterostomy during a period, say, of five years, together with the names of the general practitioners in charge of the cases. The individual cases would then be followed up by the Head Office through the practitioners concerned, who would be asked to fill in a questionnaire. Should the case have terminated fatally before leaving hospital, the surgeon would be asked to furnish a record to that effect.

211. The Council proposes to organise simultaneous inquiries into the above two subjects in the early autumn of 1927, and

it hopes that this matter, representing as it does an important development of the scientific work of the Association, will be fully discussed in the Divisions and Representative Body so as to ensure the success of the experiment.

Recommendation: That the Representative Body approves the Council's proposals for the carrying out by the Association of the scheme submitted for collective investigation by individual medical practitioners.

Ethics.

(Continuation of paras. 97-101 of Annual Report.)

MACHINERY FOR DEALING WITH PROFESSIONAL DISPUTES.

212. At the instigation of the Council of the Metropolitan Counties Branch the Council has considered the question of the present methods adopted by the Association in dealing with professional disputes and the possibility of further developments, including a suggestion that a Court of Arbitration might be created by the Association. The Council submits for the information of the Representative Body in Appendix I. a report on the whole question and recommends:—

Recommendation: That having reviewed the existing machinery of the Association as regards ethical matters the Representative Body is of opinion that no extension of that machinery is at present necessary or desirable.

Medico-Political.

(Continuation of paras. 102-138 of Annual Report.)

LUNACY LAW AND MENTAL DISORDER.

213. The Council has not yet been able to carry out the directions contained in the following Minute 115 of the A.R.M., 1926:—

Minute 115.—Resolved: That the following Motion be referred to the Council:—

> That the Council be requested to take all necessary steps as soon as possible to deal with the situation that has arisen as a result of the findings of the jury in the Harnett v. Fisher case, with the view of protecting the interests of the medical profession;

as the case in question was until quite recently *sub judice* and because the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales) was not published until too late to enable the Council to deal with it fully in this report. The Chairman of the Lunacy Law and Mental Disorder Committee will, on behalf of that Committee, circulate confidentially to representatives prior to the Representative Meeting a memorandum dealing with the Report of the Royal Commission and Minute 115 of the A.R.M., 1926, so that the subject may receive consideration, thus enabling the Council to take action during the forthcoming year.

FORM OF DEATH CERTIFICATE.

214. Under Section 6 of the Births and Deaths Registration Act, 1926, which comes into operation on 1st July, 1927, a new form of death certificate will be issued. The certificate will consist of three parts—namely, a counterfoil to be retained by the doctor; a certificate of the cause of death to be completed by the certifying practitioner and forwarded by him (franked envelopes being supplied) to the local Registrar, and a written notice by the practitioner to the informant that the certificate of the cause of death has been signed and forwarded to the Registrar. This proposal was reported to the Representative Body in para. 82 of the Annual Report for 1925-26.

The Council has had submitted to it by the Registrar-General, and takes no exception to, the new form of the certificate of the cause of death which will read as follows:—

Cause of Death.

I.

Immediate cause† ... ... a.....

Morbid conditions, if any, giving rise to immediate cause (stated in order proceeding backwards from immediate cause) ... ... b.....
c.....

II.

Other morbid conditions (if important) contributing to death but not related to immediate cause ... ...
.....

†This means the disease, injury or complication which caused death—NOT the mode of dying, as *e.g.*, heart failure, asphyxia, asthenia, etc.

USE BY MIDWIVES OF PITUITARY PREPARATIONS.

215. The use by midwives of pituitary preparations has engaged the attention of the Association since 1921, in November of which year the Ministry of Health and the Central Midwives Board were informed that the Association considered it undesirable that midwives should be allowed to use pituitary preparations and drugs of a like character. The Ministry of Health stated that though the Minister recognised that there might be exceptional circumstances (*e.g.*, postpartum hæmorrhage) in which a midwife might be justified in administering pituitrin, he considered that this was a drug which should usually only be used by a midwife under the direction of a doctor. The Ministry was not disposed to carry the matter further. The Central Midwives Board stated that in its experience of nearly nineteen years it had never had a case before it in which a midwife had been found to have administered a drug improperly.

Notwithstanding further representations by the Association pursuant to instructions of the Annual Representative Meetings of 1922 and 1923 neither the Ministry nor the Board have altered their attitude in this matter, and in July, 1924, the Council reported to the Representative Body that it considered no useful purpose would be served by making further representations thereon. A proposal that the protest should be continued was negatived.

The Annual Representative Meeting, 1926, however, passed the following resolution:—

Minute 121.—Resolved: That midwives should not be allowed to use pituitary preparations under any circumstances,

and the Council in view of its previous experience in regard to this matter, came to the conclusion that it would be necessary to obtain definite evidence of the misuse of pituitary preparations by midwives before going further. In spite of its efforts no such evidence is forthcoming and the Council has found itself unable to take any action in furtherance of Minute 121 of the Annual Representative Meeting, 1926.

TRADE DISPUTES AND TRADE UNIONS BILL.

216. The Trade Disputes and Trade Unions Bill proposes "to declare and amend the law relating to trade disputes and trade unions to regulate the position of civil servants and persons employed by public authorities in respect of membership of trade unions and similar organisations, to extend Section 5 of the Conspiracy and Protection of Property Act, 1875, and for other purposes connected with the purposes aforesaid."

217. The Council is of opinion that there are only three points in the Bill which may possibly affect the Association, namely, (i.) Clause 3, which provides that it shall be unlawful to attempt to persuade or induce a person to work or abstain from working in a manner calculated to intimidate that person, "to intimidate" being defined as meaning:—

> "to cause in the mind of a person a reasonable apprehension of injury to him or to any member of his family or of violence or damage to any person or property, and the expression 'injury' includes injury other than physical or material injury."

this may possibly affect the ethical procedure of the Association; (ii.) Clause 5, which prohibits established civil servants from being members of any organisation (other than one, membership of which is confined to persons employed by or under the Crown) the primary object of which is to influence or affect the remuneration and conditions of employment of its members—this clause might possibly be held to prohibit established civil servants being members of the Association; and (iii.) the following definition of the word "strike" contained in Clause 8 (2):—

> "the cessation of work by a body of persons employed acting in combination, or a concerted refusal, or a refusal under a common understanding of any number of persons who are, or have been employed, to continue to work or to accept employment."

218. The efforts of the Council have been confined to trying to clear up certain ambiguities in the Bill which might be held to affect the Association. But the general principle which has guided any action taken is that if Parliament should consider that in the interests of the community certain restrictions should be put on organisations, whether trade or professional, the Association should accept these conditions and accommodate itself to them so long as they apply equally to all such organisations.

MEDICAL DEFENCE.

219. In continuation of para. 122 of its Annual Report the Council reports that the Medical Defence Union and the London and Counties Medical Protection Society in reply to

the following three specific questions submitted to them in relation to medical defence:—

(a) Whether certain expenses, legal and other, incurred by an insured member of either Society in connection with procedure pending the decision of whether or not a case would be taken up by the Society, would be borne entirely by the Society in the event of the Society deciding that it could not proceed with the case;

(b) whether certain personal expenses incurred by an insured member of either Society such as travelling expenses, absence from home over-night, etc., could be borne in part or in whole by the Society in return for the annual subscription;

(c) whether a member of either Society was covered in regard to *all* expenses of Solicitor and client as between himself and the Society's Solicitor;

have stated:—

(1) The two Societies bear all expenses, legal and other, incurred by them in deciding whether or not cases are to be taken up by the Societies, if such expenses have been incurred or authorised by the Societies, even though the decision subsequently is that the cases are such that the Societies do not feel that they should be proceeded with. They do not, however, undertake to pay expenses incurred by members without the authority of the Societies.

(2) With regard to personal expenses incurred by members in attending Court as Plaintiffs or Defendants, these are not paid except in special circumstances; and in certain instances this has been done. In the event of witness fees being recovered from the other side, these are paid to the members should they desire to accept them.

(3) Members are assured of being covered as regards *all* expenses of Solicitor and client as between them and the Society's Solicitors Any damages recovered are paid intact to the members."

The Council has received the following joint communication from the two Societies which had also been forwarded by the Societies to the medical press for publication:—

"We are directed to request that you will kindly publish in your next issue the following statement with regard to the circumstances in which the Council of either of the two English Defence and/or Protection Societies may be prepared to advise and/or defend and/or indemnify a member.

Subject to the provisions of the Articles of Association, the Council may on application from a member who is in benefit—

(1) Advise on any matter connected with medical practice.

(2) Initiate or defend or assist in defending, proceedings where a question of professional principle is involved.

(3) In the event of an adverse verdict, or of a settlement out of Court, provide indemnity against damages and costs of the other side.

(4) Defend or initiate and carry through proceedings to vindicate a member's professional interests, honour, or character whenever they have been threatened or jeopardised.

(5) Defend and/or indemnify a member in proceedings brought against him in respect of the act or omission of

(a) a partner who is a member of any other Defence or Protection Society with whom a reciprocal arrangement has been entered into;

(b) an assistant who is a member of any other Defence or Protection Society with whom a reciprocal arrangement has been entered into;

(c) an assistant not himself a member of any Defence or Protection Society, provided that the member has paid an additional annual subscription of 10/-;

(d) a locumtenent, whether a member of any Defence and/or Protection Society or not;

(e) a subordinate medical officer, including a house surgeon or similar hospital medical officer, whether a member of any defence and/or Protection Society or not;

(f) a non-medical assistant or subordinate, such as a nurse, dispenser, X-ray operator, masseuse, or laboratory assistant, save in a case where in the opinion of the Council such non-medical assistant or subordinate was with the sanction of the member, whether express or implied, carrying out

(i.) a duty which should only be undertaken by a medical practitioner; or

(ii.) without medical supervision a duty which should only be undertaken by a non-medical assistant or subordinate under the orders and direct supervision of a medical practitioner."

SHOPS (EARLY CLOSING) ACTS.

220. The Secretary of the Early Closing Association in giving evidence before the Home Office Committee of Enquiry into the working of the Shops Acts, urged the permanent adoption of the Shops Act, 1920, which provides compulsory 8 p.m. closing of shops during the week and 9 p.m. on Saturdays, and produced medical testimony that the long pre-war hours of shop workers were detrimental to the health of those workers. In response to a request by the Committee of Enquiry for up-to-date medical evidence showing that the early closing of shops had proved of benefit to shop workers, the Early Closing Association invited the Association to express its opinion, but the Council replied that it was not in a position to express any opinion on the subject as the Association had not undertaken any special enquiry into it.

LANDLORD AND TENANT (NO. 2) BILL.

221. The Landlord and Tenant (No. 2) Bill, provides "for the payment of compensation for improvements and goodwill to tenants of premises used for business purposes, or the grant of a new lease in lieu thereof; and to amend the law of landlord and tenant." As it is not certain that the Bill will apply to medical practitioners and as the Council considers that practitioners should be eligible for compensation for improvements made to premises which they have rented and for compensation for the loss of goodwill consequent upon the termination of tenancies, it has asked the Medical Committee of the House of Commons to arrange for an amendment to be put down in Committee to secure that the Bill shall apply to professional men

FACTORIES BILL.

222. In continuation of the report contained in para. 121 of the Annual Report, the Committee reports that the Ministry of Health, in reply to the Association's request for the receipt of a combined deputation from the Association, Society of Medical Officers of Health and Association of Certifying Factory Surgeons, stated that as the matter had already been discussed between representatives of the associations and the Home Secretary, when the Home Secretary had stated his reasons against the proposed transfer of the health services under the Factory Act to the Ministry of Health, the Ministry was of opinion that little use would come of any further discussion on the matter.

The Council has therefore decided not to press the Ministry any further on this matter, but proposes to lay the views of the Association thereon before the Medical Parliamentary Committee of the House of Commons.

INTERNATIONAL MEDICAL SEA CODE.

223. The Council is considering the setting up of a Committee to formulate an International code for inter-communication between medical officers of ships at sea.

OPTICIANS AND STATE RECOGNITION.

(Continuation of para. 128 of Annual Report.)

224. The Council has forwarded its memorandum of evidence upon the above subject to the Departmental Committee, and has appointed Dr. Wallace Henry, Mr. N. Bishop Harman, together with the Medical or Deputy Medical Secretary, witnesses to give oral evidence before the Departmental Committee in support thereof.

Parliamentary Elections.

(Continuation of para. 139 of Annual Report.)

FUTURE OF MEDICAL REPRESENTATION IN PARLIAMENT FUND.

225. The Medical Representation in Parliament Fund was inaugurated in 1918 with the following objects:—

"To ensure the presentation to Parliament of expert medical opinion on matters relating to National Health or involving the welfare of the medical profession, and for this purpose (i) to secure a larger representation of the medical profession in Parliament by obtaining suitable medical candidates for Parliament and suitable constituencies, and assisting when necessary by monetary grants such candidates, irrespective of political party; (ii.) to help maintain approved Members of Parliament as may be deemed necessary or advisable; (iii.) to promote such other Parliamentary action as may be thought advisable."

As the Fund has not received the support that was expected, the Council has seriously considered whether or not the Representative Body should be recommended to wind it up.

226. During the 10 years the Fund has been in existence a total of approximately £3,000 has been received, half being received from individual members of the Association and half from the voluntary funds of Panel Committees. During the last three or four years the subscriptions from both these sources have been steadily dwindling.

227. Notwithstanding the poor response of the profession to the Association's efforts to establish a fund which should become an important factor in securing adequate representation in Parliament of the medical profession, the Council is extremely loath to suggest the winding up of the Fund. More especially is this so in view of the fact that the Trustees of the National Insurance Defence Trust at their recent meeting have placed at the disposal of the Parliamentary Elections Committee the sum of £1,000 for the support of medical candidates for Parliament, subject to the following conditions:—

(1) That candidates be approved by the Trustees of the National Insurance Defence Trust.

(2) That the candidates be also supported by the Trustees of the Medical Representation in Parliament Fund of the B.M.A.

(3) That the Trustees of the N.I.D.T. are adequately represented on the Parliamentary Elections Committee;

(4) And that the Panel Conference be informed accordingly.

228. In making the following recommendations attention is called to the suggestion that special attention be paid to the University seats. It is believed that these seats offer a fair opportunity for a certain number of medical candidates if carefully selected. Moreover, in these contests party feelings play less than the usual part, and medical voters would be more likely to support a really good medical candidate as such, even if his party complexion were not the same as their own. The Council would be glad to have the opinion of the R.B. on this matter.

The Council therefore recommends:—

Recommendation: That the Council be authorised to accept the offer of the Trustees of the National Insurance Defence Trust, and to adjust the composition and procedure of the Parliamentary Elections Committee accordingly.

Recommendation: That the Representative Body express the opinion that in view of the offer of the Trustees of the National Insurance Defence Trust members be urged to contribute to the Medical Representation in Parliament Fund so that the volume of individual contributions to that Fund shall reach a total at least equal to the promised contribution of the Trustees of the National Insurance Defence Trust.

Recommendation: That the Parliamentary Elections Committee be instructed to pay special attention to the possibility of securing the election to Parliament of medical candidates for University seats.

Public Health and Poor Law.

(Continuation of paras. 140-149 of Annual Report.)

Co-operation between B.M.A. and the Society of Medical Officers of Health.

229. Attention has been called to the fact that paragraphs 142 and 148 of the Report of the Council may be open to some misconception. Paragraph 142 stated that it has been decided by a Conference between representatives of the B.M.A. and of the Society of Medical Officers of Health that "The offices of the Association and of the Society shall keep each other advised in all matters relating to prospective public health appointments, and that the Society shall make it clear to all its members that any action taken locally must be by and through the B.M.A. Division." To those who are conversant with the arrangements made between the Association and the Society of Medical Officers of Health it will be clear that the action referred to in the paragraph is "action of a medico-political character," but in order to make this quite clear it is desirable to state it in these terms. Paragraph 148 refers to the circumstances in which the Association will send deputations to local authorities in support of representations made on behalf of public health medical officers. In view of misunderstandings it should be made clear that the deputations referred to are those from the Central Office of the Association and not those which are sent wholly by the Division or Branch.

Public Education in Health.

230. Consideration of this matter arose out of the following resolution of the Representative Body, 1926:—

Minute 139.—Resolved: That the Council be instructed to consider how Branches and Divisions of the Association as voluntary bodies, could make their contribution towards Public Education in Health as advocated by Sir George Newman, K.C.B., M.D., F.R.C.P., in his Memorandum (issued in January, 1926) addressed to the Minister of Health.

231. The Council has given careful consideration to Sir George Newman's Memorandum on "Public Education in Health," with the principal conclusions of which the Council fully agrees. These are *inter alia* (a) that public opinion is still in much need of education on the applications of preventive medicine which may be made by the individual; (b) that there should be co-operation for this purpose between local authorities and the individual citizen; (c) that voluntary bodies might do much to lead public opinion and to stimulate local authorities; and (d) that the objects aimed at should be to arouse enthusiasm and desire for good health and to ensure consequential action.

232. Sir George Newman's Memorandum, after reviewing briefly the growth during the last 100 years in the science and art of medicine, the personal aspect of preventive medicine, the educational work of the Ministry of Health, the Board of Education, local authorities and voluntary bodies, and public health education in other countries, states:—

> "There is great and exceptional need for public education in health. First, there has been a growth of knowledge in the science and art of medicine and its application to many morbid conditions now known to be preventable; secondly, there has been a rapid development of the whole system of sanitary governance and public medical services—*and public opinion has not kept pace with these two profound changes.* Yet without an enlightened public opinion the measure and value of scientific and legislative advance is impaired. It is true that attempts have been made—all of them public-spirited, many of them gallant, and a few of them even heroic—by the voluntary service of persons or societies to meet this situation and fill the breach. On the whole these efforts have met with encouraging, and sometimes enduring, success. But such enterprise is in need of guidance and support, and is liable to some degree of misdirection. It lacks unity, tends to become chaotic, is, without adequate supervision, and is, all too often, insufficiently related to the new knowledge and the expanding organisation."

233. Although the Association has no stated policy in regard to this matter, it has been taken for granted that the Association is in favour of the education of the public in health matters, and the Council considers that the Association ought to take its share in this education, not only because it is one of the objects of the Association to "promote the medical and allied sciences," but because there is at the present time so much ill-advised, silly, and harmful publicity on health matters that it behoves the Association to set an example as to how the necessary education of the people in health matters ought to be given, and also because the doctor ought to take a leading part in any movement having for its object the better health of the community.

234. So far as central action is concerned the Council is of opinion that a Hastings Lecture on the lines of that given last autumn by Sir Berkeley Moynihan, should be given to the public from time to time.

235. It is believed that much can and should be done by the Divisions and Branches of the Association to promote health education among the people. The local units of the Association might take action either alone or in co-operation with the local authorities. Section 67 of the Public Health Act of 1925 provides means whereby the local authorities can finance such work. The section reads as follows:—

> 67. (1) Any local authority or county council may arrange for the publication within their area of information on questions relating to health or disease, and for the delivery of lectures and the display of pictures in which such questions are dealt with, and may defray the whole or a portion of expenses incurred for any of the purposes of this section.
>
> (2) The Minister of Health may, for the purposes of this section, make rules prescribing restrictions or conditions subject to which the powers conferred by this section may be exercised.

Some authorities have taken advantage of this power; others have ignored it or are doing little. It is suggested that each Division should call the attention of the local authorities within its area to this section of the Public Health Act, either by a memorandum or by deputation, and offer to assist in health propaganda work. The offer should be accompanied by a suggestion (the reception of which should be prepared in advance by discussion with the Medical Officer of Health) that local health education should be dealt with by a Committee on which, in addition to representatives of the local authority there should be others interested in health propaganda, including representatives of the Division.

236. Generally speaking the Division should do its best to stimulate the local authority to interest the public in health matters, and should be prepared, if asked, to nominate lecturers. A scheme for such a purpose might include the following methods of education:—

(a) Lectures and cinema demonstrations on general health topics such as food, general sanitation, housing, insect pests, industrial hygiene, personal hygiene, cancer, tuberculosis, infectious diseases, rheumatism, etc.

(b) The elucidation of some local problem of a medico-sociological nature.

(c) Visits to suitable centres where practical demonstrations could be given, *e.g.*, dairy farms, hospitals.

(d) Health holiday camps.

(e) Health exhibitions.

(f) Distribution of literature, exhibition of posters, etc.

237. In addition to this work in conjunction with the local authority, the Divisions and Branches might themselves promote popular lectures, either open to the general public or confined to specially invited sections of the public. They might arrange for conferences and debates on medico-sociological problems of topical interest, open either to selected members of the public, or members of another profession, or members of voluntary societies formed to consider and deal with various social problems. The Divisions might also initiate and help to carry on discussions in the local press which would allow urgent local-health-matters to be ventilated.

238. No really active work of this kind could be carried out without some cost, the amount of which it is quite impossible to forecast. If the Divisions could not undertake the work they desired to do within the limits of the grants made to them by their Branches they would have to make an application to the Council for a Supplementary Grant. Any additional expense caused by this new form of activity would therefore be in the control of the Council.

239. It is believed that such work would be productive of many advantages to the public and indirectly to the Association. In the first place it would prove to the press and the public that the Association, in objecting to the sensationalism which too often takes the place of effective health propaganda, was not taking a narrow and selfish view and was prepared with constructive suggestions as to better methods. It would also show that the Association is interested in the health of the public in the widest possible way, prevention as well as cure.

240. If the Divisions were to initiate health education work or help the local authorities in such work the Council is of opinion that such action would tend to raise the status of the local profession and of the Association, and would give the Divisions much greater influence than they now have with the public and with public authorities.

241. The above proposals were submitted to the Society of Medical Officers of Health for its comments, and, in reply, the following resolutions adopted by the Society's Council on 18th March, 1927, were received with a statement that it considered its own and the Association's schemes should be complementary one to the other and that there should be valuable co-operation if the Branches and Divisions of the Association interested themselves in these matters:—

(1) That a Standing Committee to be called (?) The Central Health Education Committee be set up by the Council of the Society to advise and assist local authorities in reference to the education of the public in health matters under Sect. 67, Public Health Act, 1925, and to promote such other health education work as the Society may from time to time determine.

(2) That the Committee shall consist of twelve members of the Society, and that the following bodies be invited to nominate one member each, viz.: The County Councils' Association; the London County Council; the Metropolitan Boroughs Joint Standing Committee; the Association of Municipal Corporations; the Non-County Boroughs Association; the Urban and Rural District Councils' Associations; and the central bodies representing local Education and Insurance Committees.

(3) That the Committee be authorised to invite Medical Officers of Health to secure from their Councils adequate subscriptions for such purposes of the Committee as will enable local authorities to secure greater economy and efficiency by co-operation in health education work.

(4) That subject to adequate financial support from local authorities, the Society shall appoint for a trial period a half-time Assistant Secretary for propaganda work whose duties will include (a) to assist Medical Officers of Health in development of their educational schemes; (b) to utilise services offered by voluntary health societies; (c) to organise services of lecturers, lantern slides, motion pictures, exhibits, etc.; (d) to ascertain and advise on requirements for central publication of posters, leaflets, etc., for sale to and distribution by local authorities; (e) to arrange conferences or discussions on suitable subjects, such as Health Advertising, Health Education in Schools, Cancer, etc.; (f) to organise health educational tours to places, institutions, conferences, etc., of health interest.

Note.—In connection with the foregoing resolutions, the Council of the Society proposes to associate itself with a health journal for distribution to local authorities, any profit accruing to the Society therefrom being devoted to the educational schemes of the Society.

The Council recommends:—

Recommendation: That the Representative Body approves the proposals of the Council for action by the Divisions and Branches in assisting in the education of the public in health matters, and instructs the Council to take all necessary steps with a view to putting the proposals into operation.

PUBLIC HEALTH APPOINTMENTS.

242. From 19th June, 1926, up to and including 11th June, 1927, the Association has dealt with matters relating to 180 appointments under the scale of minimum commencing salaries for public health appointments. In 151 of these the scale salary has either been offered or secured after negotiation.

National Health Insurance.

CERTIFICATION AND SICKNESS BENEFIT

(*Continuation of paras. 156-7 of Annual Report.*)

243. A reply has been received from the Minister of Health to the communication addressed to him by the Insurance Acts Committee upon the above matter in January last (set out in para. 157 of the Annual Report), and is to be discussed at the forthcoming deputation to the Ministry of Health.

SPA TREATMENT FOR INSURED PERSONS.

244. During the past two or three years negotiations have been proceeding between the various Spa authorities throughout the country and certain approved societies, with a view to providing for insured persons spa treatment as an additional benefit. This question has also been under consideration by the British Committee on Rheumatism, upon which the Association was represented by Dr. E. R. Fothergill. In the early part of the year, the Council decided to arrange a conference of representatives of various interested bodies to consider this question of the provision of spa treatment to insured rheumatic patients, with special reference to the relationship between spa and insurance practitioners, and invited the following bodies to send representatives—Spa Practitioners' Association, Spa Hospitals, Approved Societies, the Federation of Medical and Allied Services, British Spa Federation, British Committee on Rheumatism, and the Association. The Conference was held at the B.M.A. House on February 9th, when there were present some 33 representatives of the various bodies, Dr. H. G. Dain being in the Chair. A full report of the proceedings of the Conference appeared in the *B.M.J.* Supplement of March 12th, 1927, from which it will be seen that there is little likelihood of any definite action being taken in the immediate future. Arrangements were made for a small Committee to draft and submit to a further conference (to be held in May or June) a scheme for the provision as soon as possible of increased facilities for the treatment of the insured rheumatic population.

245. No action in this connection has been taken, however, owing to the subsequent receipt of an intimation from one of the principal representatives of the approved societies that the Joint Committee of Approved Societies after discussing the question with representatives of other associations of approved societies and the British Spa Federation, came to the definite conclusion that in view of the increased costs of medical and optical benefit and dental treatment, together with the long periods of unemployment, and the serious outbreaks of illness which had seriously increased the cost of sickness benefit, approved societies were not likely to be able at the next valuation to embark on any general schemes for the treatment of rheumatic insured persons at Spas.

DISCIPLINARY PROCEDURE.

(Continuation of para. 158 of Annual Report.)

246. The Insurance Acts Committee has formulated its proposals referred to in para. 158 of the Annual Report, for the amendment of various aspects of the disciplinary procedure, and has arranged for an early discussion thereof between representatives of the Ministry and of the Committee.

NATIONAL HEALTH INSURANCE AND PATHOLOGICAL LABORATORY SERVICES.

7. Schemes are being set up in various parts of the country, whereby use is made of the services of pathological laboratories attached to voluntary hospitals

or local authorities, but no adequate arrangements are made for the remuneration of the pathologist in respect of the extra work which would devolve upon him. The Insurance Acts Committee therefore proposes to discuss the matter with the Minister of Health. In the meantime, Local Medical and Panel Committees have had their attention drawn to the matter, and have been requested to withhold any decision on any scheme for the provision of pathological services in their areas pending the result of the discussion.

POSITION OF INSURANCE COMMITTEES.

248. In view of the attitude which has been adopted by some Local Medical and Panel Committees in respect of the Association's proposal to the Royal Commission on National Health Insurance that the duties of the present Insurance Committees should, under certain conditions, be transferred to the Committee of the new local health authority, it was thought advisable to issue to all those Committees a memorandum (M. 28) re-stating the policy of the Association in regard to the unification of health authorities, and particularly with reference to the position of Insurance Committees.

NATIONAL INSURANCE DEFENCE TRUST.

249. The audited statement for the year 1926 of the above Trust, of which the members of the Insurance Acts Committee for the time being are Trustees, is appended hereto for the information of members of the Representative Body (*see* Appendix II.).

ADMINISTRATION OF OPHTHALMIC BENEFIT.

(Continuation of paras. 159-162 of Annual Report.)

250. The general conditions attached to the administration of this additional benefit by approved societies are receiving the consideration of the Council in view of the general unsatisfactory nature of the administration.

New proposals for dealing with Insured Ophthalmic Cases.

251. The Council for some time past has been faced with the fact that the present arrangements for the administration of ophthalmic benefit, under which the Association set up a list of ophthalmic surgeons willing to treat insured persons and to prescribe glasses at a fee of £1. 1s. 0d., are working badly. The list is taken advantage of by only some of the smaller approved societies, while the larger societies, representing the vast majority of insured persons, continue to refer *practically* all their cases to opticians. The latter societies, while agreeing that the ideal arrangement would be to have all their members who need it examined by a specialist, say that their funds will not allow them to pay the £1. 1s. 0d. fee in all cases recommended by insurance practitioners for *ophthalmic treatment*. They also contend that insurance practitioners do not discriminate in the persons so recommended, many of whom the societies hold are straightforward refraction cases which can easily be dealt with by an optician.

252. Some societies have joined together and formed a so-called "charitable institution," the National Insurance Beneficent Society, which administers ophthalmic benefit on behalf of those societies by means of clinics at which treatment is carried out by an ophthalmic surgeon remunerated at the rate of £3. 3s. 0d. per session of two hours, at which it is expected some 8-12 new cases would be seen. These clinics have been set up in some three or four of the large towns throughout the country and extensions thereof are understood to be under contemplation. The Council hitherto has found itself unable to approve the acceptance of these appointments by practitioners, principally because of the policy of the Association that remuneration in connection with specialist benefits should be per consultation at private surgeries. In view, however, of all the circumstances, the Council has felt compelled to give further consideration to the policy of the Association in this matter. It has therefore had under consideration a proposal for the setting up of ophthalmic treatment clinics in urban centres throughout the country in which the treatment would be carried out by ophthalmic surgeons and all the dispensing of spectacles by opticians who confine their operations solely to dispensing and undertake to do no prescribing. The Association would be represented upon the central body controlling the scheme.

253. Members of approved societies participating in the proposed scheme would not necessarily go to their insurance doctor to ascertain his opinion as to the need for ophthalmic treatment, but would apply to their approved society which would refer the case to the central body of the proposed scheme. The latter would then make arrangements for the treatment being carried out locally. The local arrangements would consist eventually of clinics staffed by a local ophthalmic surgeon or surgeons who would be paid a fee of £4 4s. 0d. per session of two hours at which they would be expected to see not more than 10 new cases. Until, however, the volume of work in any locality was sufficient to warrant the adoption of the clinic system, it is expected that the local ophthalmic surgeon or surgeons selected would see the cases at their own consulting rooms at a less fee than the present £1. 1s. 0d., it being expected that there would always be more than one case to be seen at one time even in the beginning.

254. The scheme is as yet only in embryo, and whether it will go further depends largely on the action of the Representative Body. The opinion of the Association has always been that ophthalmic benefit, along with all other benefits of a medical nature, should be administered by, and through Insurance Committees, and this will continue to be pressed on the attention of the Ministry of Health whenever occasion offers.

255. But in the meantime the economic circumstances of the case must be faced. The main appeal of the optician so far as the approved societies and also many working class people are concerned is that of cheapness. A guinea fee, plus the cost of glasses is said to be beyond the means of such bodies and persons. It is probable that if the profession was itself prepared to set up or participate in a scheme which would ensure expert diagnosis followed by expert fitting, at a reasonable price, the main attraction of the sight-testing optician for those approved societies employing him, would cease to exist. Furthermore, the temptation to send insured persons or others of similar status to hospitals for sight-testing would be removed. The Council considers that some such scheme as the above would be a valuable auxiliary, in some large industrial centres, to the present method, which will still remain the only practicable method for a large part of the country. The Council being of the opinion that the Representative Body should reconsider the position makes the following recommendation:—

Recommendation: That the Representative Body approves the principle of providing ophthalmic benefit through clinics in large centres as an arrangement auxiliary to the existing scheme of attendance by ophthalmic surgeons privately, subject to the arrangements under which such clinics are established being approved by the Council.

Treatment of Ophthalmic Benefit applicants at voluntary hospitals.

256. The Council has sent a circular letter to the boards of management and medical staffs of voluntary hospitals pointing out that many persons insured under the National Health Insurance Acts and whose approved societies are giving an ophthalmic benefit are obtaining ophthalmic treatment at the expense of charitable funds of voluntary hospitals and receiving the gratuitous services of the medical staff thereof. The Council has expressed the hope that boards of management will make arrangements whereby any insured person presenting himself for ophthalmic treatment at a hospital will be referred back to his approved society if it is ascertained that his society is administering ophthalmic benefit and that the applicant is eligible for that benefit.

Medical Benevolence.

(Continuation of para. 179 of Annual Report.)

B.M.A. CHARITIES TRUST FUND.

257. From 1st January to 30th April, 1927, the sum of £809 was received for distribution among the existing medical charities at the discretion of the Trustees, and £800 has since been distributed as follows:—

Royal Medical Benevolent Fund	£400
Royal Medical Foundation of Epsom College ...	£200
Royal Medical Benevolent Fund Guild	£120
Sir Charles Hastings Fund	£50
Royal Medical Benevolent Fund Society of Ireland	£30

258. In addition, the following amounts have been collected for and transmitted to the under-mentioned Funds:—

	£	s.	d.
Royal Medical Benevolent Fund	1,074	17	7
Royal Medical Foundation of Epsom College	749	0	3
Royal Medical Benevolent Fund Society of Ireland	22	19	0
Sir Charles Hastings Fund	56	16	9

259. The total amount collected by the Association for medical charities since the beginning of the year shows an increase of some £350 as compared with the corresponding period last year.

CONSTITUTION OF CHARITIES COMMITTEE.

260. Consideration was not given to Minute 39 of the 1926 A.R.M. (expressing the opinion that the personnel of the Charities Committee should be enlarged and should include territorial representation) in time to allow of the necessary two months' notice being given under By-law 47 of an alteration of the Schedule to the By-laws. The Council has, however, considered the matter and suggests that the Schedule to the By-laws relating to the constitution of the Charities Committee should be altered so as to provide that four mem-

bers shall be appointed by the Representative Body (two by the English representatives, one by the Scottish representatives and one by the Welsh representatives), two members shall be appointed by the Council, and that the Association's representatives on the Council of Epsom College and the Committee of Management of the Royal Medical Benevolent Fund shall be *ex officio* members of the Committee. This would mean a net increase of two in the membership of the Committee. If this proposal meets with the wishes of the Representative Body, the necessary alteration of the Schedule will be drafted and submitted to the Representative Body in 1928, due notice being given to enable it to come into operation at the Annual Representative Meeting in that year.

Scotland.

SALARIES OF MEDICAL OFFICERS EMPLOYED BY LOCAL AUTHORITIES.

261. The Council has had under consideration the question of minimum commencing salaries payable to medical officers employed by local authorities, and negotiations are proceeding hereon with the Scottish Board of Health and the Scottish Branch of the Society of Medical Officers of Health

READING ROOM FACILITIES AT THE SCOTTISH OFFICE.

262. The Council has authorised the Scottish Committee to furnish one of the rooms at the Scottish House of the Association as a reading and writing room. It may also be found possible to provide light refreshments. It is hoped that these developments will be found useful not only by members in Edinburgh but by the many members who visit that city.

Oversea Branches.

(Continuation of paras. 187-192 of Annual Report.)

263. The reports of the Australian Federal Committee, of the Federal Council in South Africa and of practically the whole of the Branches of the Association overseas show a fine record of activity. The following points are of special interest.

AFRICA.

264. The Federal Council in South Africa, under the able Chairmanship of Dr. A. J. Orenstein, has applied itself with remarkable energy to the many problems confronting the profession there following upon the new situation caused by the creation of the Medical Association of South Africa (British Medical Association). Some of the more important matters dealt with have already been referred to in the Council's Annual Report (*B.M.J.* Supplement, April 23rd, paras. 54-6). The membership in South Africa has increased by over 25 per cent. during the year; many new Divisions have been formed; arrangements have been made whereby the South African Medical Congress will in future be run by the Federal Council; the question of payment of the medical staffs of public hospitals has been approved in principle and has been referred to the Branches for consideration; a central benevolent fund has been established; and many other matters have been dealt with. There is abundant evidence that the profession in South Africa is settling down to the new conditions, and the Council, on behalf of the whole Association, offers its congratulations to all concerned.

265. The Border Branch has held seven meetings during the year. A new Queenstown Division has been formed and arrangements are in hand for the formation of Divisions in other areas of the Branch.

266. The Cape Western Branch has completed a scheme for the organisation of the profession in the area in the event of an epidemic of influenza in Cape Town, and the organisation has been placed at the disposal of the medical officer of health of the city. The question of hospital administration has been discussed by the Branch. A record of 14 meetings completes a satisfactory year's work.

267. The Cape Midlands Branch assisted in the collection of information which resulted in a meeting of the Federal Council with the Administrators of the Railway Sick Fund to which considerable importance is attached by railway medical officers throughout the Union.

268. The Natal Coastal Branch reports meetings well attended and much enthusiasm. The Council is glad to know that the Addington Hospital dispute, which has been an outstanding difficulty for some years, has now terminated satisfactorily. Both the Natal Coastal and the Orange Free States and Basutoland Branches report increases in their membership of nearly 100 per cent. The next South African Congress is being held at Bloemfontein at the invitation of the latter body.

269. Conditions in the East African Medical Service have naturally continued to engage the attention of the Kenya, Tanganyika Territory and Uganda Branches, and the Council is glad to note that all three Branches are in an active and flourishing condition. Practically the whole of the doctors in these areas are members of the Association, a fact all the more gratifying when it is remembered that the extensive areas of these Branches and other circumstances are such as to make matters of organisation extremely difficult. The Zanzibar Branch has also been most active as regards East African Medical Service matters.

ASIA.

270. The Bombay Branch has resumed its activities during the year. Frequent and successful meetings are now held, and the Branch is considering a scheme for the registration and supervision of midwives in Bombay.

271. Numerous meetings have been held during the year by the Ceylon Branch and an increase in the membership of the Branch is the natural outcome. It is expected that the incorporation of the Branch will shortly be completed. The Burma and South Indian and Madras Branches also report a year of successful activity; the former body is preparing a Bill in the matter of medical education which will be placed before the Burma Legislative Council.

272. The Council congratulates the Malaya Branch on its enterprise in taking over the *Malaya Medical Journal*, which is now the official organ of the Branch. The question of the levying by the Government of the F.M.S. of drug fees upon medical practitioners engages the serious attention of the Branch, and the home Association hopes to be in a position to assist the Branch in this matter.

AUSTRALASIA.

273. The outstanding event of the year has been the second Australasian Medical Congress of the British Medical Association, held in Dunedin, from February 3rd to 10th. The Conference, the proceedings of which were fully reported in the *Journal*, was well attended and was a great success from every point of view, the Sectional Meetings being of high scientific value. The Council offers its hearty congratulations to the President of the Congress, Sir Louis Barnett, and to the members of the Otago Division of the New Zealand Branch, who spared no effort to make the Congress the success it was.

274. There has been a net increase in the membership of the Association in Australasia of 1,200 during the past four years—a figure which is a striking testimony to the virility of the several Branches of the Association there.

275. The Australian Federal Committee under the Presidency of Sir George Syme has had before it many matters of importance to the profession in the Commonwealth. The recently published Report of the Royal Commission on Health, which aims at instituting in Australia a system of National Health Insurance, has now been considered by the Branches there at the instigation of the Federal Committee, and a uniform policy in relation thereto is in process of adoption. The question of Friendly Society lodge practice is a matter constantly engaging the attention of the Australian Branches, and with a view to bringing about more uniform conditions throughout Australia, the Federal Committee has approved in principle a Common Form of Agreement. The Federal Committee is collating the material submitted to it by the Branches concerning the medical services in public hospitals and a report on this matter may shortly be expected.

276. The New South Wales Branch maintains its fine record of activity. It reports 10 meetings, a net increase in membership of 81, and the formation of a new Section of Radiology. A system of B.M.A. Lectures at meetings of local Associations outside the Metropolitan area has been instituted; the Branch has also taken steps to protect the interests of injured workers and their medical attendants arising out of a new Workers' Compensation Act. The portrait of Dr. Crago, who has given unremitting attention to the financial affairs of the Branch for a period extending over 38 years, and who has been mainly concerned in the quest of a new home for the Branch, has been painted in oils by the distinguished artist, Mr. John Longstaff, R.A. The portrait was presented to Dr. Crago at the recent annual meeting of the Branch; and the Council, in the name of the Association, desires to congratulate Dr. Crago on this well-earned testimony to his personality and his long service for the Association.

277. The Queensland Branch has recently endeavoured to improve its organisation by the inauguration of a scheme whereby the State was divided into areas or groups of towns outside the Metropolitan area. Several districts have now been organised in this manner, and local medical associations formed; the Council of the Branch believes that the institution of this scheme will lead to a better understanding of the problems of country doctors generally. One of the matters arising is the urgent need for appointing a travelling organising secretary. The affairs of country hospitals have engaged the attention of the Branch and arrangements are in hand for a meeting of representatives of the Branch with delegates from various hospitals to discuss hospital policy. Altogether, the record of work of the Branch for the year, including as it does no fewer than 14 meetings, is of a very high standard.

278. The South Australian Branch reports many scientific meetings, and meetings of the Council of the Branch, and among the matters of interest is that agreement appears to have been reached between the Branch and the South Australian Friendly Societies Association. The Branch has invited Dr. R. Marshall Allan to deliver the Listerian Oration.

279. The Tasmanian Branch reports that the most important event of the year has been the formation of two Divisions within the Branch; the Northern Division has already held enthusiastic meetings. A successful series of post-graduate lectures and clinics was arranged.

280. The Report of the Victorian Branch covers a wide field of matters of great interest and importance to the profession in Victoria. The membership of the Branch has increased, and many meetings have been held. Numerous ethical problems have been dealt with; the results of the deliberations of the Second Annual Conference of the Branch have been reviewed and appropriate action has been taken; the Melbourne Permanent Post-Graduate Committee, which was founded by the Branch in 1920, organised several series of lectures which were well attended; a Public Questions Committee of the Branch has been formed to give information to the press on matters of medical interest, and the editors of the principal newspapers have approved the arrangement and have agreed that anonymity should be preserved.

281. The Report for 1926 of the Western Australian Branch shows that over 80 per cent. of the resident medical practitioners are members of the Branch. A report on the question of hospital abuse is now under consideration by the Branch.

282. The Report of the New Zealand Branch again shows a gratifying record of activity. The question of hospital reform engages the serious attention of the Branch and a round-table Conference of representatives of the Branch with the hospital Boards and the Health Department has been held. Arising out of this, a scheme for a standardised system of hospitals embodying the community system may be realised. The medical agency instituted in connection with the Branch two years ago is now in working order; it has not only been of assistance to the Branch members, but has materially helped the Branch funds which have now reached the satisfactory figure of over £4,000. An important matter now before the Branch is the question of its incorporation and the building of suitable Branch offices.

West Indies.

283. The Jamaica Branch, which is the oldest of the Branches of the Association overseas, celebrates its 50th birthday in December. Appropriate steps are being taken by the Branch in this connection and the Council hopes to lend any possible assistance in its power.

R. A. BOLAM,
Chairman.

APPENDIX I.

THE MACHINERY OF THE ASSOCIATION FOR DEALING WITH PROFESSIONAL DISPUTES.

(N.B.—The procedure outlined in this Memorandum only applies to those Divisions and Branches which have adopted the Revised Ethical Rules. Home bodies which are not in possession of these Rules have no power to deal with ethical matters.)

As at present practised.

1. In accordance with the Revised Rules governing procedure in Ethical Matters, a complaint regarding the professional conduct of an individual member of the profession residing within the area of a Division has to be sent in writing to the Honorary Secretary of the Division concerned.

2. Notwithstanding this Rule, it frequently happens that complaints by a member of a Division against another member of the same Division are sent to the Head Office direct by the member concerned. In these cases the complainant is requested to send the complaint to the Honorary Secretary of the Division.

3. Upon receipt of the complaint it is the duty of the Honorary Secretary of the Division to refer the matter at once to headquarters for advice, and experience shows that in nearly all instances this reference takes place. When the matter is referred to the Head Office by the Secretary of the Division the terms of the complaint are carefully scrutinised and advice given to the Secretary as to the procedure which should be adopted. In respect of all complaints, it is the duty of the Honorary Secretary of the Division to ascertain at the outset whether the complainant has either personally or by letter afforded the member against whom he makes tl complaint a reasonable opportunity of explanation, and this has not been done to call upon him to do so. Failu by the complainant to take this step within a week may itself be made a matter for consideration.

4. If a complaint by one member of a Division again another appears to be one only affecting the parties personall the Ethical Committee of the Division has power to decide tl case, provided that all parties have, prior to the investigatic of the case, given their consent to accept such decision final. In all other cases the Ethical Committee of tl Division must, after due investigation, make a report of tl facts as found by the Committee from the evidence place before it to an ordinary or special meeting of the Divisio and a recommendation to the Division in one of the form set out in the Ethical Rules. The Division has no optio but to accept the facts as found by its Ethical Committe but it may amend the recommendation.

5. Where a complaint is lodged by a member residing i one Division against a member residing in another Division i the area of the same Branch, the matter is referred to th Secretary of the Branch concerned. The same procedure carried out by the Ethical Committee of the Branch as ha been detailed in connection with the consideration of a com plaint by the Ethical Committee of a Division, except tha the Branch Ethical Committee reports to the Branch Counc and in no circumstances to a General Meeting of the Branch It is also the duty of a Branch Council to consider ethic cases (a) on appeal from a decision of one of the Divisions c the Branch; (b) where a Division of the Branch is inactiv or is not in possession of the Ethical Rules; or (c) on reference from the Central Ethical Committee.

6. Where a complaint is lodged by a member of on Division against a member of another Division, the Division concerned being in different Branches, it has been customar for the Central Ethical Committee itself to deal with suc cases.

7. Where a complaint is made by a member of a Divisio against a practitioner who is not a member of the Association the matter may be considered in accordance with the procedur outlined in paras. 4 and 5 above, provided that the non-membe (who is of course not bound by the Ethical Rules of th Association) gives a signed undertaking beforehand to accep the decision of the Association. If, however, the non-membe does not wish to have the matter considered through th ethical machinery of the Association the matter is no proceeded with.

8. Where a complaint is made by a non-member of th Association against a member, the non-member concerned i informed that the Association is prepared to investigate th complaint made by him provided he is willing to give signed undertaking beforehand to accept the decision of th Association in the matter. It is the practice of the Centra *Ethical Committee itself to consider these cases.* If an under taking is not given the case is not considered by th Association.

9. It is customary to rule out of consideration any com plaints which hinge upon a legal issue, *e.g.*, the legal interpretation of a particular clause of an agreement between two practitioners, as it is considered that the Association is not competent to express an opinion upon legal points of this kind. If, however, the matter has a distinctly profes sional bearing, the Secretary of the Division is told that the complaint may be considered by the Ethical Committee of his Division from that particular angle. A recent example will illustrate the kind of case instanced. One practitioner complained that his former assistant and prospective partner had set up in practice in the area after it had been finally decided between the two that the partnership was not to materialise. There was unquestionably a legal issue involved, namely, whether or not the correspondence which had passed between the two practitioners, the verbal agreement, and indeed a draft agreement which had been prepared, did not in themselves constitute a promise by the principal of the practice to take into partnership his assistant. The Secretary of the Division was informed that this particular aspect of the case was a matter for the lawyers to decide but that it would be quite competent for the Ethical Committee of the Division to hear the case and to express an opinion upon the purely professional aspect of the case, it being recognised that a legal opinion upon the points raised might conflict with the professional opinion expressed by the Ethical Committee of the Division.

10. In cases where a decision has been given by a Division of the Association, a practitioner concerned feeling himself aggrieved at such decision has a right of appeal to the Branch Council and from the Branch Council to the Council of the

Association. But in any appeal against a decision of a Branch Council the grounds of the appeal are limited to the claim either:—

(a) that an ethical principle has been wrongly interpreted or applied; or

(b) that the decision given is against the weight of evidence.

In these appeals the Council of the Association has delegated its power to the Central Ethical Committee, and the decision of that Committee, when pronounced, is final.

11. It must be clearly understood, however, that the powers vested in the Central Ethical Committee in the preceding paragraph do not relate to the question of expulsion of members from the Association. Only the Council itself, under the Articles of Association has the power of expulsion.

12. If the parties to a dispute have given their written consent to accept as final the decision of the Ethical Committee, the Association has no power to enforce any such decision, although if one or other of the parties does not conform to the judgment of the Ethical Committee this itself may be a matter for consideration under the Ethical Rules. This would happen also if a decision of a Division itself in respect of an ethical dispute between practitioners which had been dealt with in conformity with the ethical machinery, was not carried out by one or other of the parties to a dispute.

Possible Developments.

13. In addition to the classes of cases referred to in paras. 4-9, disputes or differences of opinion arise where an accusation, even when sustained, may mean nothing more than an error of judgment in the interpretation of facts or in the application of a rule or custom to particular events. In such circumstances the Central Ethical Committee, provided that the practitioners concerned will sign an agreed statement of the facts, is prepared to give an authoritative opinion on the facts without any question of reflection or censure on either one side or the other. This is a class of case which is not at the moment frequently brought to the notice of the Association, and it is suggested that members of the Association might more readily avail themselves of this facility. The arrangement has several advantages:—

(a) It would lessen the personal feeling in the dispute and would emphasise the matter of principle, with a corresponding diminution of the risk of an open breach and permanent quarrel.

(b) It would promote the settlement of a disputed point without compelling a practitioner to frame a charge against his colleague and so to suggest that an unprofessional act had been deliberately committed.

(c) It would recognise the possibility of honest error of judgment and of mistakes due to defective information, and would provide the means of rectifying these without inflicting any reproach on any individual's good faith or professional reputation.

(d) It would enlarge the conciliatory function of the Association, for under it disputes might be settled which under the present practice never come to an issue because the practitioner, though believing himself to have a grievance, will not incur the trouble and responsibility of presenting a formal complaint.

(e) It would lessen expense because with an agreed written statement of facts the C.E.C. would usually be able to register an opinion without the personal attendance of the members concerned.

14. Cases arise on rare occasions which are outside the purview of the ordinary ethical machinery of the Association, and which can more suitably be dealt with by a Court of Arbitration under the Arbitration Acts. It has been found by experience that it would be difficult and undesirable for the Association to establish such Courts side by side with its ordinary ethical procedure

15. The Medico-Political Committee has for many years been in the habit of arbitrating informally in cases of disputes between medical men and their patients in regard to charges. It has always seemed to the Committee that some of the cases which find their way to the Courts could have been avoided if there had been some independent body to which both parties could submit their case before proceeding to extreme measures. Informal arbitration is carried out either by the Committee or by the Chairman on behalf of the Committee. Such arbitration can of course only be carried out when both parties agree to accept the decision of the arbitrator. No charge is made. Cases do not arise with any great frequency—only five cases have been dealt with since 1920—but it is quite possible that more cases would be submitted if it were generally known that such facilities existed. There is no reason why a similar method of dealing with such cases should not be adopted locally, the Executive Committee of a Division or Chairman of a Division on behalf of the Committee, acting informally as Arbitrator.

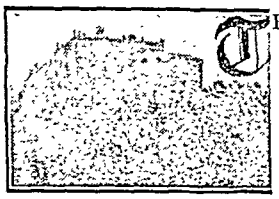
British Medical Association.

NINETY-FIFTH ANNUAL MEETING, EDINBURGH, JULY, 1927.

Patron: HIS MAJESTY THE KING.

President: R. G. HOGARTH, C.B.E., F.R.C.S., Senior Surgeon, General Hospital, Nottingham.



President-Elect: SIR ROBERT W. PHILIP, M.D., LL.D., F.R.C.P.Ed., Consulting Physician, Royal Infirmary, Edinburgh.

Chairman of Representative Body: H. B. BRACKENBURY, M.R.C.S., L.R.C.P.

Chairman of Council: SIR ROBERT BOLAM, M.D., LL.D., F.R.C.P.

Treasurer: N. BISHOP HARMAN, M.B., F.R.C.S.

PROVISIONAL PROGRAMME.

Edinburgh Castle.

THE incoming President, Sir ROBERT PHILIP, will deliver his Address to the Association on Tuesday, July 19th, at 8 p.m.

The ANNUAL REPRESENTATIVE MEETING will begin on Friday, July 15th, at 10 a.m., and be continued on the three following week-days. The Representatives' Dinner will take place at the University Union on Friday evening, July 15th, at 7.30 p.m.

The statutory ANNUAL GENERAL MEETING will be held on Tuesday, July 19th, at 2 p.m., and the adjourned general meeting at 8 p.m.

The Annual Dinner of the Association will take place on the evening of Thursday, July 21st, at 7.15 p.m.

The Conference of Honorary Secretaries will be held at 2.30 p.m. on Wednesday, July 20th, and the Secretaries' Dinner at 6.30 the same evening.

The official Religious Service will be held in St. Giles Cathedral on Tuesday, July 19th, at 4.30 p.m.

The Annual Exhibition of surgical appliances, foods, drugs, and books, to be held in the Waverley Market, Princes Street, Edinburgh, will be open for inspection on Monday, July 18th, from 2 till 6 p.m.; the formal opening by the President will take place on July 19th at 9.30 a.m. The exhibition will remain open on July 20th, 21st, and 22nd from 9 a.m. to 6 p.m.

The University of Edinburgh will give a Reception within the Old Quadrangle on Wednesday, July 20th, at 4.15 p.m. This will follow an Honorary Graduation in the McEwan Hall, which will take place at 3 p.m.

A Centenary Celebration commemorative of the birth of Lord Lister, presided over by the Earl of Balfour, K.G., will take place on the evening of Wednesday, July 20th, at 8 o'clock, in the McEwan Hall, when short addresses will be given by Sir W. Watson Cheyne, Bt., Professor Tuffier of Paris, Professor Harvey Cushing of Harvard University, and Dr. James Stewart of Halifax, Nova Scotia. During the week of the Annual Meeting a museum containing relics of Lister's life and work will be displayed in the Upper Library of the Old University. A *Lister Memorial Volume* has been prepared, and a copy will be given to each member of the Association who registers in the Reception Room.

On Saturday, July 23rd, there will be an excursion to Fife and St. Andrews.

THE SECTIONS.

The Scientific Sections will meet from 10 a.m. to 1 p.m. for papers and discussions on Wednesday, Thursday, and Friday, July 20th, 21st, and 22nd.

The following Sections will meet on Three Days.

MEDICINE.

President: Professor G. LOVELL GULLAND, C.M.G., M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: Professor J. HILL ABRAM, M.D., F.R.C.P. (Liverpool); R. A. FLEMING, M.D., F.R.C.P.Ed. (Edinburgh); H. MORLEY FLETCHER, M.D., F.R.C.P. (London); W. T. RITCHIE, O.B.E., M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: GEORGE GRAHAM, M.D., F.R.C.P., 1, Devonshire Place, London, W.1; G. D. MATHEWSON, M.B., F.R.C.P.Ed., 28A, Moray Place, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Results of Insulin Therapy in Diabetes Mellitus. To be opened by Professor HUGH MACLEAN (London), followed by Dr. GEORGE GRAHAM (London) and Professor D. MURRAY LYON (Edinburgh).

Thursday, July 21st.—Discussion: The Treatment of Acute Lobar Pneumonia. To be opened by Professor JOHN HAY (Liverpool), followed by Dr. H. MORLEY FLETCHER (London) and Dr. A. FERGUS HEWAT (Edinburgh).

Friday, July 22nd.—Discussion: The Pathology and Treatment of Pernicious Anaemia. To be opened by Professor G. LOVELL GULLAND (Edinburgh), followed by Dr. ARTHUR F. HURST (Ascot).

SURGERY.

President: Professor D. P. D. WILKIE, O.B.E., M.D., Ch.M., F.R.C.S. (Edinburgh).

Vice-Presidents: J. W. DOWDEN, C.M., F
F. J. STEWARD, M.S., F.R.C.S. (Londo
F.R.C.S.Ed. (Edinburgh); H. WADE, C.M.G., D.S.O., F.R.C.S.Ed. (Edinburgh); A. M. WEBBER, M.S., F.R.C.S. (Nottingham).

Honorary Secretaries: J. M. GRAHAM, Ch.M., F.R.C.S.Ed., 8, Manor Place, Edinburgh; E. C. HUGHES, O.B.E., M.Ch., F.R.C.S., 17, Wimpole Street, London, W.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Tuberculosis of the Kidney. To be opened by Sir JOHN THOMSON-WALKER (London), followed by Dr. ROLLIER (*Leysin*), Professor A. FULLERTON (*Belfast*), Mr. HENRY WADE (Edinburgh), Mr. J. F. DOBSON (Leeds), and Mr. BERNARD J. WARD (Birmingham).

Paper: Mr. W. RANKIN (Glasgow), The Treatment of Acute Osteomyelitis by Primary Diaphysectomy.

Thursday, July 21st.—Discussion: The Place of Surgery in the Treatment of Toxic Goitre. To be opened by Mr. T. P. DUNHILL (London), followed by Professor G. R. MURRAY (Manchester), Mr. C. THURSTAN HOLLAND (Liverpool), Professor R. E. KELLY (Liverpool), and Dr. JOHN EASON (Edinburgh).

Paper: Sir ALMROTH E. WRIGHT (London), The Rational Treatment of Infected Wounds.

Friday, July 22nd.—Discussion: Chronic Appendicitis. To be opened by Mr. WILFRED TROTTER (London), followed by Mr. J. W. DOWDEN (Edinburgh), Mr. VICTOR BONNEY (London), Mr. A. J. WALTON (London), and Mr. HERBERT J. PATERSON (London).

Paper: Mr. A. MACLENNAN (Glasgow), Burns.

OBSTETRICS AND GYNAECOLOGY.

President: JAMES HAIG FERGUSON, M.D., C.M., F.R.C.P.Ed., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: T. WATTS EDEN, M.D., F.R.C.P., F.R.C.S.Ed. (London); GIBBON FITZGIBBON, M.D., F.R.C.P.I. (Dublin); WILLIAM FORDYCE, M.D., F.R.C.P.Ed. (Edinburgh); Professor R. W. JOHNSTONE, C.B.E., M.D., F.R.C.S.Ed. (Edinburgh); Mrs. ETHEL VAUGHAN-SAWYER, M.D. (London).

Honoraries Secretaries: DANIEL DOUGAL, *M.C.*, M.D., 11, St. John Street, Manchester; W. F. T. HAULTAIN, O.B.E., *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 6, Walker Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Relation of Pregnancy to General Diseases. To be opened by Professor J. M. MUNRO KERR (Glasgow) Cardiac Diseases, Dr. E. RIST (Paris) Tuberculosis, and Professor F. J. BROWNE (London) Venereal Diseases, followed by Dr. G. FITZGIBBON (Dublin) and Dr. MARY H. J. MACNICOL (Edinburgh).

Thursday, July 21st.—Discussion: The Hygiene of Menstruation in Adolescents. To be opened by Professor R. W. JOHNSTONE (Edinburgh), Dr. J. HUNTER P. PATON (St. Andrews), and Mrs. A. E. SANDERSON CLOW (Cheltenham), followed by Mrs. E. VAUGHAN-SAWYER (London).

Friday, July 22nd.—Papers: Dr. F. A. E. CREW (Edinburgh), The Effect upon the Sex Ratio of Conception Early and Late in Relation to the Oestrous Cycle of the Rat: Dr. DOUGLAS A. MILLER (Edinburgh), Failed Forceps Cases; Dr. DANIEL DOUGAL (Manchester), The Clinical Features of Ectopic Pregnancy; Dr. BETHEL SOLOMONS (Dublin), Some Points in the Technique of the Low Segment Caesarean Operation; Professor W. FLETCHER SHAW (Manchester), Uterine Fibroids after the Menopause.

PATHOLOGY AND BACTERIOLOGY.

President: Professor J. LORRAIN SMITH, M.D., F.R.S., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: J. W. DAWSON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); W. R. LOGAN, M.D., F.R.C.P.Ed. (Edinburgh); Professor T. J. MACKIE, M.D., D.P.H. (Edinburgh); H. D. WRIGHT, M.D., M.R.C.P.Ed. (London).

Honorary Secretaries: JAMES DAVIDSON, M.B., Ch.B., Pathological Department, University of Edinburgh; H. J. PARISH, M.D., M.R.C.P.Ed., D.P.H., Wellcome Physiological Research Laboratories, Langley Court, Beckenham, Kent.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Growth in Its Pathological Relations. To be opened by Dr. ARCHIBALD LEITCH (London), followed by Professor R. MUIR (Glasgow), Dr. G. W. DE P. NICHOLSON (London), Professor J. SHAW DUNN (Manchester), Professor M. J. STEWART (Leeds), and Professor E. H. KETTLE (Cardiff).

Thursday, July 21st.—(Joint meeting with Section of Comparative Medicine). Discussion: Immunity. To be opened by Dr. R. A. O'BRIEN (Beckenham) and Professor CARL H. BROWNING [Glas[illegible] MUIR (Glasgow), Dr. HED[illegible].F. HARVEY (Edinburgh), and [illegible]

[illegible] Joint meeting with Section of Comparative [illegible] Aspects and Problems of Comparative [illegible] by Professor BASIL BUXTON (Cambridge), followed by Major G. W. DUNKIN (London), Mr. W. H. ANDREWS (Ministry of [illegible] A. E. CREW (Edinburgh), Dr. H. H. SCOTT [illegible] R. T. LEIPER (London), Mr. J. W. BRITTL[illegible] London), Mr. ARTHUR GOTTEN (Edinburgh), Mr. T. W. M. CAMERON (London), and Mr. JAMES MCALLAN (Aberdeen).

THERAPEUTICS AND PHARMACOLOGY.

President: Professor J. A. GUNN, M.D., D.Sc. (Oxford).

Vice-Presidents: Professor A. J. CLARK, *M.C.*, M.D., F.R.C.P. (Edinburgh); Professor FRANCIS R. FRASER, M.D., F.R.C.P. (London); E. P. POULTON, M.D., F.R.C.P. (London).

Honorary Secretaries: E. G. HOLMES, M.B., B.Chir., Pharmacological Laboratory, Cambridge; C. G. LAMBIE, *M.C.*, M.B., F.R.C.P.Ed., 31, Drumsheugh Gardens, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. to 12 noon. Discussion: Clinical Methods of Administration and Therapeutic Uses of Oxygen. To be opened by Dr. E. P. POULTON [illegible] H. WHITRIDGE DAVIES (Leeds) and Dr. [illegible]. 12 noon to 1 p.m. Paper: Profess[illegible] Expectorants.

Thursday, July 21st.—Discussion: The Therapeutic Uses of Calcium Salts. To be opened by Professor F. R. FRASER (London), followed by Dr. L. G. PARSONS (Birmingham), Mr. C. P. STEWART (Edinburgh) Biochemical Aspect, Dr. G. H. PERCIVAL (Edinburgh) Pharmacological and Therapeutic Aspect, Professor L. BLUM (Strasbourg), Dr. G. C. LINDER (London) Tetany, and Dr. N. F. C. BURGESS (London).

Friday, July 22nd.—Discussion: The Action and Uses of Ovarian Extracts. To be opened by Professor W. E. DIXON (Cambridge), followed by Dr. KATHERINE A. COWARD (London) Standardization, Mr. A. S. PARKES (London) Physiological, Dr. W. R. ADDIS (Manchester) Clinical, and Professor J. M. MUNRO KERR (Glasgow) Gynaecological.

DISEASES OF CHILDREN.

President: Professor JOHN FRASER, *M.C.*, M.D., Ch.M., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: H. CHARLES CAMERON, M.D., F.R.C.P. (London); ALEXANDER DINGWALL FORDYCE, M.D., F.R.C.P.Ed. (Liverpool); CHARLES MCNEIL, M.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: Miss HELEN M. M. MACKAY, M.D., 28, John Street, Bedford Row, London, W.C.1; LEWIS THATCHER, M.D., F.R.C.P.Ed., 8, Melville Crescent, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Acute Pneumonia in Early Childhood. To be opened by Dr. CHARLES MCNEIL (Edinburgh) and Dr. AGNES R. MACGREGOR (Edinburgh) conjointly, followed by Professor LEONARD FINDLAY (Glasgow), Dr. J. HUGH THURSFIELD (London), Colonel W. GLEN LISTON (Edinburgh), and Dr. NORMAN S. CARMICHAEL (Edinburgh).

Afternoon.—Demonstration: Dr. W. A. ALEXANDER (Edinburgh), Acute Pulmonary Conditions in Childhood, illustrated by specimens, *x*-ray prints, large sections, and microscopic preparations.

Surgical Demonstration at Royal Edinburgh Hospital for Sick Children.

Thursday, July 21st.—Discussion: Acute Intestinal Obstruction in Infancy and Childhood. To be opened by Mr. ALEX. MACLENNAN (Glasgow), followed by Mr. L. E. BARRINGTON-WARD (London), Miss G. M. A. HERZFELD (Edinburgh), Mr. F. C. PYBUS (Newcastle-on-Tyne), and Mr. NORMAN M. DOTT (Edinburgh).

Afternoon.—[illegible] Medical Cases at Royal Edinburgh Hosp[illegible]

Fr[illegible]: Therapeutic Modification of the Diet in Infancy: what can be achieved by it? To be opened by Dr. H. C. CAMERON (London), followed by Dr. A. DINGWALL FORDYCE (Liverpool), Dr. G. B. FLEMING (Glasgow), and Dr. LEWIS THATCHER (Edinburgh).

MENTAL DISEASES.

President: Professor GEORGE M. ROBERTSON, M.D., P.R.C.P.Ed. (Edinburgh).

Vice-Presidents: BERNARD HART, M.D., F.R.C.P. (London); JOHN KEAY, C.B.E., M.D., F.R.C.P.Ed. (Bangour); J. R. LORD, C.B.E., M.D., F.R.C.P.Ed. (Epsom); H. C. MARR, M.D., F.R.F.P.S.Glas. (Edinburgh).

Honorary Secretaries: R. D. GILLESPIE, M.D., 152, Harley Street, London, W.1; W. M. MCALISTER, M.B., Ch.B., M.R.C.P.Ed., 151, Morningside Drive, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Chronic Sepsis as a Cause of Mental Disorder. To be opened by Dr. WILLIAM HUNTER, C.B. (London), followed by Sir BERKELEY MOYNIHAN, K.C.M.G., C.B. (Leeds), Dr. D. CHALMERS WATSON (Edinburgh), Dr. E. GOODALL (Whitchurch), Dr. C. H. BOND (Brighton), and Dr. W. F. MENZIES (Cheddleton).

Thursday, July 21st.—Joint meeting with the Section of Neurology. Discussion: Epidemic Encephalitis. To be opened by Dr. IVY MACKENZIE (Glasgow), Epidemiological Considerations; Dr. J. GODWIN GREENFIELD (London), Pathology; Dr. R. M. MARSHALL (Glasgow), Mental Aspects; and Dr. G. RIDDOCH (London), Chronic Encephalitis; followed by Dr. E. MAPOTHER (London), Dr. H. DEVINE (Virginia Water), Dr. W. J. ADIE (London), and Dr. W. A. POTTS (Birmingham).

Friday, July 22nd.—Discussion: Points in the Lunacy Commission (England) Report—(*a*) Are the existing safeguards against wrongful detention adequate? (*b*) How far is judicial intervention necessary in the process of certification? (*c*) What additional facilities are required for early treatment? To be opened by Professor GEORGE M. ROBERTSON (Edinburgh).

The following Sections will meet on Two Days.

NEUROLOGY.

President: Professor EDWIN BRAMWELL, M.D., F.R.C.P. (Edinburgh).

Vice-Presidents: ALEX. NINIAN BRUCE, M.D., D.Sc., F.R.C.P.Ed. [illegible] GREENFIELD, M.D., F.R.C.P. (London); [illegible].E., M.D., D.Sc., F.R.C.P. (London). [illegible] E. A. CARMICHAEL, M.B., Ch.B., F.R.C.P.Ed., [illegible]een Square, London, W.C.1; NORMAN M. DOTT, M.B., F.R.C.S.Ed., 8, Grosvenor Crescent, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: The Tics and Allied Conditions. To be opened by Dr. S. A. KINNIER WILSON (London), followed by Professor GUILLAIN (Paris), Dr. A. F. HURST (Ascot), Dr. A. STANLEY BARNES (Birmingham), Dr. T. GRAINGER STEWART (London), Dr. DONALD E. CORE (Manchester), Dr. R. G. GORDON (Bath), and Dr. W. J. ADIE (London).

Thursday, July 21st.—Joint meeting with Section of Mental Diseases. Discussion: Epidemic Encephalitis. To be opened by Dr. IVY MACKENZIE (Glasgow), Epidemiological Considerations; Dr. J. GODWIN GREENFIELD (London), Pathology; Dr. R. M. MARSHALL (Glasgow), Mental Aspects; and Dr. G. RIDDOCH (London), Chronic [illegible] Dr. E. MAPOTHER (London), Dr. H. [illegible], Dr. W. J. ADIE (London), and Dr. [illegible].

OPHTHALMOLOGY.

President: A. H. H. SINCLAIR, M.D., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: WILFRED ALLPORT, M.B., F.R.C.S.Ed. (Birmingham); Sir ARNOLD LAWSON, K.B.E., F.R.C.S. (London); H. M. TRAQUAIR, M.D., F.R.C.S.Ed. (Edinburgh).

Honorary Secretaries: R. E. BICKERTON, D.S.O., M.B., Ch.B., 33, Portland Place, London, W.1; E. H. CAMERON, M.B., Ch.B., F.R.C.S.Ed., 7, Darnaway Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. Discussion: Optic Neuritis. To be opened by Dr. J. V. PATERSON (Edinburgh), followed by Dr. HENNING RÖNNE (Copenhagen) and Dr. A. J. BALLANTYNE (Glasgow).

Thursday, July 21st.—10 a.m. Papers: Miss I. C. MANN (London), Some Aspects of the Comparative Development of the Retina; Sir W. T. LISTER (London), Some Points in Connexion with Detachment of the Retina; Mr. W. CLARK SOUTER (Aberdeen), Spontaneous Reattachment of Detached Retina; Sir ARNOLD LAWSON (London), Value of Antiseptics in Modern Ophthalmic Surgery; Mr. F. HOLT DIGGLE (Manchester), Relationship between Lacrymal Obstruction and Nasal Disease; Mr. H. M. TRAQUAIR (Edinburgh), Incidence of Tobacco Amblyopia in Edinburgh and District; Mr. A. H. H. SINCLAIR (Edinburgh), Remarks on Intracapsular Extraction of Cataract, and Demonstration.

LARYNGOLOGY AND OTOLOGY.

President: A. LOGAN TURNER, M.D., P.R.C.S.Ed. (Edinburgh).

Vice-Presidents: J. S. FRASER, M.B., F.R.C.S.Ed. (Edinburgh); W. M. MOLLISON, C.B.E., M.Chir., F.R.C.S. (London); DONALD R. PATERSON, M.D.Ed., F.R.C.P. (Cardiff).

Honorary Secretaries: A. R. DINGLEY, F.R.C.S., 47, Queen Anne Street, London, W.1; W. T. GARDINER, *M.C.*, M.B., Ch.B., F.R.C.S.Ed., 18, Chester Street, Edinburgh.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussion: Neurological and Mechanical Factors underlying Immobility of the Vocal Cords; their diagnosis, [illegible] and principles of treatment. It will be opened by Dr. [illegible] ogical aspect, and Mr. HERBERT

Thursday, July 21st.—Discussion: Otosclerosis. To be opened by Mr. G. J. JENKINS (London), followed by Professor F. R. NAGER (Zurich) and Dr. A. A. GRAY (Glasgow). The discussion will be illustrated by microscopical sections showing the changes in the ear in otosclerosis.

Papers: Mr. NORMAN PATTERSON (London), Some Diseases Affecting the Thyro-glossal Tract; Dr. STEPHEN YOUNG (Glasgow), Radiography in Mastoid Disease.

PREVENTIVE MEDICINE.

President: Professor P. S. LELEAN, C.B., C.M.G., F.R.C.S., D.P.H. (Edinburgh).

Vice-Presidents: G. F. BUCHAN, M.D., D.P.H. (London); Miss HARRIETTE CHICK, D.Sc. (London); A. M. HEWAT, M.D., D.P.H. (London); G. R. LEIGHTON, O.B.E., M.D., D.Sc. (Edinburgh).

Honorary Secretaries: W. T. BENSON, B.Sc., M.D., D.P.H., M.R.C.P.Ed., City Hospital, Comiston Road, Edinburgh; C. W. HUTT, M.D., D.P.H., Council Offices, 197, High Holborn, London, W.C.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 a.m. Discussion: Should all Public Health Administration—Municipal, School, Factory, etc.—be Concentrated under a Single Department, and the Immediate Control in Each Executive Area be Vested in a Single Individual? To be opened by Dr. A. S. M. MACGREGOR (M.O.H. Glasgow), followed by Dr. F. E. WYNNE (Sheffield), Dr. J. H. MEIKLE (Medical Officer, Edinburgh School Board), Professor E. L. COLLIS (Cardiff), and Dr. E. W. HOPE (Liverpool).

3 to 4 p.m. Demonstration at City Hospital, Comiston Road, Edinburgh, on The Schick and Dick Tests, and Methods of [illegible] phtheria and Scarlet Fever.

[illegible]0 a.m. Discussion: What Duties has [illegible] the Nation's Food Supply regarding Research, Instruction of Parents, Maintenance of Supplies, and Cooking Facilities? To be opened by Professor EDWARD MELLANBY (Sheffield), followed by Dr. EUSTACE HILL (M.O.H. County of Durham), Dr. J. P. KINLOCH (M.O.H. Aberdeen), and Mr. G. BENZIE (Motherwell).

12 noon. Paper: Pulmonary Asbestosis (with lantern slides), by Dr. W. E. COOKE (Wigan), Sir THOMAS OLIVER (Newcastle-on-Tyne), and Professor STUART MCDONALD (Newcastle-on-Tyne).

2 to 4 p.m. Demonstration: Exhibits in the Museum at the Usher Institute of Public Health, with a special demonstration on food viewed from the popular standpoint.

PHYSIOLOGY AND BIOCHEMISTRY.

President: Professor Sir EDWARD SHARPEY-SCHAFER, M.D., LL.D., D.Sc., F.R.S. (Edinburgh).

Vice-Presidents: Professor P. T. HERRING, M.D., F.R.C.P.Ed. (St. Andrews); Professor D. MURRAY LYON, M.D., D.Sc., F.R.C.P.Ed. (Edinburgh); Professor JOHN MELLANBY, M.D. (London); Professor T. H. MILROY, M.D. (Belfast); Professor JOHN TAIT, M.D., D.Sc. (Montreal).

Honorary Secretaries: Professor B. A. MCSWINEY, M.B., B.Ch., School of Medicine, Leeds; Miss MAY LAURIE WALKER, B.Sc., M.B., Ch.B., Department of Physiology, University of Edinburgh.

The following provisional programme has been arranged

Thursday, July 21st.—Morning session. Discussion: The Structure and Function of the Spleen. To be opened by Professor JOHN TAIT (Montreal), followed by Professor J. BARCROFT, F.R.S. (Cambridge), and others. Papers: Professor P. T. HERRING (St. Andrews), The Pineal Gland; Professor D. MURRAY LYON and Mr. W. ROBSON, D.Sc. (Edinburgh), Cystinuria; Dr. J. CRIGHTON BRAMWELL (Manchester), Form of the Pulse Wave; Professor J. A. MACWILLIAM (Aberdeen) and Professor G. SPENCER MELVIN (Kingston, Canada), Optimal Rhythm in the Mammalian Heart and the Action of the Cardiac Nerves; Dr. C. REID (Aberdeen), The Mechanism of Voluntary Muscular Fatigue; Professor H. E. ROAF (London), The Quantitative Measurement of Defects in Colour Vision; Professor B. A. MCSWINEY (Leeds), Structure and Movements of the Cardia.

Afternoon session. Discussion: The Influence of Internal Secretions on Sex Characters. To be opened by Dr. F. A. E. CREW (Edinburgh), followed by Mr. A. S. PARKES, D.Sc. (London), Professor E. E. GLYNN (Liverpool), and others.

Friday, [illegible]ssion. Discussion: Chemical Changes [illegible] Activity. To be opened by Professor [illegible] followed by Sir F. GOWLAND HOPKINS (Cambridge), Professors O. MEYERHOF (Berlin) and G. EMBDEN (Frankfurt). Papers: Professor J. MELLANBY (London), Bile as the Alimentary Stimulus for Pancreatic Secretion; Professor J. TAIT (Montreal), Natural Arrest of Haemorrhage from a Wound—illustrated with lantern slides; Dr. H. WHITRIDGE DAVIES (Leeds) and Professor B. A. MCSWINEY (Leeds), Circulation Rate; Professor R. J. S. MCDOWALL (London), Physiological Considerations in High Blood Pressure; Dr. C. R. HARINGTON, Ph.D. (London), The Constitution of Thyroxin.

Afternoon session. Discussion: Haemolysis. To be opened by Dr. ERIC H. PONDER (Edinburgh), followed by Professor J. MELLANBY, Dr. R. BRINKMAN (Groningen), and others.

COMPARATIVE MEDICINE.

President: Principal O. CHARNOCK BRADLEY, M.D., D.Sc., F.R.C.V.S. (Edinburgh).

Vice-Presidents: Professor J. B. BUXTON, M.A., F.R.C.V.S. (Cambridge); F. A. E. CREW, M.D., D.Sc. (Edinburgh); Major G. W. DUNKIN, M.R.C.V.S. (London).

Honorary Secretaries: T. W. M. CAMERON, Ph.D., B.Sc., M.R.C.V.S., London School of Hygiene and Tropical Medicine, 25, Endsleigh Gardens, London, W.C.1; J. RUSSELL GRIEG, M.R.C.V.S., Royal (Dick) Veterinary College, Edinburgh.

The following provisional programme has been arranged:

Thursday, July 21st.—(Joint meeting with Section of Pathology and Bacteriology). Discussion: Immunity. To be opened by Dr. R. A. O'BRIEN (Beckenham) and Professor CARL H. BROWNING (Glasgow), followed by Professor R. MUIR (Glasgow), Dr. HEDLEY D. WRIGHT (London), Colonel W. F. HARVEY (Edinburgh), and Professor T. J. MACKIE (Edinburgh).

Friday, July 22nd.—(Joint meeting with Section of Pathology and Bacteriology). Discussion: Aspects and Problems of Comparative Medicine. To be opened by Professor BASIL BUXTON (Cambridge), followed by Major G. W. DUNKIN (London), Dr. W. H. ANDREWS (Ministry of Agriculture), Dr. F. A. E. CREW (Edinburgh), Dr. H. H. SCOTT (London), Professor LEIPER (London), Mr. J. W. BRITTLEBANK (London), Mr. ARTHUR GOFTEN (Edinburgh), Mr. T. W. M. CAMERON (London), and Mr. JAMES MCALLAN (Aberdeen).

The following Sections will meet on One Day.

DERMATOLOGY.

President: ROBERT CRANSTON LOW, M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: W. HERBERT BROWN, M.D. (Glasgow); H. D. HALDIN-DAVIS, M.D., F.R.C.S. (London).

Honorary Secretaries: ROBERT AITKEN, M.D., F.R.C.P.Ed., 8, Palmerston Place, Edinburgh; F. D. HOWITT, M.D., 87, Harley Street, London, W.1.

The following provisional programme has been arranged:

Thursday, July 21st.—Discussion: The Uses and Limitations of Ultra-violet Radiations in Dermatology. To be opened by Dr. S. E. DORE (London).

Papers: Dr. H. C. G. SEMON (London), The Value of Kry-olgan in Lupus Erythematosus; Dr. G. B. DOWLING (London), The Treatment of Tinea Capitis with Thallium Acetate.

TROPICAL DISEASES.

President: ANDREW BALFOUR, C.B., C.M.G., M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: Lieut.-Colonel E. D. W. GREIG, C.I.E., M.D., D.Sc., F.R.C.P.Ed. [illegible] lonel W. F. HARVEY, C.I.E., M.D., C.M. Lieut.-Colonel W. GLEN LISTON, C.I.E., [illegible] C.P.Ed. (Edinburgh); Lieut.-Colonel W. P. MACARTHUR, D.S.O., O.B.E., M.D., F.R.C.P.I., D.P.H. (London).

Honorary Secretaries: A. R. D. ADAMS, M.B., Ch.B., D.T.M., School of Tropical Medicine, University of Liverpool; J. F. C. HASLAM, *M.C.*, M.B., M.R.C.P.Ed., D.P.H., Bureau of Hygiene and Tropical Diseases, 23, Endsleigh Gardens, London, W.C.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—10 to 11 a.m. Discussions: (1) Amoebic Dysentery. To be opened by Professor WARRINGTON YORKE (Liverpool), followed by Dr. P. H. MANSON-BAHR (London), (Treatment and Epidiascopic Illustrations of Sigmoidoscope Appearances) Dr. J. GORDON THOMSON (London), and Dr. N. SWELLENGREBEL (Amsterdam).

11 a.m. to 1 p.m. (2) Some Problems of Malaria Prophylaxis. To be opened by Lieut.-Colonel S. P. JAMES (Ministry of Health), followed by Sir WILLIAM T. PROUT, C.M.G., O.B.E. (London), Lieut.-Colonel E. D. W. GREIG, C.I.E. (Edinburgh), Dr. L. W. HACKETT (Rome), and Dr. N. SWELLENGREBEL (Amsterdam).

Afternoon. Museum Demonstration. Professor W. YORKE and Dr. A. R. D. ADAMS, Amoebic Dysentery. There will also be a demonstration of material lent by Professor W. S. PATTON (Liverpool).

FORENSIC MEDICINE.

President: Professor H. HARVEY LITTLEJOHN, M.B., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: The Right Hon. Earl RUSSELL (London); Sir WALTER SCHRODER, K.B.E. (London); Professor SYDNEY A. SMITH, M.D., D.P.H. (Cairo).

Honorary Secretaries: D. J. A. KERR, M.B., Ch.B., D.P.H., M.R.C.P.Ed., Forensic Medicine Department, University, Teviot Place, Edinburgh; Professor J. E. W. MCFALL, M.D., D.P.H., 15, Green Lane, Stoneycroft, Liverpool.

The following provisional programme has been arranged:

Thursday, July 21st.—Discussions: (1) Alcohol and the Motorist. To be opened by Dr. G. CARTER (Sheffield). (2) The Teaching of Forensic Medicine. To be opened by Professor J. GLAISTER (Glasgow).

Demonstrations: In connexion with the Section arrangements are being made for a demonstration of the museum of the Forensic Medicine Department, Edinburgh University, and of subjects of special medico-legal interest.

TUBERCULOSIS.

President: S. VERE PEARSON, M.D. (Mundesley).

Vice-Presidents: WILLIAM BRAND, M.B., C.M. (London); A. DE W. SNOWDEN, M.D., C.B.E. (Ringwood, Hants); ERNEST WATT, M.D., D.Sc., M.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: J. C. SIMPSON, *M.C.*, M.B., Ch.B., D.P.H., Southfield Sanatorium Colony, Liberton, Edinburgh; R. R. TRAIL, *M.C.*, M.D., King Edward VII Sanatorium, Midhurst.

The following provisional programme has been arranged:

Friday, July 22nd.—10 a.m. Discussions: (1) Radiology and Diagnosis of Intrathoracic Tuberculosis from the Point of View of Specialist and Practitioner. To be opened by Mr. H. MORRISTON DAVIES (Vale of Clwyd Sanatorium, North Wales), followed by Dr. E. RIST (Paris), Dr. J. LOGAN STEWART (Manchester), and Dr. J. M. WOODBURN MORISON (Edinburgh). (2) Pathology of the

Tuberculosis of Childhood and Its Bearing on Clinical Work. To be opened by Professor EUGENE L. OPIE (Washington University), followed by Dr. R. G. [illegible]; Dr. P. F. ARMAND-DELILLE (Paris). (3) [illegible] and Surgeon in Regard to Non-pulmo[illegible] o opened by Dr. D. A. POWELL (Cardiff) and Professor JOHN FRASER (Edinburgh), followed by Dr. G. H. GIBBLESTONE (Oxford).

2.30 p.m. Demonstrations, *x* rays, etc.

VENEREAL DISEASES.

President: DAVID LEES, D.S.O., M.B., F.R.C.S.Ed. (Edinburgh).

Vice-Presidents: ARCHIBALD CAMBELL, M.B., Ch.B. (Portsmouth); Mrs. MARGARET ROBKE, M.B., Ch.B. (London); R. STOPFORD TAYLOR, D.S.O., M.B., F.R.C.S.Ed. (Liverpool).

Honorary Secretaries: F. C. DOBLE, M.R.C.S., L.R.C.P., 93A, Harley Street, London, W.1; Miss MARY FORBES LISTON, M.B., Ch.B., 33, Comely Bank, Edinburgh.

The following provisional programme has been arranged:

Friday, July 22nd.—Morning session. Discussion: The Value of Routine Examination of the Cerebro-spinal Fluid with regard to (*a*) More Accurate Knowledge, (*b*) Prognosis, (*c*) Treatment. To be opened by Mr. C. H. MILLS (London). Clinical cases illustrating types of neuro-syphilis will also be shown.

Afternoon session. Discussions: (1) The Employment of certain Constituents of the Gonococcus in Treatment and of other Constituents in Tests of Cure. To be opened by Major E. C. LAMBKIN, D.S.O., R.A.M.C.; (2) The Place of Bismuth in the Treatment of Syphilis, by Mr. DAVID LEES, D.S.O.

RADIOLOGY.

President: J. M. WOODBURN MORISON, M.D., C.M., D.M.R.E. (Edinburgh).

Vice-Presidents: M. R. J. HAYES, F.R.C.S.I. (Dublin); ROBERT E. ROBERTS, M.D., B.Sc., D.M.R. and E. (Liverpool).

Honorary Secretaries: W. CRICHTON FOTHERGILL, M.B., Ch.B., D.M.R.E., 5, Hermitage Drive, Edinburgh; JOHN MUIR, O.B.E., M.B., B.Ch., British Institute of Radiology, 32, Welbeck Street, London, W.1.

The following provisional programme has been arranged:

Wednesday, July 20th.—Discussions: (1) 10 a.m. *X* Rays in the Diagnosis of Intrathoracic Growth. To be opened by Dr. STANLEY MELVILLE (London), followed by Mr. C. THURSTAN HOLLAND (Liverpool), Dr. A. FERGUS HEWAT (Edinburgh), and Dr. D. CAMPBELL SUTTIE (Glasgow). (2) 11.30 a.m. *X* Rays and Radium in the Treatment of Carcinoma of the Breast. To be opened by Dr. N. S. FINZI (London), followed by Dr. J. H. D. WEBSTER (London), Dr. A. E. BARCLAY (Manchester), Dr. M. R. J. HAYES (Dublin), and Dr. R. KNOX (London).

HISTORY OF MEDICINE.

President: JOHN D. COMRIE, B.Sc., M.D., F.R.C.P.Ed. (Edinburgh).

Vice-Presidents: ARNOLD CHAPLIN, M.D., F.R.C.P. (London); CHARLES SINGER, M.D., D.Litt., F.R.C.P. (London); R. W. INNES SMITH, M.D. (Sheffield); HENRY S. WELLCOME (Beckenham).

Honorary Secretaries: WALTER J. DILLING, M.B., Ch.B., Kareol, Mines Avenue, Aigburth, Liverpool; ADAM CAIRNS WHITE, M.B., Ch.B.Ed., Pharmacological Department, University of Edinburgh.

The following provisional programme has been arranged:

Friday, July 22nd.—10 a.m. Discussion: The Historic Evolution of Disease. To be opened by Sir HUMPHRY ROLLESTON, Bt. (Cambridge), followed by Professor GRAFTON ELLIOT SMITH (London) Ancient Prototypes of Modern Disease, Dr. G. MATHESON CULLEN (Edinburgh) World Epidemics and their Relationship in Cause and Effect to Social Conditions, and Miss M. C. BUER (Reading) The Effect of Early Industrialism upon the Health of the Community.

Papers: 12.15 p.m. Professor A. J. CLARK (Edinburgh), The Historical Aspect of Quackery. 12.30 p.m., Professor W. J. DILLING (Liverpool), The Methods of Introduction of Drugs.

Demonstrations: (1) Dr. ARNOLD CHAPLIN (London), Portraits of Old Physicians; (2) Mr. G. H. EDINGTON (Glasgow), The Practice of Surgery in the Early 17th Century, as illustrated in the Writings of Maister Peter Lowe.

MEDICAL SOCIOLOGY.

President: F. N. KAY MENZIES, M.D., F.R.C.P.Ed., D.P.H. (London).

Vice-Presidents: L. D. CRUICKSHANK, M.D., M.R.C.P.Ed., D.P.H. (Edinburgh); Sir HENRY S. KEITH, J.P. (Hamilton); the Hon. Lord MACKENZIE, LL.D. (Edinburgh); the Hon. Sir ARTHUR STANLEY, G.B.E., C.B., LL.D., Hon. F.R.C.P.Ed. (London); Sir NORMAN WALKER, M.D., LL.D., F.R.C.P.Ed. (Edinburgh).

Honorary Secretaries: T. YULE FINLAY, M.D., M.R.C.P.Ed., 9, Hermitage Gardens, Edinburgh; B. S. SIMMONDS, M.S., F.R.C.S., 124, Harley Street, London, W.1.

The following provisional programme has been arranged:

Friday, July 22nd.—Discussion: The Future Relationship of Municipalities to the Voluntary Hospitals of this Country. To be opened by Mr. H. L. EASON (London) and Mr. M. A. REYNARD (Glasgow Parish Council), followed by Sir HENRY KEITH, Sir ARTHUR STANLEY, and others.

The Honorary Local General Secretary of the Annual Meeting is A. FERGUS HEWAT, M.D., F.R.C.P.Ed., 14, Chester Street, Edinburgh.

PROVISIONAL TIME-TABLE.

FRIDAY, JULY 15TH.

10.0 a.m.—*Representative Meeting*, McEwan Hall, University New Buildings.
11.0 a.m.—Civic Welcome to Representative Body.
1.0 p.m.—Luncheon to Overseas Representatives, University
7.30: [illegible] ty Union.
7.30 [illegible] ance, Ladies' Social Club, Assembly Rooms, 54, George Street.

SATURDAY, JULY 16TH.

9.30 a.m.—*Representative Meeting.*
1.0 p.m.—Official Photograph, University New Buildings.
8.30 p.m.—*Smoking Concert* (Representatives), *University Union.*
8.30 p.m.—"At Home" at Ladies' Social Club.

SUNDAY, JULY 17TH.

9.30 a.m.—Whole day Excursion to Border and Scott Country.

MONDAY, JULY 18TH.

9.0 a.m.—*Council Meeting*, Robing Room, McEwan Hall.
10.0 a.m.—*Representative Meeting.*
2.0 p.m.—Opening of Reception Room, Waverley Market, Princes Street.
2.0 p.m.—Exhibition open for inspection, Waverley Market.
7.30 p.m.—Performances at Theatres: Lyceum Theatre, "The Doctor's Dilemma"; King's Theatre, "Rob Roy."

TUESDAY, JULY 19TH.

9.0 a.m.—Reception Room open.
9.30 a.m.—Official Opening of Exhibition by President-Elect.
10.15 a.m.—*Representative Meeting.*
11.0 a.m.—Opening of Pathological Museum, Anatomy Department, University New Buildings.
2.0 p.m.—*Annual General Meeting*, followed immediately by Representative Meeting, McEwan Hall.
*4.30 [illegible] St. Giles Cathedral.
*8.0 [illegible] and President's Address,
*9.30 p.m.—Reception by President and Local Executive, McEwan Hall.
10.30 p.m.—Dancing at Palais de Danse, Fountain Bridge.

WEDNESDAY, JULY 20TH.

9.0 a.m.—*Council Meeting*, Robing Room, McEwan Hall.
9.0 a.m.—Exhibition and Reception Room open.
10.0 a.m.—*Sectional Meetings*, University New Buildings and Royal Infirmary.
1.0 p.m.—Irish Graduates' Luncheon, Ferguson and Forrester's, 129, Princes Street.
2.30 p.m.—Secretaries' Conference (Branch and Division Secretaries), B.M.A. Scottish House, 6, Drumsheugh Gardens.
Afternoon Excursions.
*3.0 p.m.—Honorary Graduation, McEwan Hall.
*4.15 p.m.—Reception by the University of Edinburgh in Old Quadrangle.
6.30 p.m.—Secretaries' Dinner (Branch and Division Secretaries), University Union.
*8.0 p.m.—Lister Centenary Celebration, McEwan Hall.
8.0 p.m.—Concert: Chamber Music, Freemasons' Hall, 96, George Street.
9.0 p.m.—Dancing at Palais de Danse.
9.30 p.m.—Reception by the President and Fellows of the Royal College of Surgeons, Surgeons' Hall, Nicolson Street.

THURSDAY, JULY 21ST.

8.30 a.m.—National Temperance League Breakfast, University Union.
*9.0 a.m.—*High Mass at Roman Catholic Cathedral*, Broughton Street.
9.0 a.m.—Exhibition and Reception Room open.
9.30 a.m.—Golf Competition for Uister and Childe Cups at Muirfield, Gullane.
10.0 a.m.—*Sectional Meetings.*
Afternoon Excursions.
4.0 p.m.—Garden Party at Inverleith House, Royal Botanic Garden: Ladies' Committee.
7.15 p.m.—*Annual Dinner of the Association*, Music Hall, 54, George Street.
8.30 p.m.—Concert: Hebridean Music by Mrs. Kennedy Fraser and Party, Freemasons' Hall, 96, George Street.

9.30 p.m.—Reception by the President and Members of the Edinburgh Branch of the British Medical Association, Palais de Danse, Fountain Bridge: Dancing (10 till 2).

FRIDAY, JULY 22ND.

8.0 a.m.—Holy Communion at St. Mary's Cathedral, Palmerston Place.
8.30 a.m.—Medical Missionary Breakfast, Crawford's, 70, Princes Street.
9.0 a.m.—Exhibition and Reception Room open.
10.0 a.m.—*Sectional Meetings.*
2.0 p.m.—Golf Competition for Treasurer's Cup at Gullane, No. 1 Course.
Afternoon Excursions.
4.0 p.m.—Reception by Royal Medical Society, 7, Melbourne Place.
8.30 p.m.—Reception by the Lord Provost and Magistrates of the City of Edinburgh at Scottish Zoological Park, Corstorphine.

SATURDAY, JULY 23RD.

Whole-day Excursion to St. Andrews, including Falkland Palace.

* Academic dress will be worn at these ceremonies.

PATHOLOGICAL MUSEUM.

The Pathological Museum Committee, of which Professor J. Lorrain Smith is chairman, Mr. D. M. Greig vice-chairman, and Dr. James Davidson (Department of Pathology, The University, Edinburgh), Mr. W. Q. Wood (25, Heriot Row, Edinburgh), and Dr. Douglas Miller (57, Manor Place, Edinburgh) are secretaries, has arranged an extensive series of demonstrations during the Annual Meeting. A list of these demonstrations, with the names of those responsible for the arrangement of each, is appended.

1. Diseases of Liver and Biliary Tract. Professor Wilkie and Dr. James Davidson.
2. Brain Tumours. Mr. Norman Dott and Mr. W. Q. Wood.
3. Diseases of Bone. Dr. James Dawson and Mr. J. W. Struthers.
4. Series of Complete Lung Sections illustrating Pulmonary Diseases in Infancy and Childhood. Dr. Charles McNeil, Dr. Agnes Macgregor, and Dr. W. A. Alexander.
5. Diseases of the Thyroid Gland. Mr. J. N. J Hartley.
6. Some Gynaecological Conditions. Dr. Douglas Miller.
7. Recent Experimental Work on Tumours. Mr. Illingworth.
8. Bacteriological Exhibit. Professor Mackie.
9. Dietetics. Professor Murray Lyon.
10. Urological. Mr. Wade, Mr. Leslie Stewart, and Mr. D. M. Morison.
11. Skin Diseases. Dr. Cranston Low.
12. Historical Section. Dr. John D. Comrie.
13. Peritoneal Lymphatic Absorption. Mr. Paterson Brown.
14. Comparative Pathology. Principal Bradley and Professor Matheson.
    The following special subjects to be considered: Tubercle, Foot-and-Mouth Disease, and Diseases communicable to Man.
15. Statistical Methods. Colonel A. G. McKendrick, I.M.S.
16. A Series of Cases illustrating the method of teaching in the Department of Pathology. Professor Lorrain Smith and Dr. James Davidson.
17. Melanomata. Dr. James Dawson.
18. Diseases of the Breast. Professor John Fraser.
19. Thrombo-angiitis Obliterans. Mr. T. McW. Millar.
20. Tar Tumours. Mr. J. J. M. Shaw.
21. Plastic Surgery. Mr. J. J. M. Shaw.
22. Pathways of Infection to the Brain and Meninges. Dr. Logan Turner and Dr. Reynolds.
23. Experimental Nephritis and Accidental Haemorrhage. Professor Francis Browne.
24. Parasitology (including Tropical). Colonel Edward Greig, I.M.S., Professor Ashworth, and Colonel Glen Liston, I.M.S.
25. Ear, Nose, and Throat. Dr. J. S. Fraser and Dr. J. P. Stewart.
26. Venereal Diseases. Mr. David Lees.
27. Diseases of the Eye. Dr. Traquair and Dr. Charles Graham.
28. Radiological Exhibit. Dr. Woodburn Morison.
29. Vegetable Pathology. Dr. Malcolm Wilson.
30. Genetics. Dr. Crew.
31. Forensic Medicine. Dr. Douglas Kerr.
32. [illegible] Research Laboratory, Royal [illegible]
33. [illegible] Dott.

It is to be hoped that as far as possible those who contribute to the Museum will at stated times be present to demonstrate their own exhibits, and particularly those who wish to supplement by exhibits their contributions to the programme of the various sectional meetings. For these personal demonstrations a room will be provided and a time-table arranged.

LISTER CENTENARY CELEBRATION.

A commemoration meeting in celebration of Lord Lister's centenary will be held in the McEwan Hall, Edinburgh, on Wednesday, July 20th, at 8 p.m. Full details were published in the BRITISH MEDICAL JOURNAL on February 12th, (p. 299), but it may be recalled that the Earl of Balfour, K.G., O.M., will preside, and that short addresses will be delivered by Sir William Watson Cheyne, Professor Tuffier (Paris), Professor Harvey Cushing (Harvard University), and Professor John Stewart (Halifax, Nova Scotia).

Throughout the week of the Association Meeting a museum of Lister relics will be on view in the Upper Library of the Old University. The relics will be gathered from many sources. The unique interest of the exhibits will be due largely to the co-operation and liberality of the directors of the Wellcome Historical Medical Museum, London.

A *Lister Memorial Volume* has been prepared and will constitute the book of the Edinburgh Meeting of the Association. A copy will be presented to each member of the Association on registration in the reception room. The volume, edited by Dr. Logan Turner, will contain sketches and reminiscences by former house-surgeons of Lord Lister, two of his own scientific addresses, and a series of letters. A section of particular interest is included dealing with the lives of Lister's fellow residents in the Edinburgh Royal Infirmary during the summer of 1854. Sir Edward Sharpey-Schafer contributes a sketch on Lister's work as a physiologist. Mr. Miles writes on "Surgery prior to Lister's time," and Professor John Fraser on "The influence of Lister's work on surgery."

Memorial inscriptions have been placed on the walls of the houses which Lister occupied successively in Edinburgh —namely, 11, Rutland Street, and 9, Charlotte Square.

A prize of £25 and a gold medal are to be awarded to the writer of the best essay on "The influence of Lister on surgery." The prize is open to students and graduates of not more than one year's standing in any medical school in the British Empire. The name of the successful essayist will be announced at the public meeting.

ANNUAL DINNER.

As already intimated, the Annual Dinner of the Association will be held in the Music Hall, George Street, on Thursday, July 21st. The hour of the dinner will be *7.15 p.m. prompt*. It is desirable that early application be made for tickets, the price of which has been fixed at 15s., exclusive of wine. Such applications should be made to the local general secretary, Dr. Fergus Hewat, 14, Chester Street.

Dinner tickets will be available for members of the Association up to 4 p.m. on Wednesday, July 20th, and will be obtainable at the reception room on presentation of the member's card. A plan of the tables will be on view at the reception room.

If seats are available, members may obtain tickets for ladies, or other guests, after 4 p.m. on Wednesday, July 20th.

REDUCED RAILWAY FARES TO EDINBURGH.

The usual concession to members of the British Medical Association in regard to railway fares will apply to the Annual Meeting in Edinburgh this summer. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue passenger tickets to Edinburgh, available from July 13th to 25th, at the ordinary single fare and one-third for the double journey, with a minimum adult fare of 1s. A printed voucher filled in by the applicant and signed by the Financial Secretary of the Association, must be given up at the booking office when the ticket is bought. These vouchers will be obtainable in due course from the Finance Department, British Medical Association, Tavistock Square, W.C.1. The cheap fare concession will, in addition to applying from stations in Great Britain, also operate from the Irish ports by railway-owned steamers, and by the boats of the Belfast Steamship, British and Irish Steam Packet, and the City of Cork Steam Packet Companies, and of Messrs. Burns and Laird, Ltd.

HOTEL ACCOMMODATION.

The Hotels and Lodgings Committee has practically completed its arrangements for coping with the large numbers who are expected to visit Edinburgh in July. In order to secure the accommodation which is believed to be necessary, the Committee has definitely engaged all the available rooms in the city, and will allocate these to applicants in rotation. The Scottish Medical Secretary (Dr. Drever) has undertaken to do this work for the Committee, and applications for rooms should be sent to him at 6, Drumsheugh Gardens. A form for the purpose has been prepared for the convenience of members; it was printed in the advertisement pages on June 4th (p. 18). The accommodation is grouped in three classes—namely:

1. Hotels, whose tariff for bed and breakfast ranges between 8s. 6d. and 14s. The number who can be accommodated in these is comparatively limited.

2. Private hotels and boarding houses, at prices from 5s. 6d. to 8s. 6d. for bed and breakfast. Of these there is a large number, all of them comfortable.

3. Hostels where the tariff is 8s. for bed and breakfast. Not many of these are available, but those that are can be recommended.

It will facilitate other arrangements if members who intend to be present at the Annual Meeting will notify their intention whether they have already secured rooms or not. Early application for rooms is earnestly desired.

GOLF COMPETITIONS.

The Ulster and Childe Cups.

The Ulster and Childe Cups will be played for on Thursday, July 21st, at Muirfield, commencing at 9.30 a.m.

Both cups will be played for during the same round. The Ulster Cup is open to all members of the Association, the maximum handicap allowed being 18; the Childe Cup is open to all members of the Association who have a handicap of 10 or over, 18 again being the maximum allowed. Play in both cases is against bogey. If the Ulster Cup is won by any competitor with a handicap of 10 or over the Childe Cup will be presented to the player (with a handicap of 10 or over) with the next lowest score.

Conditions of play are as follows:

1. One round of eighteen holes to be played on Thursday, July 21st, at Muirfield. In the event of a tie the last nine holes to decide.

2. Competitors are not permitted to put in previous play on the course on the day of the competition.

3. Intending competitors are required to furnish with their entry a certificate signed by their club secretary stating (*a*) their lowest handicap, (*b*) the bogey score of their own course, and (*c*) the length of their course.

4. Entries to be made at the Reception Room, Waverley Market Hall, before 6 p.m. on Wednesday, July 20th.

5. Competitors may choose their own partners, although partners will be arranged for by the committee on notice being given at the time of entry.

6. Play to commence at 9.30 a.m., no cards to be issued after 3.30 p.m.

Treasurer's Cup Competition.

The final stage of this competition will be played on Friday, July 22nd, at Gullane No. 1, commencing at 2 p.m. The handicap allowed for the final stage will be the lowest handicap of the competitor as at July 22nd. Competitors may choose their own partners. In the event of a tie the last nine holes to decide. It is hoped to publish in an early issue of the SUPPLEMENT a list of the winners in the first (Division) stage of this competition.

Ladies' Competition.

This competition will be held on the morning of July 20th at Cammo. The rules governing it are as follows:

The competition to be played under the Ladies' Golf Union Handicap Rules (medal round eighteen holes) during the Annual Meeting. The winner to hold the cup for twelve months. In the event of a tie the last nine holes to decide. Entrance fee 2s. 6d., to be paid to the secretary of the Local Ladies' Sports Committee.

A replica of the cup will be given to the winner.

The competition will be open to the following: Lady members, wives of members, and daughters of members. Other relatives accompanying members to the meeting may be allowed to compete at the discretion of the Local Ladies' Sports Committee.

Competitors to send their full name, address, and L.G.U. handicap, together with the entrance fee, to the secretary of the Ladies' Golf Committee, Mrs. Mercer, 3, Rothesay Place, Edinburgh.

GARAGE ACCOMMODATION.

Garage accommodation for at least 1,125 cars will be provided; applications should be made to Dr. J. R. Drever, 6, Drumsheugh Gardens, Edinburgh.

ARRANGEMENTS FOR LADIES.

The Assembly Rooms in George Street have been taken for a ladies' club during the meeting. These rooms have a central position, and will comprise a large lounge, card and smoke rooms. There will also be a library and writing room, containing daily papers and books of local interest. An ample catering department will be established where lunch, tea, and light refreshments may be obtained. There will also be a central information bureau. The dinner to the ladies accompanying representatives will be held at this club on Friday, July 15th, at 7.30 p.m.

During the mornings of the meeting, short excursions for ladies will take place in and around Edinburgh. These will start from the club. Parties of ladies will also be taken in the mornings to places of special interest in Edinburgh. Guides will be in attendance to conduct any ladies to parts of the city they specially wish to visit.

Arrangements for ladies' sports have been undertaken, and parties will be made up for golf and tennis. The ladies' golf competition will take place on the morning of Wednesday, July 20th.

Full details as to excursions, personally conducted tours, and sports will be obtainable at the Ladies' Club.

REPRESENTATIVES' EXCURSION TO THE SCOTT COUNTRY.

On Sunday, July 17th, an excursion to the Scott country is being arranged. The Representatives and their friends will leave Edinburgh at 9.30 a.m. in charabancs and proceed to Rullion Green. On the site of the battlefield, surrounded by the hills and amid beautiful scenery, a short religious service will be held. Thereafter, proceeding by Penicuik and Leadburn, Peebles will be reached about 11.15. From there the route leads along the north bank of the Tweed, opposite the old house of Traquair, whose historic gates have never been opened since the failure of the Jacobite cause on Culloden Field. Passing the ruined castle of Elibank, with memories of Muckle-mou'ed Meg, and Ashiestiel, Sir Walter Scott's first border home, the excursionists arrive at Galashiels. Here lunch will be provided in the Volunteer Hall. Proceeding onwards, a mile distant on the south side of the Tweed is seen Abbotsford, Scott's later home. A mile further is Melrose Abbey, where a monastery was first established by St. Aidan in the seventh century. Here is buried the heart of The Bruce, and here is the resting place of many border chieftains. The Tweed is crossed by the Leaderfoot Bridge, and a brief pause will be made at Scott's View on Bemersyde Hill. The road next turns round Bemersyde House, presented by the nation to Earl Haig as a tribute to his services during the war. A halt will be made at Dryburgh Abbey, the seat of the monastic cell of St. Modan from the sixth century, and the burial place of Sir Walter Scott. Crossing the Tweed at St. Boswells, the route now follows the south bank of the river, past the ruins of the old border fortress of Roxburgh. Floors Castle lies on the left—we will hope glistening in the sunshine. Passing through Kelso, the way leads to the north and back to Floors Castle, where the party will be entertained at tea by His Grace the Duke of Roxburghe. The road back to Edinburgh passes over Soutra. From the top a view over a wide expanse is obtained. The Lothians lie at our feet. Just across the Firth is the "Kingdom of Fife," with Stirling further to the west. Beyond lie the Ochil Hills, and in the distance are the peaks of the Grampian Mountains. The road we travel has been trod by the feet of many generations. It gave passage to Scottish hosts on their way south and to invading English armies. Descending towards Edinburgh, we pass Soutra Aisle, an ancient hospitium, Crichton Castle, and after passing through Dalkeith with its palace we see the ruins of Mary Queen of Scots's residence at Craigmillar Castle. The tour above so shortly described embraces over 120 of the best miles in Scotland. It is full of associations with Scott, Stevenson, Andrew Lang, and Crockett; and tradition and story of the Roman occupation, of the perpetual wars along the Border, of the Covenanters, and of monastic life in the abbeys along the Tweed will be constantly recalled by the various features of the beautiful and romantic scenery amid which the excursionists will travel.

EXCURSION TO FIFE AND ST. ANDREWS.

On Saturday, July 23rd, a party limited to 100 will leave the Waverley Station by special train at 9.22 a.m. and proceed by way of the Forth Bridge, passing the Hawes Inn mentioned in *The Antiquary* and Stevenson's *Kidnapped*. The naval base of Rosyth will be seen on the left. After emerging from a tunnel, St. Margaret's Hope —where "St. Margaret" landed in Scotland—will come into view. Leaving behind Kirkcaldy, with its associations with Adam Smith, the party will arrive at Ladybank, be met by charabancs, and proceed to Falkland Palace. This building has associations with Scottish history from the days of King Robert the Bruce to Charles II, and was the scene of the alleged murder of the young Duke of

Rothesay by his uncle Albany (see *The Fair Maid of Perth*). Here James the Fifth died and Mary was a frequent visitor, fleeing from the exhortations of John Knox. The party will leave Falkland Palace at 11.30 and, by the kind invitation of Mr. and Mrs. Leslie Melville, will visit Melville House, which was built by the first Earl of Melville in 1692. Here are pictures of Mary Queen of Scots, Claverhouse, Gustavus Adolphus, and an interesting exhibition of letters by most of the Stewart kings. The party will next proceed by the old Royal Road which was followed by the kings of Scotland in passing to and from St. Andrews. Half-way lies Cupar, the county town. Here are the ruins of the castle in which Macbeth murdered Duncan, and from which Wallace drove the English, and here Sir David Lindsay's plays were acted. At Pitscottie the route follows the track of the murderers of Archbishop Sharp, over Magus Muir, where he was killed. At St. Andrews lunch will be provided by the courtesy of the Fife Branch. The Cathedral, Castle, and University Buildings will then be visited, after which tea will be provided at the Sir James Mackenzie Clinical Institute by the courtesy of Dr. Maitland Ramsay (the Director) and Mrs. Maitland Ramsay. The special train will leave St. Andrews at 5.10 p.m., arriving at the Waverley Station, Edinburgh, at 7 p.m. Price of ticket, inclusive of rail, motors, and entrance fees, 12s. 6d.

IRISH MEDICAL SCHOOLS' AND GRADUATES' ASSOCIATION.

The annual lunch of the above Association will be held at 1 o'clock sharp, on Wednesday, July 20th, at Messrs. Ferguson and Forresters, 129, Princes Street, Edinburgh. Tickets, 4s. each (exclusive of wines), may be obtained from the honorary secretary of the Provinces, Dr. Falkland L. Cary, 67, King's Road, Harrogate. Members of the Association are asked to bear in mind that Wednesday, July 20th, is the date allotted to the Lister Centenary celebrations, and there will be many appointments in the afternoon, so that punctual attendance at the luncheon is essential.

PROCEEDINGS OF COUNCIL.

Wednesday, June 8th, 1927.

A MEETING of the Council of the Association was held at headquarters on Wednesday, June 8th. Sir ROBERT A. BOLAM, Chairman of Council, presided, and the following were present:

Mr. R. G. Hogarth (President), Dr. H. B. Brackenbury (Chairman of Representative Body), Mr. N. Bishop Harman (Treasurer), Sir Robert Phil[illegible] C. O. Hawthorne (Deputy-Chairman of [illegible]. G. A. Allan, Dr. J. Barcroft Ander[illegible] Sir Percy Bassett-Smith, Dr. H. S. Beadles, Sir Alfred Blenkinsop, Dr. J. W. Bone, Dr. H. C. Bristowe, Dr. G. F. Buchan, Dr. H. G. Dain, Dr. C. E. Douglas, Mr. T. P. Dunhill, Mr. W. McAdam Eccles, Dr. D. E. Finlay, Dr. E. R. Fothergill, Dr. F. J. Gomez, Dr. D. G. Greenfield, Dr. R. Wallace Henry, Dr. G. B. Hillman, Dr. J. Hudson, Dr. R. Langdon-Down, Dr. David Lawson, Dr. E. K. Le Fleming, Dr. E. Lewys-Lloyd, Sir Richard Luce, M.P., Dr. A. Lyndon, Dr. J. A. Macdonald, Dr. S. Morton Mackenzie, Dr. J. G. McCutcheon, Dr. A. Manknell, Dr. O. Marriott, Dr. J. C. Matthews, Dr. G. W. Miller, Dr. Hugh Miller, Dr. Christine Murrell, Mr. A. W. Nuthall, Lieut.-Colonel F. O'Kinealy, Dr. W. Paterson, Dr. J. Dodds Price, Dr. F. Radcliffe, Dr. John Stevens, Dr. W. E. Thomas, Dr. G. Clark Trotter, Mr. E. B. Turner, Sir Jenner Verrall, Dr. J. F. Walker.

Apologies for absence were received from the Past President, Dr. J. S. Darling, Dr. I. W. Johnson, Dr. R. W. Leslie, Dr. R. A. Lyster, Dr. John Mills, Group Captain N. J. Roche, Mr. H. S. Souttar, Dr. Lockhart Stephens, Dr. D. Walshe, and Sir William de Courcy Wheeler.

Personal.

The congratulations of the Council were accorded to the members of the Association upon whom knighthoods had been conferred on the King's Birthday—namely, Dr. E. Farquhar Buzzard and Dr. C. J. Martin of London, Dr. L. E. Barnett of Dunedin, New Zealand, and Mr. C. P. B. Clubbe of Sydney.

The Chairman communicated a letter from the Solicitor to the Association (Mr. W. E. Hempson), who stated that he had decided, after much thought, not to seek reappointment next year to the position it had been his privilege to hold for just on thirty years. Mr. Hempson added that throughout his professional life no client had been held in the esteem which he bore to the British Medical Association, and its work had at all times been a pride and pleasure to him, calling for the best that he could give in point of counsel. The Chairman said that they would all appreciate the deep feeling with which Mr. Hempson had written that letter. For twenty-seven years he had been the appointed Solicitor to the Association, and for some time before that he assisted it unofficially. During all those years he had been a very good friend. He had taken an interest in the Association which extended far beyond the interest which ordinary business relationships involved. He had also been a prominent and well loved figure at the annual meetings, and it would be a great regret to them all that next year they would lose his services. The appointment would be a matter for the new Council, but he thought he would be interpreting the wishes of everyone in recommending to the Representative Body that Mr. Hempson, in recognition of his faithful and devoted services as Solicitor to the Association for twenty-seven years, should be elected an honorary member. This was carried unanimously, and with acclamation.

The Chairman reported that he had appointed Dr. C. Hubert Bond to act as representative of the Association at the recent celebration in Paris of the centenary of the death of Pinel and the birth of Vulpian. Dr. Bond had presented an address in the name of the Association, paying a tribute of admiration to these two great representatives of French neurological medicine and illustrious physicians of La Salpetrière.

The Trade Disputes and Trade Unions Bill.

Dr. Bone, Chairman of the Medico-Political Committee, brought forward a report on the Trade Disputes and Trade Unions Bill from certain points of view in which it might conceivably affect the profession. He said that the immunity afforded by the bill to those concerned in a dispute within a "trade or industry" did not seem, on a narrow reading of the words, to cover the medical profession, as it was doubtful whether a court would hold that the profession was a trade or industry. The committee had drawn the attention of Sir Richard Luce, M.P., to the position, with a view to getting the first clause of the bill—the clause giving protection—extended to cover "occupation" or "employment."

Sir Richard Luce said that he had taken the opinion of an eminent lawyer in the House, which was that the words "trade or industry" would cover the medical profession, and he did not think it necessary to add the word "occupation."

Dr. Brackenbury said that the difficulty in the bill as at present worded was the discrepancy between the first clause and the definition clause at the end. These two clauses were not in the same terms, and in his submission they ought to be. He understood from Sir Richard Luce that his own and other eminent opinion was that the medical profession was included in the term "trade or industry" which appeared in the protecting clause; he would be happier if the opinion were that of the Attorney-General, who was in charge of the bill. But it was not the present Law Officers who would have to determine the matter, should occasion ever arise; it was the Courts of Law. Personally he did not wish to see the profession described as a trade or industry, though it had for certain purposes been accepted as a business. Certain strikes in a trade or industry were protected by the first clause, but in Clause 8 a strike was defined as "the cessation of work by a body of persons employed acting in combination," etc., and nothing was said there about a trade or industry. The present difficulty might be met either by adding in the first clause the words "or employment," or by inserting the words "in a trade or industry" in the defining clause: "The cessation of work by a body of persons employed in a trade or industry acting in combination," etc. The latter was the remedy he would prefer, because it would remove the medical profession, not being a trade or industry, from the definition of a strike altogether.

Sir Richard Luce said that one of the professions—that of the actor—had already been ruled to be an industry. Dr. Macdonald and Sir Jenner Verrall supported Dr. Brackenbury in thinking that some amendment either of the first (the protecting) or of the defining clause was necessary. Dr. Dain said that if the medical profession was not a trade or industry it was not protected by the first clause, and as the employment of insurance practitioners was in a sense State employment, any future action on their part similar to the action contemplated three years ago might be considered as embarrassing the Government and so come under the penal clauses of the bill. Sir Richard Luce pointed out the difficulty of getting any new amendments considered under the guillotine procedure. Dr. Brackenbury suggested that the Attorney-General might perhaps be approached through the very influential medical element in his own constituency (Marylebone).

It was agreed to ask Sir Richard Luce to convey the feeling of the Council to the members of Government in charge of the bill with a view to some amendment which would safeguard or at least clarify the position.

Married Women (Employment) Bill.

A discussion arose, also on the report of the Medico-Political Committee, on the Married Women (Employment) Bill, which is designed to prevent any refusal to employ a woman in the public service on the sole ground that she is married. Dr. Bone said that his committee considered that the principle involved in the bill should be supported as a corollary to the policy of the Association in demanding equal pay for equal work as between men and women practitioners, and he moved that the Council recommend to the Representative Body that marriage should be no bar to the employment of a registered medical practitioner in a medical capacity.

Mr. Bishop Harman hoped that the Association would avoid being drawn into a reopened controversy, and mentioned certain cases in which marriage might legitimately be regarded as a bar to employment, also pointing out that if this recommendation were agreed to it would involve the refusal of advertisements for such appointments.

Dr. Brackenbury said that the Council would agree with the evident intentions of the Medico-Political Committee, but he thought the case was overstated in the recommendation to which assent was asked. If a local authority were appointing a whole-time medical officer, while they would all agree that men and women should be equally eligible, the authority surely had a right to say that, having regard to the duties of a particular appointment, it would not appoint a married woman. It was a different matter if, having appointed a woman without any such conditions, it dismissed her on marriage. The same thing might apply to a man practitioner. Suppose an oil company was arranging an expedition to some desert region and required a medical officer, would it be improper for that company to lay down as a condition of employment that candidates must be unmarried?

Dr. Bone agreed to withdraw the recommendation for reconsideration.

Landlord and Tenant Bill.

Dr. Bone said that the Medico-Political Committee had taken steps to get premises occupied by a medical man included in the beneficial provisions of the Landlord and Tenant Bill. Dr. Walker urged that requests should be made to the Divisions to approach local members of Parliament on this matter, which was one of great importance. The goodwill in the case of premises occupied professionally by medical men was probably a larger factor than in premises of any other description. Sir Richard Luce said that he had approached the Home Secretary on the question, and he was prepared to consider it favourably.

Individual Medical Defence.

Dr. Bone also brought forward communications which had been received from the Medical Defence Union and the London and Counties Medical Protection Society dealing with representations made by the Association to the societies on the position of medical practitioners with regard to defence. The longer of these communications was published in the JOURNAL, May 14th (p. 898), and was a joint letter from the two societies. Dr. Beadles expressed the view that there were two questions which should be raised with the Medical Defence Union. One of these was the fact that the Union could not prosecute one of its own members before the General Medical Council, and the other was with regard to the circular which the Union had sent out stating that in cases of injuries to joints it would not defend a practitioner who had not had an *x*-ray picture taken.

International Medical Sea Code.

Another matter brought forward by the Medico-Political Committee was a suggestion by the medical superintendent of the Cunard Line that there should be an international code for communication between medical officers in charge of ships at sea, suggesting that as a first step a committee be set up to consider a scheme. The Medico-Political Committee was willing to co-operate to the extent of appointing members to any such committee, but it hesitated as to taking the initiative.

The Chairman of Council said that this rather appealed to him as a useful piece of work, and one which the Association could properly undertake. Mr. Turner was of opinion that it would be a very good thing to set up such a committee, and that a sympathetic response both from the shipping companies and from the seamen's organizations was ensured. Sir Percy Bassett-Smith also supported the taking of initial steps by the Association. Dr. Buchan suggested that the committee should get in touch with Sir George Buchanan, who was the British representative on the International Health Committee. The Council agreed to ask the Medico-Political Committee further to consider the matter, in view of the feeling in favour of a lead being taken by the Association.

Public Education in Health.

Dr. Lewys-Lloyd, chairman of the Public Health Committee, brought forward a memorandum consequent upon the instruction by the Annual Representative Meeting, that the question of how Branches and Divisions of the Association could make their contribution towards public education in health should be considered by the Council. The committee, however, had widened its reference, and had considered central as well as peripheral methods of health education. Among the central methods considered was the dissemination through the lay press of information prepared by medical practitioners who were authorities on the subject treated, and who would, of course, conform to the principles laid down by the Association with regard to indirect advertising. As a preliminary step a conference might be called between representatives of the Association and some representative body in the newspaper world. Another suggestion was that the Association might publish a popular periodical, somewhat on the lines of a monthly magazine published by the American Medical Association, with a view to counteracting the constant stream of foolish talk on medical matters in the lay press. The Hastings Lecture, on the lines of the one recently delivered by Sir Berkeley Moynihan, should be given from time to time. With regard to peripheral methods, it was suggested that each Division should call the attention of the local authorities to the fact that under the Public Health Act, 1925, they could finance health education, and should offer to assist in such propaganda, various forms of which were indicated. A Branch or Division might also itself promote public lectures and arrange conferences, especially on some local problem of medico-sociological interest. Any additional expense which this new form of activity involved would be in the control of the Council. It was felt that such work would tend to raise the status of the local profession and of the Association, and would give the Divisions greater influence than at present with the public, and with public authorities.

The Chairman said that this was a very important project, and the suggestions for the central methods would mean the employment of professional men and a good deal of office work and expense. Moreover, it would mean attempting where others had failed.

Dr. Brackenbury pointed out that the resolution of the Representative Meeting said nothing about central activities, but only about the activities of Branches and Divisions. He suggested, therefore, that the part of the report which dealt with peripheral methods—not a very happy term—should go forward to the Representative Body, and the remainder should be reserved for the consideration of the Council on a later occasion.

Mr. Turner was glad that this matter had come forward. Properly carried out, it would be one of the best pieces of work the Association had ever done. Any arrangement with the press, however, would require very careful handling, on account of the partiality of the press for stunts, headlines, and

advertisements. The first Hastings Lecture was admirable, but such lectures did not quite reach the people desired, and he thought that the Birmingham effort, whereby insurance practitioners addressed in a meeting the persons on their lists, was to be commended. He also urged a closer linkage between the Association and other voluntary bodies, such as those responsible for "health weeks."

Dr. Buchan, as a member of the committee, said that while the committee had gone beyond its instructions and had dealt with central methods, it had found when it sat down to the problem how difficult it was to consider peripheral methods apart from the help which some central scheme might afford.

Dr. Fothergill hoped that a preliminary conference with representatives of the press would take place. Sir Jenner Verrall rather hesitated over any abandonment by the Association of its former attitude of a certain aloofness towards the popular press. Dr. McCutcheon asked what subjects could be discussed at any such conference. Dr. Fothergill replied that it might be pointed out, in general terms, that the Association had noticed how questions of public health tended to be inadequately dealt with in large sections of the press, and had wondered whether the press could be served by the Association in such a way that the treatment of these questions would be more instructive and useful than was the case at present.

Eventually it was agreed to send to the Representative Body the portion of the report which dealt with peripheral methods, and to refer back to the committee for closer study and more concrete suggestions the portion which dealt with the activities that might be undertaken centrally.

Royal Commission on Lunacy and Mental Disorder.

Dr. Langdon-Down, chairman of the Committee on Lunacy and Mental Disorder, submitted a memorandum on the Report of the Royal Commission. He pointed out that there was some urgency with regard to this matter, as at any time legislation might be set in motion, and the Association should be ready with its policy. He regretted that owing to this haste the report of his committee lacked a certain finish; it would have benefited by closer revision and condensation, but he did not apologize for it. Although it necessarily sounded a critical note with regard to the Report of the Royal Commission, his committee appreciated what that body had done, and recognized its sympathetic attitude towards the profession. He thought it might be said that on all the matters on which the profession was attacked the report had vindicated it, also that many doubts in the public mind had been swept away by the terms of the report. But inevitably at this stage, with legislation possibly imminent, the Association was in the role of critic. His committee felt that in some respects the recommendations of the Royal Commission failed to give effect in practice to the aspirations and objects which in the body of its report the Commission professed to have in view. The position now was the reverse of what it was when the Association gave evidence. Then it was the Association which was formulating proposals and the Commission which was criticizing them; now the proposals were formulated by the Commission, and the Association was the critic. In certain respects the Association was now asking, in the light of all the matters which had been submitted to public inquiry, for rather more than it asked when it presented its evidence; in other respects it was asking for rather less. There were two main questions concerned—one the protection of the doctor against vexatious actions, the other the classification of cases. The Association had urged upon the Commission the desirability of securing for medical practitioners acting under the lunacy law the protection afforded by "witness-status," but the Commission was unable to endorse that proposal. Should the Association insist upon its claim and approach Parliament? The claim for "witness-status" assumed that the proceedings in lunacy were comparable to a court of law, which was denied by the Commission. The Commission, however, did take one step in advance. Whereas previously medical men were accorded protection if they could prove that they were not careless or fraudulent, the Commission now proposed that the onus should be changed to this extent, that it had to be proved against the medical man that there was prima facie evidence that he had been negligent or had not acted in good faith. That was a substantial advance. It might be possible to secure modifications of this amendment proposed by the Royal Commission likely to make it more effective for the purpose in view. One of these might be the appointment of an assessor with medical experience to assist the court or the judge in chambers in deciding whether or not such a prima facie case had been made out.

Recently Dr. L. A. Weatherly had suggested (JOURNAL, April 9th, p. 693) that if medical men would utilize the provisions of Section 13 of the Lunacy Act, 1890, they would escape liability. His committee doubted whether the position maintained by Dr. Weatherly was legally sound, and he himself did not look upon the suggestion as an entirely proper solution of the question. The whole ground of immunity in that aspect would depend upon an assertion that the relation to the patient was not that of a doctor, but that of a servant of the State.

Dr. Langdon-Down then passed to the question of the provisional treatment order. The Association had proposed that the great mass of early cases of mental disorder should be dealt with in the first instance without any judicial procedure or certification at all; the Commission proposed to divide the cases or the procedure in respect to them, and to separate the volitional from the non-volitional, recommending in the former case a method of treatment free from judicial order or control. The Commission appeared to think that the modifications would do away with the objections of the public to the ordinary reception order, but in the committee's view this modified procedure was indistinguishable in its effect and stigma from the provisional order as it stood at present.

Dr. Hawthorne asked that the report might be referred back. He greatly appreciated the ability which Dr. Langdon-Down had shown in preparing and presenting the evidence to the Commission, but he could not follow him all the way in his present report. He thought that Dr. Langdon-Down had not taken sufficiently into consideration the important fact that members of the profession in all parts of the country were exceedingly anxious concerning certification, and in increasing numbers were refusing to sign certificates at all. He criticized the report for certain inadequacies of presentation and omissions—the omission, for instance, of any reference to Section 13—and he regretted any weakening on the question of witness-status. He quoted even a lay authority in support of the view that there was reasonable and adequate ground for the claim to immunity and protection such as other witnesses received. The case was even stronger to-day than when it was put up to the Royal Commission, because the Commission had stated that in the whole of its investigations it had not discovered a case of wrongful certification, which was a great testimony to the reliability of the profession; moreover, the proceedings of certification, such as the duties of the certifying magistrate, would become, under the Commission's recommendations, more judicial in character, which consequently enhanced the claim for witness-status for the practitioner. With regard to the provisional treatment order, his submission was that the committee's report showed a certain confusion between two essentially different things: treatment of incipient mental disorder without certification, and treatment of cases of mental disorder which required restraint but were hopeful as regards recovery.

Dr. Radcliffe also urged that the report be referred back, because he considered that it did not deal adequately with the difficulties which might have to be faced by the general practitioner. Dr. Bone said that one reason why the Commission had turned down the claim for witness-status was because the Association witnesses, among others, had naturally said, in reply to a question, that they did not desire to protect a man who had given a certificate negligently or in bad faith. Dr. Brackenbury thought that the proposals in the report for the protection of the practitioner would not altogether commend themselves to the Representative Body, and he could not see how the presence of an assessor would be necessarily helpful. The Council ought either to make some definite recommendations for safeguarding the doctor's position or to say that, under this menace, he should not sign a certificate at all.

The remainder of the discussion related to procedure, and it was suggested that, as the Council had not had time fully to examine and amend the document, it should go forward to the Representative Meeting merely under the imprimatur of the committee. Eventually, after further discussion, it was agreed that in the Supplementary Report of Council a paragraph should be inserted to the effect that the Council had not been able to carry out entirely the directions of the Representative Body, in the first place because the Harnett v. Fisher case was until very recently *sub judice*, and in the second place

because the report of the Royal Commission had been awaited, but that the chairman of the Lunacy and Mental Disorder Committee, on the authority of his committee, was circulating confidentially to the representatives the report presented to the Council that day, amended in certain minor particulars as a result of the discussion.

Scale of Public Health Salaries in Scotland.

Dr. Hugh Miller, for the Scottish Committee, brought forward a further report on the scale of salaries for medical officers employed by local authorities. The recommendation was that the minimum scale be modified in its application to Scotland, the principal modification, or the one which led to the chief discussion, being that the commencing salary of officers employed in departments be on a graded scale, the average salary for ten years being not less than £600, the minimum commencing salary to be not less than £500. The Board of Health had stated that it was prepared to issue to local and education authorities a circular letter, not carrying with it any approval of the scale as such, but merely stating "that in the opinion of the Board it affords a reasonable basis for a local authority's decision. In so far as future appointments made by local authorities involve payment of State grant, the Board's approval of an initial salary that does not exceed the sum stated in the scale may be assumed." Dr. Miller said that he was not going to suggest that his committee, in proposing this modification, was very enthusiastic, but it felt that this was a reasonable way of bringing the matter to a solution.

Dr. Buchan, in criticizing the recommendation, said that the public health service of Scotland was not isolated; it affected the public health service in England. It was putting back the hands of the clock to start at £500, which was £100 less than the commencing salary in England, and in the name of 3,000 officers who were practically solid for maintaining this scale he begged Dr. Miller to take back his report. Dr. Lewys-Lloyd had hoped that there would be more cordial support from the authorities in Scotland. Dr. Dain asked how Scottish practitioners would reply to the Board of Health if it should be required in future that the insurance capitation fee in Scotland must be one-sixth less than in England. Dr. Allan said that the Council had allowed the Scottish Committee to negotiate with respect to modifications of the present scale, so that the principle of differentiation as between England and Scotland had been by inference accepted. It was not true that the scale in Scotland was one-sixth less than in England. In England a man started at £600, but ten years later he might still be receiving £600, whereas in the Scottish scale it was required that the average salary over a period of ten years must be not less than £600.

The Chairman of Council, speaking as a member, agreed that Scotland had been allowed to suppose that some degree of self-determination to meet local circumstances would be favourably considered. There was in Scotland not more than 7 or 8 per cent. of the total membership of the public health service of Great Britain. Should this proportion be allowed to be on different terms from the rest of the country? If it could be shown that the smaller initial salary was compensated for by better increment it might be possible to give one's adhesion to the proposition, and it was true that there was a tendency in England, when a man started at £600, to keep him at that figure. On the other hand, there was no doubt that if a lower scale were accepted for Scotland the repercussions would be felt in England. He had been agreeably surprised at the success of the effort to stabilize the scale in England, at a time, too, of great financial stress. Personally he would find it very difficult to give a vote on this question.

Dr. Brackenbury pointed out that the Council had only consented to reconsider the scale in Scotland provided it received a reasonable amount of support from the authorities there. He thought the support received from them was not sufficiently cordial, and he was of opinion that it would be best to stick to the £600 minimum, even though they were aware that they might fail very largely in Scotland, and might not even have the entire support of Scottish medical opinion.

Dr. Miller said that since these negotiations began, Glasgow and Lanarkshire, which together accounted for one-half the population of Scotland, had adopted scales of salaries in conformity with the scale now set out. Was it wise, then, to throw it back? The Association had done some exceedingly good work among undergraduates in Scotland, but what would be the position if every public health appointment in Scotland had to be the subject of an Important Notice? He further said that the Board of Health had lately been endeavouring on several occasions to get local authorities to pay higher salaries, whereas in the past it had on occasion tried to get them to reduce salaries. He could not see how the Council could reasonably and logically refuse to give what was desired in Scotland simply because it was going to have an adverse effect in England.

After some further discussion, Dr. Miller withdrew to confer with his colleagues of the Scottish Committee, and afterwards stated that the Scottish Committee agreed to withdraw this matter temporarily and to send representatives to the conference shortly to take place between the Association and the Society of Medical Officers of Health, at which, he hoped, the Scottish Branch of the Society would also be represented.

Headquarters Affairs.

The Chairman, on behalf of the Building Committee, presented a report on the extension of the Association's premises in the Tavistock Square neighbourhood.

Among gifts to headquarters reported was an autograph letter written by the founder, Sir Charles Hastings, presented by Mr. Grey Turner of Newcastle, who suggested that the Association might undertake a collection of medical autographs. The Office Committee had agreed to this, and it was suggested that the collection might include autograph letters of persons who had held high position in the Association, celebrated medical men and women, and lay persons in some way connected with the medical profession or medical affairs. Mr. Muirhead Little had intimated his willingness to take charge of the collection, which would be kept in the House of the Association. Another gift reported was from the South African Federal Council in the shape of two kudu (African antelope) heads, together with an inscribed plate, which the Council had an opportunity of seeing and admiring later in the day. The Chairman was asked to convey the thanks of the Association to the South African Federal Council.

The Council agreed to mark the site of the foundations of the original Tavistock House, where Charles Dickens lived from 1851 to 1860, by an inscription on the wall of the garden of the Association's House. Some of the bricks used in the wall are actually part of that foundation.

Collective Investigation by Individual Practitioners.

Dr. Hawthorne, for the Science Committee, brought forward a report on the proposed institution of a scheme for collective investigation. (See the Supplementary Report of Council, published in this week's SUPPLEMENT, para. 208.)

Dr. Douglas, as chairman of the joint subcommittee of the Science and Insurance Acts Committees, which had had charge of this proposal, said that a year ago the Ministry of Health forwarded a scheme of collective research by insurance practitioners for the consideration of the Insurance Acts Committee. Arising out of this scheme, and some subsequent schemes, the subcommittee had considered the matter, and had arrived at certain conclusions. One of them was that any scheme of research must be voluntary and unpaid. The Ministry's first suggestion was that the research should be confined to insurance practitioners in their insurance practice, but the subcommittee took a wider view, holding that there was no inherent difference between the insured and the uninsured. The subcommittee also thought it important that the researches should be undertaken by the Association, for this carried on an historical continuity of which the Association should be proud. This was no new thing; the same kind of work had been pursued at intervals since the early "sixties." It was hoped also to use the machinery of the Divisions. Another conclusion was that the subject or subjects should be capable of being dealt with by the individual practitioner in a simple manner, and that the results of the inquiry, in order to sustain interest, should be available after not too long a period. Two subjects had been selected for simultaneous investigation—namely; varicose ulceration, and the after-history of gastro-enterostomy. The Medical Research Council had been approached for a grant in aid of the expense which would be incurred in the appointment of a medical adviser, whose duty it would be to regulate and codify the work done, but the reply received was unfavourable, the Research Council preferring to support selected clinicians following chosen lines of

study. It was felt, however, by the subcommittee and by the Science Committee that the Association should proceed with the scheme, and it was hoped to secure the services of a practitioner who would be willing, subject to the defrayment of out-of-pocket expenses, to render material assistance in conducting the investigations.

The Council agreed to recommend the proposals to the Representative Body for approval.

Medical Representation in Parliament.

Mr. Bishop Harman, for the Parliamentary Elections Committee, reported an offer by the trustees of the National Insurance Defence Fund to place at the disposal of the committee the sum of £1,000 for the support of medical men as candidates for Parliament. The offer was made subject to the conditions that the candidates be approved by the trustees of the Trust, that they be also supported by the trustees of the Association's fund for securing medical representation in Parliament, that the trustees of the Defence Trust be adequately represented on the Parliamentary Elections Committee, and that a report be made to the Panel Conference.

It was agreed to recommend to the Representative Body that the Council be authorized to accept this offer, and also to express the opinion that members should be urged to contribute to the Association's fund for medical representation in Parliament in order that the volume of individual contributions to that fund should reach a total at least equal to the promised contribution from the Defence Trust. The committee was also of opinion that special attention should be paid to University seats, which offered a fair opportunity for a certain number of medical candidates if carefully selected, and a recommendation to this effect to the Representative Body was also agreed to.

Other Committees.

The reports of the Insurance Acts Committee, the Journal Committee, and a preliminary report by the Psycho-Analysis Committee, all of which contained no recommendations, were received and approved, as were reports by the Finance and Organization Committees, which contained business only of a routine or internal character.

Dr. Wallace Henry, for the Ophthalmic Committee, submitted for approval (which it received) a memorandum of evidence to be given on behalf of the Association before the Departmental Committee set up by the Ministry of Health on the Optical Practitioners (Registration) Bill. Dr. Wallace Henry, Mr. Bishop Harman, and the Medical Secretary, or Deputy Medical Secretary, were appointed as witnesses to give oral evidence. It was also agreed to recommend to the Representative Body that the principle of providing ophthalmic benefit through clinics in large centres as an arrangement auxiliary to the existing scheme of attendance by ophthalmic surgeons privately should be approved, subject to the arrangement under which such clinics were established receiving the approval of the Council.

Dr. Lyndon, for the Ethical Committee, brought forward a report on the machinery of the Association for dealing with professional disputes. The report forms Appendix I to the Supplementary Report of Council (SUPPLEMENT, p. 258).

It was agreed to present the report for the information of the Representative Body, together with the recommendation that no extension of the machinery was at present necessary or desirable. Some discussion arose on a further recommendation by the Ethical Committee relating to the policy to be pursued with regard to advertisements of nursing homes and therapeutic institutions Eventually, Dr. Lyndon agreed to the reference back of the recommendation for redrafting.

Dr. Bone made a brief report for the Puerperal Morbidity and Mortality Committee, in which he outlined the arrangements for the proposed conference which would consider the general position in regard to this subject in this and other countries, and in which, it was hoped, the point of view of the Ministry of Health, the general practitioner, the medical officer of health, and the Central Midwives Board would be stated. The report of the conference would be considered by the full committee, which would then prepare its final report to the Council, and it was hoped that this would be available for discussion by the Annual Representative Meeting of 1928.

The Council, which began its business at 10 a.m., rose at 8.45 p.m. A note on the complimentary luncheon, at which the chairman (Sir Robert Bolam) was entertained by his colleagues, appeared in the JOURNAL last week (p. 1114).

Association Notices.

NOTICE OF ANNUAL GENERAL MEETING.

NOTICE CONVENING MEETING.

NOTICE IS HEREBY GIVEN that the Annual General Meeting of the British Medical Association will be held in the McEwan Hall, The University, Edinburgh, on Tuesday, July 19th, 1927, at 2 p.m. Business: (1) Minutes of last Meeting; (2) Appointment of Auditors; (3) Report of Election of President for 1928-29.

ALFRED COX,
Medical Secretary.
L. FERRIS-SCOTT,
Financial Secretary and Business Manager.

TABLE OF DATES.

July 1, Fri.	Amendments and riders by Divisions and Branches for inclusion in A.R.M. Agenda must be received at Head Office by this date
July 15, Fri.	*Annual Representative Meeting*, Edinburgh, 10 a.m. *Nominations for election of 12 members of Council by* grouped Representatives must be received (at A.R.M., Edinburgh) by this date, 2 p.m.
July 16, Sat.	*A.R.M.* (Edinburgh).
July 18, Mon.	*Council* (Edinburgh) *A.R.M.* (Edinburgh)
July 19, Tues.	*A.R.M.* Annual General Meeting, Edinburgh, President's Address.
July 20, Wed.	*Council* (Edinburgh). Conference of Honorary Secretaries (Edinburgh). *Meetings of Sections*, etc., Edinburgh.
July 21, Thurs.	*Meetings of Sections*, etc., Edinburgh.
July 22, Fri.	*Meetings of Sections*, etc., Edinburgh.

ALFRED COX, *Medical Secretary.*

BRANCH AND DIVISION MEETINGS TO BE HELD.

BATH AND BRISTOL BRANCH: BATH DIVISION.—The annual meeting of the Bath Division will be held at the Spa Hotel, Bath, on Wednesday, June 29th, at 4 p.m. Agenda: Report of the Executive Committee; report of the Spa Subcommittee; to elect officers, representatives on the Branch Council, and ordinary members of Executive Committee; report of Executive Committee as to the scale of minimum commencing salaries for public health medical officers, and recommendation of Executive to adopt resolution under its Ethical Rules.

BORDER COUNTIES BRANCH.—The annual meeting of the Border Counties Branch will be held at the Crown and Mitre Hotel, Carlisle, on Friday, July 8th, at 4 p.m. The Branch Council will meet at 3.30 p.m. Agenda: Branch Council's report and financial statement; report of the election of office-bearers for 1927-28. Dr. J. R. Burnett will give his presidential address, entitled "Some notes on the history and work of the St. John Ambulance Association." Tea at the kind invitation of the president.

BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.—The annual meeting of the Dumfries and Galloway Division will be held in the Royal Infirmary, Dumfries, on Friday, July 1st, at 3 p.m. Agenda: Election of officers and Executive Committee; consideration of Report of Council and instruction to representative; programme for 1927-28.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—A meeting of the Bournemouth Division will be held in the St. Peter's Small Hall, Bournemouth, on Monday, June 27th, at 4.15 p.m. Tea at 4 o'clock. Agenda: Instruction to representatives to Annual Representative Meeting. Members are asked to bring the BRITISH MEDICAL JOURNAL SUPPLEMENTS of April 23rd and 30th and June 25th. Preliminary notice is given that the summer social meeting will be held at Palace House, Beaulieu, by kind permission of Lord Montagu of Beaulieu, on Saturday, July 2nd.

KENT BRANCH: ISLE OF THANET DIVISION.—A meeting of the Isle of Thanet Division will be held at the County Sanatorium, Lenham, Kent, on Thursday, June 30th, at 3 p.m. Through the courtesy of the medical superintendent and board, members will be given an opportunity of seeing over the sanatorium.

METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.—A meeting of the Hendon Division will be held to-day (Friday, June 24th), at 8.30 p.m., at Hendon Cottage Hospital, for the purpose of instructing the representative of the Division with reference to the forthcoming Annual Representative Meeting at Edinburgh. The following is the provisional programme for 1927-28:

October 14th.—Combined clinical meeting and dinner, Brent Bridge Hotel. Address by Dr. James Neal: Medico-legal difficulties in general practice.
November 25th.—Clinical meeting. Dr. Eric Pritchard: Infant feeding.
December 16th.—Social evening. Dance to be held in connexion with Hendon Cottage Hospital.
January 27th, 1928.—Clinical meeting. Dr. Archibald Leitch: Modern views on cancer.
March 2nd.—Clinical meeting. Dr. J. M. H. MacLeod: Some observations on ringworm and its treatment (with lantern illustrations).
March 30th.—Combined clinical meeting and dinner, Brent Bridge Hotel.
April 27th.—Annual meeting of Division.

All meetings will be held on Fridays, at 8.30 p.m., at Hendon Cottage Hospital, unless otherwise stated.

METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.—The next meeting of the North Middlesex Division will take the form of a visit to the Shredded Wheat Company's factory at

Welwyn Garden City on June 30th, at 3.30 p.m. Guests (ladies or gentlemen) and non-members of the Division will be cordially welcomed.

NORTH OF ENGLAND BRANCH.—The annual meeting of the North of England Branch will be held at the Queen's Head Hotel, Morpeth, on Thursday, June 30th. Programme:—12.30 p.m.—Business meeting. Agenda: Annual report and financial statement of the Branch Council; to elect officers for the ensuing year. 1.15 p.m.—Luncheon: the incoming president, Dr. F. Beaton, has expressed a desire to entertain the members present to lunch. Those who intend to accept this invitation are asked to notify the honorary secretary, Mr. Norman Hodgson, M.S., F.R.C.S., 7, Windsor Terrace, Newcastle-on-Tyne, not later than Monday, June 27th, as only those who give notice will be provided for. 3 p.m.—The annual golf competition for the cup presented by Dr. D. F. Todd will take place on the Morpeth golf course; those intending to compete are asked to notify the honorary secretary, stating their club handicap. For those who do not play golf, a visit has been arranged to Newminster Abbey and private grounds, by kind permission of Sir George Renwick, also a visit to Mitford village and church if time permits. Members are asked to notify the honorary secretary if they wish to go with this expedition. 5 p.m.—Tea will be served at the Queen's Head Hotel.

NORTHERN COUNTIES OF SCOTLAND BRANCH.—The annual meeting of the Northern Counties of Scotland Branch will be held at the Cluny Hill Hydropathic, Forres, on June 25th, at 1 p.m. Agenda: Report of election of Branch officers; report of Branch Council and annual financial statement. At 1.30 p.m. the members and their guests will lunch together at the Hydropathic. In the afternoon there will be an opportunity for those who wish to play golf to do so on the excellent golf course at the Hydropathic.

SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.—A meeting of the South Suffolk Division will be held at the Crown and Anchor Hotel, Ipswich, to-day (Friday, June 24th), at 3.30 p.m. Agenda: Business arising from minutes; election of chairman for 1928 (*re* Dr. Hare, resigned); consideration of Annual Report of Council and instruction to representative; any other business.

SURREY BRANCH: CROYDON DIVISION.—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, June 29th. Tea at 4 p.m. previous to the meeting. Agenda: Correspondence; Report of Council and Supplementary Report; any other business. Members are requested to bring to the meeting BRITISH MEDICAL JOURNAL SUPPLEMENTS of April 23rd and 30th and June 25th. It is hoped that every effort will be made to attend in order to instruct the representatives.

Correction.—In the list of subscriptions and donations to the B.M.A. Charities Fund, published in the SUPPLEMENT of June 18th (p. 241), it should have been stated that the sum of £11 10s. from Dr. J. B. Naden was on behalf of the Warrington Division.

Meetings of Branches and Divisions.

EDINBURGH BRANCH.

THE annual meeting of the Edinburgh Branch was held in the Association's Scottish House on June 15th, when the president, Sir ROBERT PHILIP, was in the chair.

The report of the Branch Council, including the annual reports of the Branch and Divisions, were presented by Dr. JOHN STEVENS, and Dr. GUTHRIE submitted the financial statement, which showed a satisfactory balance. On the motion of the PRESIDENT the reports were approved.

The PRESIDENT, in the name of the Branch, thanked Dr. Guthrie, on his retiral from the office of treasurer, for his services to the Branch.

On the election of office-bearers the PRESIDENT announced that as no other nominations had been received the members nominated by the Branch Council were duly elected.

On vacating the chair Sir ROBERT PHILIP expressed his thanks for the help and kindness he had received during his term of office, particularly from the secretary, Dr. Stevens, whom he called on to take his place as president.

Dr. STEVENS expressed his sense of the honour conferred on him by the Branch, and moved a vote of thanks to the retiring president for his services, which was enthusiastically carried.

Dr. STEVENS expressed the indebtedness of all members to Mr. Jardine for his work in organizing the clinical meetings.

It was intimated that Dr. Stevens had been again elected to represent the Edinburgh and Fife Branches on the Council of the Association for 1927-28. Mr. Pirie Watson was elected to the board of the Queen Mary Nursing Home. The PRESIDENT, in a few words, referred to the proceedings of the Scottish Committee. Subject to his acceptance, Dr. Nasmyth was unanimously appointed a member of the Branch Council.

In reply to Dr. ROSE, who asked if the Branch had adopted any policy regarding the redrafted venereal diseases clause of the Edinburgh Corporation Provisional Order, the PRESIDENT stated that the matter had been referred to Dr. Drever, the Scottish Medical Secretary.

SURREY BRANCH: GUILDFORD DIVISION.

A COMBINED meeting of the Guildford Division and the Southern Counties Branch of the Veterinary Medical Association was held at Guildford on May 19th.

Discussion on Clean Milk.

Mr. FREDERICK HOBDAY, F.R.C.V.S., in opening a discussion on clean milk and its production, emphasized the fact that the purchase of adequate apparatus benefited the small farmer as much as the large concerns and was a financial saving. He commended the suggestions of Dr. Gibbs Smith regarding contamination due to the soiling of bottles through dust, and the opening of bottles by pressure on the paper disc, by which method dirt was likely to fall into the milk. The narrow neck and grooves made the bottles difficult to clean and were thus a source of danger. He looked forward to the time when a cheap container which could be destroyed after being used once would be available. Mr. Hobday deplored the apathy of the public, and hoped that fuller education would be possible by means of lectures and instruction from medical and veterinary officers.

Dr. NATHAN RAW, in referring to tuberculosis, said that a tour of inspection in all the larger cities of America convinced him that pasteurization was the best means of securing clean milk. He called attention to the very small number of cases of surgical tuberculosis in New York.

Mr. MALE remarked that the question of cleanliness was not a matter of elaborate sheds, but was largely influenced by financial considerations on the part of the landlord and by weather conditions, because on a very cold morning or a hot afternoon the cowman was disinclined to take precautions. There was also the trouble of cleaning the cows both morning and night; much, however, was being done in this direction and should be encouraged.

Dr. GIBBS SMITH spoke of the dirtiness of bottles, the difficulty of cleaning them, and the prevalence of carelessness in seeing that they were cleaned before refilling. He disagreed with pasteurization, and believed there was a big difference between fresh clean milk and pasteurized milk.

Dr. HOWELL spoke in favour of pasteurization. He condemned the illegal practice of bottling milk in the street, which was still extensively practised. In his opinion big companies had an advantage over the small dealers on account of their greater facilities for precautions.

Mr. MADDOCK referred to the experimental work carried on at Reading, and pointed out that they were only on the fringe of the subject and there was much more to be discovered. Though sterilization might kill the bacteria, he asked, What about the toxins they produced?

Mr. TUSTIN, who represented the commercial side, drew attention to the supervision exercised under the advice of veterinary and medical officers. He emphasized the necessity for the education of the public in the care of the outside of the bottles and the caps. He agreed with Dr. Raw on the question of pasteurization.

Mr. LITTLE advocated the free examination of cows and milk by skilled persons at frequent intervals.

Mr. ROBERTS spoke of the indiscriminate sale of tuberculin, and pointed out that it was quite easy for a dishonest farmer to inject suspect cows a week before the veterinary inspection, in order to make the veterinary test negative, and thus defeat the inspection. In Holland it was punishable to sell tuberculin to unqualified persons; he wished the same law applied to England.

Commander WATT suggested that contamination occurred between the teat and the pail, which he considered could be avoided by the greater use of mechanical milkers, and he advocated the greater use of these appliances. He pointed out that milking was the most tedious part of a cowman's work, and suggested that mechanical milking would lead to a better type of men seeking such occupation.

Dr. WATT was not certain that pasteurization had no effect on the nutritional qualities of the milk. He emphasized the importance of drinking fresh milk, since milk that had been standing for a day in warm weather had an enormously increased bacterial content.

Dr. JEPSON (Byfleet) suggested that insured persons should have opportunity of attending lectures by experts on this important subject.

A "SMALL FARMER" said he had, by his own efforts and for his own satisfaction, reached a standard of cleanliness above that of "Grade A." He had refused to apply for a licence, because he did not see why he should pay £5 to the Government in addition to the trouble and expense incurred in order to reach his standard. When he had delivered comparatively dirty warm milk rich in cream in his early days he received nothing but praise from his customers, but now, when he delivered cooled milk not so rich in cream, he had many complaints. Another speaker said he preferred the danger from fresh milk in hot weather to milk which had been altered by pasteurization. By advocating this he had diminished the incidence of infantile diarrhoea in his district.

A vote of thanks was accorded to Mr. Hobday for his instructive and interesting address.

NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, EDINBURGH, 1927.

Married Medical Women.

By BISHOP AUCKLAND: That the Representative Body seriously deprecates the recent action of the Durham County Council in dismissing one of its women medical officers from its staff on the ground of her recent marriage, and is of opinion that if marriage is to be a cause for dismissal this should be stated at the time of appointment.

Treatment of Early Stage Mental Disease.

By BELFAST: That the recommendation contained in para. 169 of the Annual Report of Council be referred back to the Council.
